

GLOBAL FOREST RESOURCES ASSESSMENT 2015

COUNTRY REPORT

Grenada

Rome, 2014

FAO, at the request of its member countries, regularly monitors the world's forests and their management and uses through the Global Forest Resources Assessment (FRA). This country report is prepared as a contribution to the FAO publication, the Global Forest Resources Assessment 2015 (FRA 2015).

The content and the structure are in accordance with the recommendations and guidelines given by FAO in the document Guide for country reporting for FRA 2015 (<http://www.fao.org/3/a-au190e.pdf>). These reports were submitted to FAO as official government documents.

The content and the views expressed in this report are the responsibility of the entity submitting the report to FAO. FAO may not be held responsible for the use which may be made of the information contained in this report.

TABLE OF CONTENTS

Report preparation and contact persons.....	4
1. What is the area of forest and other wooded land and how has it changed over time?	5
2. What is the area of natural and planted forest and how has it changed over time?	17
3. What are the stocks and growth rates of the forests and how have they changed?	22
4. What is the status of forest production and how has it changed over time?	29
5. How much forest area is managed for protection of soil and water and ecosystem services?	34
6. How much forest area is protected and designated for the conservation of biodiversity and how has it changed over time?	39
7. What is the area of forest affected by woody invasive species?	42
8. How much forest area is damaged each year?	45
9. What is the forest area with reduced canopy cover?	49
10. What forest policy and regulatory framework exists to support implementation of sustainable forest management SFM?	50
11. Is there a national platform that promotes stakeholder participation in forest policy development?	52
12. What is the forest area intended to be in permanent forest land use and how has it changed over time?	53
13. How does your country measure and report progress towards SFM at the national level?	56
14. What is the area of forest under a forest management plan and how is this monitored?	58
15. How are stakeholders involved in the management decision making for publicly owned forests?	60
16. What is the area of forest under an independently verified forest certification scheme?	61
17. How much money do governments collect from and spend on forests?	63
18. Who owns and manages the forests and how has this changed?	65
19. How many people are directly employed in forestry?	69
20. What is the contribution of forestry to Gross Domestic Product (GDP)?	71
21. What is forest area likely to be in the future	72

Report preparation and contact persons

Introductory Text

Place an introductory text on the content of this report

The Global Forest Resources Assessment (FRA) is of fundamental importance in the management of global forest resources and is certainly no exception in the Grenada context. Not only does FRA provide valuable information pertaining to the present state of resources, but it also shows trends in use, depletion and expansion. Such data can be use as a tool to derive management strategies to address problems facing the particular resources.

The assessment is quite timely and crucial for Grenada, in that the data obtained can be used as a bench mark particularly for comparative analysis of our forest resources. Hurricane Ivan and Emily (2004 and 2005 respectively), seriously devastated our island causing damage to approximately ninety percent of our forest resources. FRA now presents the opportunity to collect data that can help to guide management decision, determine forest recovery and expansion rates. Global FRA also makes it possible for easy information shearing on the state of forest around the world.

Most of the information provided in this report, is based on estimates that more or less reflect the real situation. However, there is a desperate need for reliable, up-to-date and accurate information on our forest resource. In this regard, technologies including advanced GIS / remote sensing and field assessment are of paramount importance. Additionally, training and mechanisms to provide financial support to facilitate FRA for Small Island Developing States (SIDS) such as Grenada should be considered in the interest of sustainable Global Forest Assessment.

Desk Study?

Check "yes" if this survey is a Desk Study, "no" otherwise	
Desk Study?	yes

1. What is the area of forest and other wooded land and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

1.1 Categories and definitions

Category	Definition
Forest	Land spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of more than 10 percent or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use.
Other wooded land	Land not classified as "Forest" spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of 5-10 percent or trees able to reach these thresholds ; or with a combined cover of shrubs bushes and trees above 10 percent. It does not include land that is predominantly under agricultural or urban land use.
Other land	All land that is not classified as "Forest" or "Other wooded land".
...of which with tree cover (<i>sub-category</i>)	Land considered as "Other land", that is predominantly agricultural or urban lands use and has patches of tree cover that span more than 0.5 hectares with a canopy cover of more than 10 percent of trees able to reach a height of 5 meters at maturity. It includes bothe forest and non-forest tree species.
Inland water bodies	Inland water bodies generally include major rivers, lakes and water reservoirs.
Forest expansion	Expansion of forest on land that, until then, was not defined as forest.
...of which afforestation (<i>sub-category</i>)	Establishment of forest through planting and/or deliberate seeding on land that, until then, was not defined as forest.
...of which natural expansion of forest (<i>sub-category</i>)	Expansion of forests through natural succession on land that, until then, was under another land use (e.g. forest succession on land previously used for agriculture).
Deforestation	The conversion of forest to other land use or the longterm reduction of the tree canopy cover below the minimum 10 percent threshold.
...of which human induced (<i>sub-category</i>)	Human induced conversion of forest to other land use or the permanent reduction of the tree canopy cover below the minimum 10 percent threshold.
Reforestation	Natural regeneration or re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.
...of which artificial reforestation (<i>sub-category</i>)	Re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.

1.2 National data

1.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	FAOSTAT	Country area	2005	Secondary data source

2	Paterson, G. 2000. Grenada Country Report: Forestry outlook study for the Caribbean. In: Proceedings of Sub-regional Workshop on Data Collection and Outlook Effort for Forestry in the Caribbean, Port-of-Spain, Trinidad and Tobago, 21-25 February 2000. FAO, Rome	Forest area	1991	Secondary data source. Author cited the Caribbean Conservation Association as source for the data
3	Purey-Cust, J.R. 1992. Grenada National Forestry Action Programme report, FAO, Rome.	Forest area	1982	Secondary data source
4	Gumbs, F.A.. 1992. Report on Land Use Watershed Management. Grenada. Tropical Forestry Action Plan. FAO, Rome.	Forest Class definitions	1992	N/A

1.2.2 Classification and definitions

National class	Definition
Mountain rain forest	Montane thicket was replaced by clumps or groves of Mountain Cabbage (<i>Euterpe</i> sp) palms, sometimes 60-78 feet high and far overtopping the stunted forest. Montane Thicket in Grenada covered the summit of the main watershed from Mount Qua Qua south towards Mount Sinai and lesser ridge tops in the area. <i>Micropholis chrysiphyloides</i> was dominant; nearly all the big trees are of this species, some of them up to six feet in girth. Composition was probably affected by fellings in the past as in the case of the Rain Forest. There was virtually no shrub layer. Epiphytes seemed to be confined to small orchids and ferns, and while there were few climbers, the forest was extremely mossy. Ground vegetation was knee-high and thick beneath typical Montane Thicket, consisting of seedlings, ferns, and razor grass.
Closed evergreen rainforest	Including the lower montane rain forest and the primary and secondary rain forest.
Moist deciduous and semi-deciduous forest	Some low hills near the coastlines were covered with a degraded dry scrub woodland, cactus and acacia bush which probably represented the remnants of a narrow belt of
Abandoned cropland/ grazing land	No definition provided

Scrub/cactus vegetation	This forest types includes; Deciduous Seasonal forest/ Cactus Scrub. Some low hills near the coastlines were covered with a degraded dry scrub woodland, cactus scrub and acacia bush wich probably represented the remnants of a natural narrow belt of deciduous seasonal forest formation wich originally grew here.
Mangrove swamp	Small areas of mangrove swamps: red mangrove, black mangrove, white mangrove and button mangrove.
Inland swamp	No definition provided

1.2.3 Original data

<p>Note comment to 1.2.2</p> <p>According to Helmer et.al (2008), the forest and shrubland classes are designated to the formation level. Formations are adapted from Areces-Malea et al. (1999), who classify Caribbean vegetation according to standards of the US Federal Geographic Data Committee (FGDC 1997)</p> <p>.</p> <hr/> <p>Areces-Mallea, A., A. S. Weakley, X. Li, R. G. Sayre, J. D. Parrish, C. V. Tipton, and T. Boucher. 1999. A guide to Caribbean vegetation types: classification systems and descriptions. Washington, D.C.: The Nature Conservancy</p> <p>FGDC. 1997. National vegetation classification standard, Federal Geographic Data Committee, Vegetation Subcommittee. <i>FGDC-STD-005</i>. Reston, Virginia: U.S. Geological Survey.</p> <hr/> <p>1982</p>	
National Classification	Area in Acres
Mountain rain forest	4 170
Closed evergreen rainforest	5 630
Moist deciduous and semi-deciduous forest	4 330

Forest Dry Deciduous	1869.75
Forest Semi Deciduous	580.68
Forest Evergreen and Seasonal	19.62
Agriculture Woody	18.54
TOTAL Grenadines	3798.36

Afforestation and reforestation activities are insignificant in Grenada.

1.3 Analysis and processing of national data

1.3.1 Adjustment

According to FAOSTAT, the country area and land area is 34 000 hectares, with zero inland water.

The 2001 data had therefore to be calibrated. Calibration was done on basis of land area, where national data had a total of 35 393 hectares. The calibration factor is 0.96065. This gives the following calibrated data for 2001:

FRA 2010 Category	Hectares
Forest	16993
Other Wooded Land	1227
Other land	15780
... of which with tree cover	290
Inland water	0
TOTAL	34000

1.3.2 Estimation and forecasting

Earlier data indicate that no substantial changes in forest cover were taking place. Hurricanes Ivan (2004) and Emily (2005) caused severe damage to the forests. However, these damages did not change the land use and forest cover change has therefore been assumed constant.

1.3.3 Reclassification

1982					
National Classification	Forest	Other Wooded Land	Other land		
Mountain rain forest	100%				
Closed evergreen rainforest	100%				
Moist deciduous and semi-deciduous forest		100%			
Abandoned ruinate cropland/ grazing land				100%	
Scrub/cactus vegetation		100%			
Mangrove swamp	100%				
Inland swamp				100%	
1991					
National Classification	Forest	Other Wooded land	Other land		
Forest	100%				
Woodland and scrub		100%			
2001					
Grenada - Main island					

Landcover class name	Forest	Other wooded land	Other land	OL w. tree cover	Water
High-Medium Density Urban or Built-up Land			100%		
Low Density Built-up Land (Rural or Residential)			100%		
Herbaceous Agriculture - Cultivated Lands			100%		
Nutmeg and Mixed Woody Agriculture			100%		
Coconut Palm and Mixed Woody Agriculture (Cacao, Banana, other)			100%	100%	
Pasture, Hay or Inactive Agriculture			100%		
Golf Course			100%		
Drought Deciduous Open Woodland		100%			
Deciduous, Evergreen Coastal and Mixed Forest or Shrubland, with or without succulents	50%	50%			

Semi-Deciduous Forest (includes Semi-Evergreen Forest)	100%				
Seasonal Evergreen and Evergreen Forest	100%				
Sierra Palm, Transitional and Tall Cloud Forest	100%				
Elfin and Sierra Palm Cloud Forest	100%				
Emergent Wetland			100%		
Mangrove	100%				
Quarries			100%		
Coastal Sand and Rock			100%		
Water - Permanent					100%

Grenada - Grenadines					
Landcover class name	Forest	Other wooded land	Other land	OL w. tree cover	Water
Water					100%
Barren			100%		
Beach White			100%		
Beach Black			100%		

Urban Light Density			100%		
Urban High Density			100%		
Agriculture Cultivated Land			100%		
Forest Dry Deciduous	100%				
Forest Semi Deciduous	100%				
Forest Evergreen and Seasonal	100%				
Agriculture Woody			100%	100%	

The reclassification gives the following table:

FRA Categories	Area (1000 hectares)		
	1982	1991	2001
Forest	4 156	4 148	17689
Other wooded land	2 978	3 980	1277
Other land	26 865	25 872	16427
... of which with tree cover			302
Inland water	0	0	77
TOTAL	34 000	34 000	35470

It can clearly be seen that the latest data set from 2001, which is also considered to be of best quality, is not comparable with previous data sets. The 2001 data set has therefore been selected as the basis for this and related reporting tables.

1.4 Data

2. What is the area of natural and planted forest and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

2.1 Categories and definitions

Term	Definition
Naturally regenerated forest	Forest predominantly composed of trees established through natural regeneration.
Naturalized introduced species	Other naturally regenerated forest where the tree species are predominantly non-native and do not need human help to reproduce/maintain populations over time.
Introduced species	A species, subspecies or lower taxon occurring outside its natural range (past or present) and dispersal potential (i.e. outside the range it occupies naturally or could occupy without direct or indirect introduction or care by humans).
Category	Definition
Primary forest	Naturally regenerated forest of native species where there are no clearly visible indications of human activities and the ecological processes are not significantly disturbed.
Other naturally regenerated forest	Naturally regenerated forest where there are clearly visible indications of human activities.
...of which of introduced species (<i>sub-category</i>)	Other naturally regenerated forest where the trees are predominantly of introduced species.
...of which naturalized (<i>sub-sub category</i>)	Other naturally regenerated forest where the trees are predominantly of naturalized introduced species.
Planted forest	Forest predominantly composed of trees established through planting and/or deliberate seeding.
...of which of introduced species (<i>sub-category</i>)	Planted forest where the planted/seeded trees are predominantly of introduced species.
Mangroves	Area of forest and other wooded land with mangrove vegetation.
...of which planted (<i>sub-category</i>)	Mangroves predominantly composed of trees established through planting.

3. What are the stocks and growth rates of the forests and how have they changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

3.1 Categories and definitions

Category	Definition
Growing stock	Volume over bark of all living trees with a minimum diameter of 10 cm at breast height (or above buttress if these are higher). Includes the stem from ground level up to a top diameter of 0 cm, excluding branches.
Net Annual Increment (NAI)	Average annual volume of gross increment over the given reference period less that of natural losses on all trees, measured to minimum diameters as defined for "Growing stock".
Above-ground biomass	All living biomass above the soil including stem stump branches bark seeds and foliage.
Below-ground biomass	All biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Dead wood	All non-living woody biomass not contained in the litter either standing lying on the ground or in the soil. Dead wood includes wood lying on the surface dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in above-ground biomass	Carbon in all living biomass above the soil including stem stump branches bark seeds and foliage.
Carbon in below-ground biomass	Carbon in all biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Carbon in dead wood	Carbon in all non-living woody biomass not contained in the litter, either standing, lying on the ground, or in the soil. Dead wood includes wood lying on the surface, dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in litter	Carbon in all non-living biomass with a diameter less than the minimum diameter for dead wood (e.g. 10 cm) lying dead in various states of decomposition above the mineral or organic soil.
Soil carbon	Organic carbon in mineral and organic soils (including peat) to a soil depth of 30 cm.

3.2 National data

3.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments

2	N/A	N/A	N/A	N/A
3	N/A	N/A	N/A	N/A
4	N/A	N/A	N/A	N/A

3.2.2 Classification and definitions

National class	Definition
N/A	N/A
N/A	N/A
N/A	N/A
N/A	N/A

3.2.3 Original data

Expert estimates (before 2004) indicate a growing stock approximately 55 m³ per hectare. The hurricanes in 2004 and 2005 severely destroyed the forests, and for 2005 and 2010 expert estimates of about 35 m³/ha and 45 m³/ha respectively have been used.

Data on growing stock were used as input for the biomass estimates.

Biomass data were used as input for the carbon estimates. Biomass was multiplied by 0.47 to obtain carbon.

3.3 Analysis and processing of national data

3.3.1 Adjustment

3.3.2 Estimation and forecasting

For biomass calculation, the following conversion factors were used:

BCEF: 2.5 (Between the classes (21-40 and 41-60))

R/S ratio 0.20

3.3.3 Reclassification

3.4 Data

Table 3a

4. What is the status of forest production and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

4.1 Categories and definitions

Term	Definition
Primary designated function	The primary function or management objective assigned to a management unit either by legal prescription documented decision of the landowner/manager or evidence provided by documented studies of forest management practices and customary use.
Non wood forest product (NWFP)	Goods derived from forests that are tangible and physical objects of biological origin other than wood.
Commercial value of NWFP	For the purpose of this table, value is defined as the commercial market value at the forest gate.
Category	Definition
Production forest	Forest area designated primarily for production of wood, fibre, bio-energy and/or non-wood forest products.
Multiple use forest	Forest area designated for more than one purpose and where none of these alone is considered as the predominant designated function.
Total wood removals	The total of industrial round wood removals and woodfuel removals.
...of which woodfuel	The wood removed for energy production purposes, regardless whether for industrial, commercial or domestic use.

Other general comments to the table

In general, available data are insufficient for making good estimates of forest designation. The given figures are just rough estimates.

5. How much forest area is managed for protection of soil and water and ecosystem services?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

5.1 Categories and definitions

Category	Definition
Protection of soil and water	Forest area designated or managed for protection of soil and water
...of which production of clean water (<i>sub-category</i>)	Forest area primarily designated or managed for water production, where most human uses are excluded or heavily modified to protect water quality.
...of which coastal stabilization (<i>sub-category</i>)	Forest area primarily designated or managed for coastal stabilization.
...of which desertification control (<i>sub-category</i>)	Forest area primarily designated or managed for desertification control.
...of which avalanche control (<i>sub-category</i>)	Forest area primarily designated or managed to prevent the development or impact of avalanches on human life assets or infrastructure.
...of which erosion, flood protection or reducing flood risk (<i>sub-category</i>)	Forest area primarily designated or managed for protecting communities or assets from the impacts of erosion riparian floods and landslides or for providing flood plain services.
...of which other (<i>sub-category</i>)	Forest area primarily designated or managed for other protective functions.
Ecosystem services, cultural or spiritual values	Forest area primarily designated or managed for selected ecosystem services or cultural or spiritual values.
...of which public recreation (<i>sub-category</i>)	Forest area designated or managed for public recreation.
...of which carbon storage or sequestration (<i>sub-category</i>)	Forest area designated or managed for carbon storage or sequestration.
...of which spiritual or cultural services (<i>sub-category</i>)	Forest area designated or managed for spiritual or cultural services.
...of which other (<i>sub-category</i>)	Forest area designated or managed for other ecosystem services.

8. How much forest area is damaged each year?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

8.1 Categories and definitions

Category	Definition
Number of fires	Number of fires per year
Burned area	Area burned per year
Outbreaks of insects	A detectable reduction in forest health caused by a sudden increase in numbers of harmful insects.
Outbreaks of diseases	A detectable reduction in forest health caused by a sudden increase in numbers of harmful pathogens, such as bacteria, fungi, phytoplasma or virus.
Severe weather events	Damage caused severe weather events, such as snow, storm, drought, etc.

9. What is the forest area with reduced canopy cover?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

Category	Definition
Reduction in canopy cover	Forest that has undergone a reduction of canopy cover of more than 20% between the years 2000 and 2010 within the forest canopy cover range of 30-80% as detected by the MODIS VCF sensor.

Table 9

Category	Area of forest with reduced canopy cover (000 ha)
Reduction in canopy cover	6.72

10. What forest policy and regulatory framework exists to support implementation of sustainable forest management SFM?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

10.1 Categories and definitions

Category	Definition
Policies supporting sustainable forest management	Policies or strategies that explicitly encourage sustainable forest management.
Legislation and regulations supporting sustainable forest management	Legislation and regulations that govern and guide sustainable forest management, operations and use.

10.2 National data

10.2.1 Data sources

13. How does your country measure and report progress towards SFM at the national level?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

13.1 Categories and definitions

Category	Definition
Forest area monitored under a national forest monitoring framework	Forest area monitored by a national monitoring framework or systems that provide measurement based periodic monitoring of forest extent and quality.
Forest reporting at national scale	National reporting of forest extent and characteristics that includes some measure of progress toward sustainable forest management.

13.2 National data

13.2.1 Data sources

14. What is the area of forest under a forest management plan and how is this monitored?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

14.1 Categories and definitions

Category	Definition
Forest area with management plan	Forest area that has a long-term documented management plan, aiming at defined management goals which is periodically revised
...of which for production (<i>sub-category</i>)	Forest management plan mainly focused on production
...of which for conservation (<i>sub-category</i>)	Forest management plan mainly focused on conservation
Monitoring of forest management plans	Government monitoring of forest management plan implementation conducted through field visits or audits of forest management plan performance

14.2 National data

16. What is the area of forest under an independently verified forest certification scheme?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

16.1 Categories and definitions

Category	Definition
FSC certification	Forest area certified under the Forest Stewardship Council certification scheme
PEFC certification	Forest area certified under the Programme for the Endorsement of Forest Certification scheme
Other international forest management certification	Forest area certified under an international forest management certification scheme with published standards and is independently verified by a third-party, excluding FSC and PEFC certification.
Certified forest area using a domestic forest management certification scheme	Area certified under a forest management certification scheme with published standards that are nationally recognized and independently verified by a thirdparty

16.2 Data

17. How much money do governments collect from and spend on forests?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

17.1 Categories and definitions

Category	Definition
Forest revenue	All government revenue collected from the domestic production and trade of forest products and services. For this purpose revenue include: <ul style="list-style-type: none"> • <u>Goods</u> : roundwood; sawnwood; biomass; woodbased panels; pulp and paper and non-wood forest products. • <u>Services</u> : including concession fees and royalties, stumpage payments, public timber sales revenue taxes and charges based on forest area or yield, taxes on domestic trade and export of forest products, special levies on forestry activities and payments into forest related funds, other miscellaneous inspection, licence and administrative fees levied by forest administrations, permit and licence fees for recreation and other forest related activities.
Public expenditure on forestry	All government expenditure on forest related activities.

18. Who owns and manages the forests and how has this changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

18.1 Categories and definitions

Category	Definition
Public ownership	Forest owned by the State or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at national scale (<i>sub-category</i>)	Forest owned by the State at the national scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at the sub-national government scale (<i>sub-category</i>)	Forest owned by the State at the sub-national government scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
Private ownership	Forest owned by individuals, families, communities, private cooperatives corporations and other business entities, private, religious and educational institutions, pension or investment funds, NGOs, nature conservation associations and other private institutions.
...of which individuals (<i>sub-category</i>)	Forest owned by individuals and families.
...of which private business entities and institutions (<i>sub-category</i>)	Forest owned by private corporations cooperatives companies and other business entities as well as private nonprofit organizations such as NGOs nature conservation associations, and private religious and educational institutions etc.
...of which local tribal and indigenous communities (<i>sub-category</i>)	Forest owned by a group of individuals belonging to the same community residing within or in the vicinity of a forest area or forest owned by communities of indigenous or tribal people The community members are coowners that share exclusive rights and duties and benefits contribute to the community development.
Unknown ownership	Forest area where ownership is unknown includes areas where ownership is unclear or disputed.
Categories related to management rights of public forests	Definition
Public Administration	The Public Administration (or institutions or corporations owned by the Public Administration) retains management rights and responsibilities within the limits specified by the legislation.
Individuals households	Forest management rights and responsibilities are transferred from the Public Administration to individuals or households through long-term leases or management agreements.
Private companies	Forest management rights and responsibilities are transferred from the Public Administration to corporations, other business entities private cooperatives, private nonprofit institutions and associations, etc., through long-term leases or management agreements.
Communities	Forest management rights and responsibilities are transferred from the Public Administration to local communities (including indigenous and tribal communities) through long-term leases or management agreements.
Other form of management rights	Forests for which the transfer of management rights does not belong to any of the categories mentioned above.
