Portugal

FAO, at the request of its member countries, regularly monitors the world's forests and their management and uses through the Global Forest Resources Assessment (FRA). This country report is prepared as a contribution to the FAO publication, the Global Forest Resources Assessment 2015 (FRA 2015).

The content and the structure are in accordance with the recommendations and guidelines given by FAO in the document Guide for country reporting for FRA 2015 (<http://www.fao.org/3/a-au190e.pdf>). These reports were submitted to FAO as official government documents.

The content and the views expressed in this report are the responsibility of the entity submitting the report to FAO. FAO may not be held responsible for the use which may be made of the information contained in this report.

TABLE OF CONTENTS

Report preparation and contact persons.....	4
1. What is the area of forest and other wooded land and how has it changed over time?	5
2. What is the area of natural and planted forest and how has it changed over time?	12
3. What are the stocks and growth rates of the forests and how have they changed?	17
4. What is the status of forest production and how has it changed over time?	27
5. How much forest area is managed for protection of soil and water and ecosystem services?	35
6. How much forest area is protected and designated for the conservation of biodiversity and how has it changed over time?	40
7. What is the area of forest affected by woody invasive species?	43
8. How much forest area is damaged each year?	46
9. What is the forest area with reduced canopy cover?	50
10. What forest policy and regulatory framework exists to support implementation of sustainable forest management SFM?	51
11. Is there a national platform that promotes stakeholder participation in forest policy development?	53
12. What is the forest area intended to be in permanent forest land use and how has it changed over time?	54
13. How does your country measure and report progress towards SFM at the national level?	57
14. What is the area of forest under a forest management plan and how is this monitored?	59
15. How are stakeholders involved in the management decision making for publicly owned forests?	62
16. What is the area of forest under an independently verified forest certification scheme?	64
17. How much money do governments collect from and spend on forests?	66
18. Who owns and manages the forests and how has this changed?	68
19. How many people are directly employed in forestry?	74
20. What is the contribution of forestry to Gross Domestic Product (GDP)?	77
21. What is forest area likely to be in the future	78

Question number 17 in not answered by now. If possible, will be answered in a near future

Desk Study?

Check "yes" if this survey is a Desk Study, "no" otherwise	
Desk Study?	no

1. What is the area of forest and other wooded land and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

1.1 Categories and definitions

Category	Definition
Forest	Land spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of more than 10 percent or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use.
Other wooded land	Land not classified as "Forest" spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of 5-10 percent or trees able to reach these thresholds ; or with a combined cover of shrubs bushes and trees above 10 percent. It does not include land that is predominantly under agricultural or urban land use.
Other land	All land that is not classified as "Forest" or "Other wooded land".
...of which with tree cover (<i>sub-category</i>)	Land considered as "Other land", that is predominantly agricultural or urban lands use and has patches of tree cover that span more than 0.5 hectares with a canopy cover of more than 10 percent of trees able to reach a height of 5 meters at maturity. It includes bothe forest and non-forest tree species.
Inland water bodies	Inland water bodies generally include major rivers, lakes and water reservoirs.
Forest expansion	Expansion of forest on land that, until then, was not defined as forest.
...of which afforestation (<i>sub-category</i>)	Establishment of forest through planting and/or deliberate seeding on land that, until then, was not defined as forest.
...of which natural expansion of forest (<i>sub-category</i>)	Expansion of forests through natural succession on land that, until then, was under another land use (e.g. forest succession on land previously used for agriculture).
Deforestation	The conversion of forest to other land use or the longterm reduction of the tree canopy cover below the minimum 10 percent threshold.
...of which human induced (<i>sub-category</i>)	Human induced conversion of forest to other land use or the permanent reduction of the tree canopy cover below the minimum 10 percent threshold.
Reforestation	Natural regeneration or re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.
...of which artificial reforestation (<i>sub-category</i>)	Re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.

1.2 National data

1.2.1 Data sources

References to sources of information	Variables	Years	Additional comments
--------------------------------------	-----------	-------	---------------------

1	6.º Inventário Florestal Nacional (6th National Forest Inventory – NFI6 - preliminary results)	Forest, OWL, inland water, other land, afforestation and deforestation	2010, 2005 and 1995	Mainland (continental territory). The NFI5 area data were collected in 2005. The field data were collected mainly in 2005, but also in 2006.
2	Inventário Florestal da Região Autónoma dos Açores (IFRAA) (Azores regional forest inventory)	Forest, OWL, inland water, other land.	2007	Azores inventory data collection is a continuous process. The reported data reference year is 2007.
3	1.º Inventário Florestal da Região Autónoma da Madeira (IFRAM1) (Madeira's regional forest inventory)	Forest, OWL, inland water, other land.	2004	The Madeira's area data were collected in 2004. The field data were collected in 2008

Sources:

Mainland territory (1995, 2005 and 2010):

All variables: NF15

Autonomous Region of Azores, (2007):

All variables: IFRAA

Autonomous Region of Madeira, (2004):

All variables: IFRAM1

Afforestation:

Territory	Year(s)	Total afforestation (ha)	Afforestation of Introduced species (ha)
Mainland Territory	1995-2005	370 713	131 856
	2005-2010	127 805	60 064

Deforestation:

Territory	Year(s)	Total desforestation (ha)	Desforestation of Introduced species (ha)
Mainland Territory	1995-2005	464 285	115 302
	2005-2010	184 844	51 287

1.3 Analysis and processing of national data

1.3.1 Adjustment

The total land area values reported in the different national data sets are not equal to the FAOstat figure reported at Appendix 2 of the *Guidelines for county reporting to FRA 2010* (9.209.000 hectares). Therefore, a slight calibration was done in those data sets.

The area of inland water bodies reported at Table 2.1 of the *Guidelines for county reporting to FRA 2010* (62 thousand hectares) was not considered for 2000 and 2010 because this figure underestimates the real value.

1.3.2 Estimation and forecasting

For the mainland territory, the year 1990 values were extrapolated from the NFI6 (1995) and NFI (2005). The year 2000 values were interpolated from the NFI6 (1995) and NFI6 (2005). The year 2015 forest forecasted values were extrapolated from the NFI (2005) and NFI6 (2010). The year 2015 inland water bodies figure was considered to be the same as 2010. Although Portuguese government has recently launched a new dam programme in which the building of 10 new water dams is planned, none of these is expected to be finished before 2015.

Both Azores and Madeira's territories have only one single forest inventory each (IFRAM1 for Madeira and IFRAA for Azores). Although other sources of information are available for past years, these are not completely consistent and are not compatible with FAO definitions. Therefore, for consistency reasons it was decided to adopt the forest inventory data of each territory for all reference years. Notice that Azores and Madeira's contributions for global figures of Portugal are relatively small, since these territories occupy only approximately 3% of the Portuguese total area.

1.3.3 Reclassification

1.4 Data

Table 1a

Categories		Area (000 hectares)

1.5 Comments

Category	Comments related to data definitions etc	Comments on the reported trends
Forest	N/A	N/A
Other wooded land	It was decided to consider all shrubland area as OWL as specified in the 2nd option of OWL FRA2015 definition (Terms and Definitions). Consequently, the 1990, 2000, 2005 and 2010 values were updated	N/A
Other land	N/A	N/A
Other land with tree cover	Not available	N/A

Inland water bodies	N/A	During the 1995-2010 period several water-dams were constructed (the Alqueva dam reservoir alone was responsible for 25 thousand hectares of new inland water area), and in result, the area of inland water bodies has largely increased.
Forest expansion	The NFI6 provided new accurate data as it comprehended the landcover classification of the same sample points for 1995, 2005 and 2010. This allowed to estimate the forest expansion area by comparing classifications of different years.	N/A
Deforestation	The NFI6 provided new accurate data as it comprehended the landcover classification of the same sample points for 1995, 2005 and 2010. This allowed to estimate the deforestation area by comparing classifications of different years.	N/A
Reforestation	Not available	N/A

Other general comments to the table

The NFI6 land use/cover data included the classification of 356 thousand sample points for 2010, 2005 and 1995, based on airborne imagery and field surveying. In result, the 1990, 2000 and 2005 national estimations have been updated in FRA2015.

2. What is the area of natural and planted forest and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

2.1 Categories and definitions

Term	Definition
Naturally regenerated forest	Forest predominantly composed of trees established through natural regeneration.
Naturalized introduced species	Other naturally regenerated forest where the tree species are predominantly non-native and do not need human help to reproduce/maintain populations over time.
Introduced species	A species, subspecies or lower taxon occurring <i>outside</i> its natural range (past or present) and dispersal potential (i.e. outside the range it occupies naturally or could occupy without direct or indirect introduction or care by humans).
Category	Definition
Primary forest	Naturally regenerated forest of native species where there are no clearly visible indications of human activities and the ecological processes are not significantly disturbed.
Other naturally regenerated forest	Naturally regenerated forest where there are clearly visible indications of human activities.
...of which of introduced species (<i>sub-category</i>)	Other naturally regenerated forest where the trees are predominantly of introduced species.
...of which naturalized (<i>sub-sub category</i>)	Other naturally regenerated forest where the trees are predominantly of naturalized introduced species.
Planted forest	Forest predominantly composed of trees established through planting and/or deliberate seeding.
...of which of introduced species (<i>sub-category</i>)	Planted forest where the planted/seeded trees are predominantly of introduced species.
Mangroves	Area of forest and other wooded land with mangrove vegetation.
...of which planted (<i>sub-category</i>)	Mangroves predominantly composed of trees established through planting.

2.2 National data

2.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	6.º Inventário Florestal Nacional (6th National Forest Inventory – NFI6 - preliminary results)	Primary forest, other naturally regenerated forest and planted forest	2010, 2005 and 1995	Mainland (continental territory). The NFI6 land use/cover data included the classification of 356 thousand sample points for 2010, 2005 and 1995, based on airborne imagery and field surveying . In result, the 1995 and 2005 national estimations have been updated

	Other naturally regenerated forest			16.5
	...of which of introduced species			16.5
	Planted forest			0.00
	...of which of introduced species			0.00
	Total			32.7

2.3 Analysis and processing of national data

2.3.1 Adjustment

A calibration was required to assure that the sum of areas of different categories matches the forest area reported in Table T1.

2.3.2 Estimation and forecasting

For the mainland territory, the years 2000 values were interpolated/extrapolated from the NFI6 (1995) and NFI5 (2005). The year 2015 forest forecasted values were extrapolated from the NFI6 (2005) and NFI6 (2010).

For Azores and Madeira's territories the respective inventory data were used for every reference years (as explained at Table 1).

2.3.3 Reclassification

Reclassification was made by forest tree species. A category was assigned for each forest tree species, depending on the territory considered (mainland, Azores and Madeira).

2.4 Data

Table 2a

Categories		Forest area (000 hectares)

Planted forest	N/A	N/A
Mangroves	N/A	N/A

Other general comments to the table

The NFI6 land use/cover data included the classification of 356 thousand sample points for 2010, 2005 and 1995, based on airborne imagery and field surveying. In result, the 2000 and 2005 national estimations have been updated in FRA2015.

3. What are the stocks and growth rates of the forests and how have they changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

3.1 Categories and definitions

Category	Definition
Growing stock	Volume over bark of all living trees with a minimum diameter of 10 cm at breast height (or above buttress if these are higher). Includes the stem from ground level up to a top diameter of 0 cm, excluding branches.
Net Annual Increment (NAI)	Average annual volume of gross increment over the given reference period less that of natural losses on all trees, measured to minimum diameters as defined for "Growing stock".
Above-ground biomass	All living biomass above the soil including stem stump branches bark seeds and foliage.
Below-ground biomass	All biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Dead wood	All non-living woody biomass not contained in the litter either standing lying on the ground or in the soil. Dead wood includes wood lying on the surface dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in above-ground biomass	Carbon in all living biomass above the soil including stem stump branches bark seeds and foliage.
Carbon in below-ground biomass	Carbon in all biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Carbon in dead wood	Carbon in all non-living woody biomass not contained in the litter, either standing, lying on the ground, or in the soil. Dead wood includes wood lying on the surface, dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in litter	Carbon in all non-living biomass with a diameter less than the minimum diameter for dead wood (e.g. 10 cm) lying dead in various states of decomposition above the mineral or organic soil.
Soil carbon	Organic carbon in mineral and organic soils (including peat) to a soil depth of 30 cm.

3.2 National data

3.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	MCPFE, 2003. State of Europe's Forests 2003	Forest growing stock	1984	Secondary data source based on NFI3. The NFI3 area data were collected in a 12 year period, but 1982 is considered to be the reference year. Field data were collected in a 5 year period, but 1984 is considered to be the reference year.

2	Inventário Florestal Nacional, 3. ^a Revisão. 2001. (4th National Forest Inventory - NFI4)	Forest growing stock	1998	Mainland (continental territory). The NFI4 area data were collected in 1995, while the field data were collected in 1997/1998.
3	5.º Inventário Florestal Nacional (5th National Forest Inventory – NFI5)	Forest growing stock, OWL growing stock, aboveground biomass	2005	Mainland (continental territory). The NFI5 area data were collected in 2005, while the field data were collected mainly in 2005 but also in 2006.
4	Inventário Florestal da Região Autónoma dos Açores (IFRAA) (regional forest inventory)	Forest growing stock	2007	Azores data has been collected and updated till 2007. Biomass values were not estimated in this inventory. Growing stock values were converted to biomass values.
5	1.º Inventário Florestal da Região Autónoma da Madeira (IFRAM1) (regional forest inventory)	Forest growing stock	2008	Madeira's area data were collected in 2004, while the field data were collected in 2008.

3.2.2 Classification and definitions

National class	Definition
Growing stock	Sum of the volume of all standing living trees. Includes: • All trees with DBH higher than zero; • Stem volume, including the top end, stump and bark. Excludes: • Volume of branches, roots and leaves; • Dead trees • Downed trees; • Trees outside the forest.
Growing stock of commercial species	Growing stock of forest species which have no specific-law that restricts its felling.
N/A	The Portuguese definition of above-ground biomass is identical to the FRA definition. There is no national definition for below-ground biomass and dead-wood biomass.
N/A	N/A

	... of which coniferous	1000 m ³	2008	1.81
	... of which broadleaved	1000 m ³	2008	4.09

Carbon:

The biomass values were used as data sources. Biomass values were used as original data.

3.3 Analysis and processing of national data

3.3.1 Adjustment

Calibration is not required.

3.3.2 Estimation and forecasting

The year 1990 figures were interpolated from the NFI3 (1984) and NFI4 (1998). In similar way, the year 2000 figures were interpolated from the NFI4 (1995) and NFI5 (2005).

The year 2010 forest forecasted figures were extrapolated from the NFI3 (1984), NFI4 (1998) and NFI5 (2005) figures.

Both Azores and Madeira's territories have only one single forest inventory each (IFRAM1 for Madeira and IFRAA for Azores). Although other sources of information are available for past years, these are not completely consistent and are not compatible with FAO definitions. Therefore, for consistency reasons it was decided to adopt the forest inventory data of each territory for all reference years. Notice that Azores and Madeira's contributions for global figures of Portugal are relatively small, since these territories occupy only approximately 3% of the Portuguese total area.

Azores and Madeira territories do not have data regarding the OWL growing stock. To estimate these variables, the mainland's average growing stock (per hectare) was used.

Biomass:

The forecasted values for 2010 were obtained assuming the same ratio biomass:growing stock of 2005.

Carbon:

Data was directly obtained by multiplying the biomass values by the default value of carbon fraction of aboveground forest biomass indicated at Table 5.2 of Appendix 5 of the FRA 2010 Guidelines document.

3.3.3 Reclassification

Reclassification is not required.

THE PRE-FILLED VALUES FOR GROWING STOCK REFER TO THE FOLLOWING THRESHOLD VALUES (SEE TABLE BELOW)

Item	Value	Complementary information
------	-------	---------------------------

Minimum diameter (cm) at breast height of trees included in growing stock (X)	0	Although there is a dbh threshold of 5/7.5 cm (depending on the specie) for measuring individual trees, volume of smaller trees (dbh<5/7.5 cm) is considered as well (smaller trees are counted and the correspondent average height is recorded for every sample plot).
Minimum diameter (cm) at the top end of stem for calculation of growing stock (Y)	0	The reported growing stock includes the volume of the top end of the stem.
Minimum diameter (cm) of branches included in growing stock (W)	N/A	The reported growing stock does not include the volume of branches.
Volume refers to above ground (AG) or above stump (AS)	AG	The reported growing stock includes the stump volume.

PLEASE NOTE THAT THE DEFINITION OF GROWING STOCK HAS CHANGED AND SHOULD BE REPORTED AS GROWING STOCK DBH 10 CM INCLUDING THE STEM FROM GROUND LEVEL UP TO A DIAMETER OF 0 CM, EXCLUDING BRANCHES.

3.5 Comments on growing stock biomass and carbon

Category	Comments related to data definitions etc	Comments on the reported trend
Total growing stock	N/A	N/A
Growing stock of broadleaved coniferous	N/A	N/A
Growing stock composition	The NFI5 distinguishes 10 different forest species/genders, while the NFI4 (1995) only distinguishes 9 (acacia spp. growing stock is reported in remaining broadleaved species). In order to be comparable to the NFI4 value, growing stock of acacia spp in 2005 was reported in the remaining broadleaved species as well.	N/A
Net annual increment	N/A	N/A

Above-ground biomass	For Azores forest inventory, above-ground biomass was not collected. For this territory, biomass values were estimated by converting growing stock to biomass values (BCEF were used). The reported above-ground biomass does not include the under storey biomass as it concerns to the tree biomass only. 1990 and 2000 DATA ESTIMATED.	The forecasted values for 2010 were obtained assuming the same ratio biomass:growing stock of 2005.
Below-ground biomass	Expansion factors to convert above-ground biomass to below-ground biomass were used. Values were collected from Table 5.3 of Appendix 5 of the FRA 2010 Guidelines document. 1990 and 2000 DATA ESTIMATED.	N/A
Dead wood	This variable can not be estimated since this kind of data is not collected in any of the Portuguese NFI.	N/A
Carbon in above-ground biomass	N/A	N/A
Carbon in below-ground biomass	N/A	N/A
Carbon in dead wood	N/A	N/A
Carbon in litter	N/A	N/A
Soil carbon	Soil depth na	N/A

Other general comments to the table

No updates were made in growing stock, biomass and carbon tables because new field data is not available at this moment. A new biometric data gathering campaign (field plots) will occur during 2014. The reported above-ground biomass values do not include the understory component as this information is not available.

4. What is the status of forest production and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

4.1 Categories and definitions

Term	Definition
Primary designated function	The primary function or management objective assigned to a management unit either by legal prescription documented decision of the landowner/manager or evidence provided by documented studies of forest management practices and customary use.
Non wood forest product (NWFP)	Goods derived from forests that are tangible and physical objects of biological origin other than wood.
Commercial value of NWFP	For the purpose of this table, value is defined as the commercial market value at the forest gate.
Category	Definition
Production forest	Forest area designated primarily for production of wood, fibre, bio-energy and/or non-wood forest products.
Multiple use forest	Forest area designated for more than one purpose and where none of these alone is considered as the predominant designated function.
Total wood removals	The total of industrial round wood removals and woodfuel removals.
...of which woodfuel	The wood removed for energy production purposes, regardless whether for industrial, commercial or domestic use.

4.3 Analysis and processing of national data

4.3.1 Adjustment

4.3.2 Estimation and forecasting

The year 1990 values were extrapolated from the NFI6 (1995) and NFI (2005). The year 2000 values were interpolated from the NFI6 (1995) and NFI6 (2005). The year 2015 forest forecasted values were extrapolated from the NFI (2005) and NFI6 (2010).

These values were finally interpolated to total national forest referred on tabela 1a), taking in consideration Açores, Madeira e Continental mainland.

4.3.3 Reclassification

For the mainland territory, the table T4a figures for the year 2010 were calculated, assuming IFN6 data (1995, 2005 e 2010):

- Pinus pinaster, Eucalyptus globulus and other coniferous stands (less Pinus pinea) belong to Production Forest categories

- Quercus stands, Pinus pinea, Castanea sativa, Ceratonia siliqua and other broadleaves stands belong to Multiple Use Forest categorie

5. How much forest area is managed for protection of soil and water and ecosystem services?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

5.1 Categories and definitions

Category	Definition
Protection of soil and water	Forest area designated or managed for protection of soil and water
...of which production of clean water (<i>sub-category</i>)	Forest area primarily designated or managed for water production, where most human uses are excluded or heavily modified to protect water quality.
...of which coastal stabilization (<i>sub-category</i>)	Forest area primarily designated or managed for coastal stabilization.
...of which desertification control (<i>sub-category</i>)	Forest area primarily designated or managed for desertification control.
...of which avalanche control (<i>sub-category</i>)	Forest area primarily designated or managed to prevent the development or impact of avalanches on human life assets or infrastructure.
...of which erosion, flood protection or reducing flood risk (<i>sub-category</i>)	Forest area primarily designated or managed for protecting communities or assets from the impacts of erosion riparian floods and landslides or for providing flood plain services.
...of which other (<i>sub-category</i>)	Forest area primarily designated or managed for other protective functions.
Ecosystem services, cultural or spiritual values	Forest area primarily designated or managed for selected ecosystem services or cultural or spiritual values.
...of which public recreation (<i>sub-category</i>)	Forest area designated or managed for public recreation.
...of which carbon storage or sequestration (<i>sub-category</i>)	Forest area designated or managed for carbon storage or sequestration.
...of which spiritual or cultural services (<i>sub-category</i>)	Forest area designated or managed for spiritual or cultural services.
...of which other (<i>sub-category</i>)	Forest area designated or managed for other ecosystem services.

N/A	N/A

5.2.3 Original data

--

5.3 Analysis and processing of national data

5.3.1 Adjustment

Portugal doesn't have forest stands specifically managed towards the targets above presented. Therefore, we consider that is adequate to consider that:

- "Forest area primarily designated or managed for coastal stabilization", the forested coastal area, including the dune sites.

- "Forest area primarily designated or managed for protecting communities or assets from the impacts of erosion riparian floods and landslides or for providing flood plain services", the forest area sites that have slope above 30% plus forest mountain areas (altitude above 800 meters) and forest installed to protect river and hidric lines, as well as public water reservoirs.

The above mentioned values are refered to mainland territory (continental).

On what concerns Azores and Madeira, a estimation of 28300 ha (Açores) and 16500 ha (Madeira), concerning forest for protection of soil and water, was added to "Protection of soil and water" total, along the period (1990 to 2015).

5.3.2 Estimation and forecasting

- "Forest area primarily designated or managed for coastal stabilization" - it is assumed that the this forest category is much stabilized along the last decades. So the value from 1990 to 2010 is the same and the trend to 2015 is also the same, because is not expected to have changes on this forest category.

5.3.3 Reclassification

8. How much forest area is damaged each year?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

8.1 Categories and definitions

Category	Definition
Number of fires	Number of fires per year
Burned area	Area burned per year
Outbreaks of insects	A detectable reduction in forest health caused by a sudden increase in numbers of harmful insects.
Outbreaks of diseases	A detectable reduction in forest health caused by a sudden increase in numbers of harmful pathogens, such as bacteria, fungi, phytoplasma or virus.
Severe weather events	Damage caused severe weather events, such as snow, storm, drought, etc.

8.2 National data

8.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments

8.2.2 Classification and definitions

National class	Definition
Number of fires of which forest area burned	Number of fires with burned forest area exclusively
Area damaged by Pinewood Nematode (PWN) / <i>Bursaphelenchus xylophilus</i>	Area of coniferous stands damaged by PWN
Area damaged by <i>Gonipterus</i> spp.	Area of damaged Eucalyptus stands
N/A	N/A

8.2.3 Original data

8.3 Analysis and processing of national data

8.3.1 Adjustment

8.3.2 Estimation and forecasting

8.3.3 Reclassification

On what concerns PWN, in 2005, Portugal has submitted 519 000 hectares which reflected the territorial area with intervention (Setubal Peninsula and Centro) where disease showed up.

In 2010, the area now submitted is 193.000 hectares which reflects the area of coniferous stands damaged by PWN.

In 2005, the area of coniferous stands damaged by PWN was 47 335 hectares.

11. Is there a national platform that promotes stakeholder participation in forest policy development?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

11.1 Categories and definitions

Category	Definition
National stakeholder platform	A recognized procedure that a broad range of stakeholders can use to provide opinions, suggestions, analysis, recommendations and other input into the development of national forest policy.

11.2 National data

11.2.1 Data sources

	References to sources of information	Years	Additional comments
1	N/A	N/A	N/A
2	N/A	N/A	N/A
3	N/A	N/A	N/A
4	N/A	N/A	N/A

Table 11

Is there a national platform that promotes or allows for stakeholder participation in forest policy development?	yes
--	-----

11.3 Comments

Category	Comments related to data definitions etc
National stakeholder platform	N/A

Other general comments

Portugal has a Forest Consultive Council (Conselho Consultivo Florestal) which is a national platform that enhances stakeholder participation towards forest policy development.

12. What is the forest area intended to be in permanent forest land use and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

12.1 Categories and definitions

Category	Definition
Forest area intended to be in permanent forest land use	Forest area that is designated or expected to be retained as forest and is highly unlikely to be converted to other land use.
...of which permanent forest estate (<i>sub-category</i>)	Forest area that is designated by law or regulation to be retained as forest and may not be converted to other land use.

12.2 National data

12.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	6.º Inventário Florestal Nacional (6th National Forest Inventory – NFI6 - preliminary results)	Area of permanent forest estate and Forest area within protected areas	2005, 2010	Land cover and statistical information
2	Inventário Florestal da Região Autónoma dos Açores (IFRAA) (Regional Forest Inventory)	Area of permanent forest estate, Forest area within protected areas, Forest area under sustainable forest management, Primary designated function.	2007	Land cover and statistical information
3	1.º Inventário Florestal da Região Autónoma da Madeira (IFRAM1) (regional forest inventory)	Area of permanent forest estate, Forest area within protected areas, Forest area under sustainable forest management, Primary designated function.	2004	Land cover and statistical information
4	Rede Nacional de Matas e Perímetros Florestais - RNMPF (national network of forest areas managed by national and regional forest agencies)	Area of permanent forest estate, Forest area under sustainable forest management, Forest area with management plan, Primary designated function	N/A	Cartographic information

12.2.2 Classification and definitions

National class	Definition
----------------	------------

Area of permanent forest estate	Forest areas subjected to legislation that designates them to be retained as forest, disallowing land use conversions. For the mainland territory, these areas comprehend forest areas within Rede Nacional de Matas e Perímetros Florestais (national network of forest areas managed by national and regional forest agencies which are under the Forest Regime) and forest stands of <i>Quercus ilex</i> and <i>Quercus suber</i> (protected by a specific decree-law). For Azores and Madeira these areas comprehend forest areas managed by forest agencies and the primary forest areas.
Primary function of forest areas	The primary functions are established on a land cover basis and management/conservation status, defined by the national and regional forest agencies (Autoridade Florestal Nacional for the mainland territory, Direcção Regional dos Recursos Florestais for Azores and Direcção Regional de Florestas for Madeira).

Forest area with management plan	Tier 2
Percent of area under forest management plan that is monitored annually	Tier 2

Tier criteria

Category	Tier for status
Forest area with management plan	Tier 3 : Reports that describe national records 5 years old or less that contain long-term forest monitoring plans Tier 2 : Industry or other records indicating the presence of a long-term forest management plan Tier 1 : Other
Percent of area under forest management plan that is monitored annually	Tier 3 : Government documentation of monitoring extent Tier 2 : Reports from forest managers or other documental sources Tier 1 : Other

14.4 Comments

Category	Comments
Percent of area under forest management plan that is monitored annually	There is no legal requirement for the government to monitor forest management plans (annually or not). However, the main forestry operations require prior licensing and accordingly must be monitored / audited. In the case of forest management plans for the Forest Estates, these are subject to continuous monitoring.
Forest area with management plan	Forest areas with management plan comprehend forest areas which have a forest management plan approved by forest authorities. In this definition we include private forest areas with management plan and public forest estates under National Forest Authority management.
N/A	N/A

Other general comments

- Table 14b - 3 Social considerations community involvement - applied only to forest management areas of national estates, community areas and to areas integrated in Forest Intervention Zones (ZIF).
- It is somehow "reducing" to divide forest area between "conservation aimed" and "production aimed". This is emphasized on the mediterranean forest ecosystems where both functions are usually linked.

Nevertheless, an adaptation to Portuguese reality was made:

Conservation - forest stands inside national protected areas

Production - the rest of national forest stands (includes multifunction stands)

15. How are stakeholders involved in the management decision making for publicly owned forests?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

15.1 Categories and definitions

Category	Definition
Stakeholder involvement	Stakeholder involvement is defined as significant inputs into at least one aspect of forest management at the operational scale

Table 15

Please indicate the type of stakeholder involvement in forest management decision making required in your country	
1. Planning phase	yes
2. Operations phase	no
3. Review of operations	no

Tiers

Category	Tier for status
Type of stakeholder inputs	Tier 3

Tier criteria

Category	Tier for status
Type of stakeholder inputs	Tier 3 : Government (national or sub-national) documentation of stakeholder inputs Tier 2 : Government (national or subnational) requirement but stakeholder inputs not documented Tier 1 : Other

15.2 Comments

Category	Comments
N/A	N/A
N/A	N/A
N/A	N/A

Other general comments

All public forest areas ought to have a forest management plan (PGF) and are submitted to a public consultation process before being approved. In this phase, it is supposed that stakeholders state their opinion about PGF.

16. What is the area of forest under an independently verified forest certification scheme?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

16.1 Categories and definitions

Category	Definition
FSC certification	Forest area certified under the Forest Stewardship Council certification scheme
PEFC certification	Forest area certified under the Programme for the Endorsement of Forest Certification scheme
Other international forest management certification	Forest area certified under an international forest management certification scheme with published standards and is independently verified by a third-party, excluding FSC and PEFC certification.
Certified forest area using a domestic forest management certification scheme	Area certified under a forest management certification scheme with published standards that are nationally recognized and independently verified by a thirdparty

International forest management certification	Tier 3
Domestic forest management certification	N/A

16.3 Comments

Category	Comments related to data definitions etc
Certified forest area using an international forest management certification scheme	N/A
Domestic forest management certification	N/A

Other general comments

For the time being, there are no domestic forest management certification schemes.

Annual values provided by FSC and PEFC are based on reports for July in each year. Values change from month to month which is why July was used for all reports.

17. How much money do governments collect from and spend on forests?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

17.1 Categories and definitions

Category	Definition
Forest revenue	All government revenue collected from the domestic production and trade of forest products and services. For this purpose revenue include: <ul style="list-style-type: none"> • <u>Goods</u> : roundwood; sawnwood; biomass; woodbased panels; pulp and paper and non-wood forest products. • <u>Services</u> : including concession fees and royalties, stumpage payments, public timber sales revenue taxes and charges based on forest area or yield, taxes on domestic trade and export of forest products, special levies on forestry activities and payments into forest related funds, other miscellaneous inspection, licence and administrative fees levied by forest administrations, permit and licence fees for recreation and other forest related activities.
Public expenditure on forestry	All government expenditure on forest related activities.

18. Who owns and manages the forests and how has this changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

18.1 Categories and definitions

Category	Definition
Public ownership	Forest owned by the State or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at national scale (<i>sub-category</i>)	Forest owned by the State at the national scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at the sub-national government scale (<i>sub-category</i>)	Forest owned by the State at the sub-national government scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
Private ownership	Forest owned by individuals, families, communities, private cooperatives corporations and other business entities, private, religious and educational institutions, pension or investment funds, NGOs, nature conservation associations and other private institutions.
...of which individuals (<i>sub-category</i>)	Forest owned by individuals and families.
...of which private business entities and institutions (<i>sub-category</i>)	Forest owned by private corporations cooperatives companies and other business entities as well as private nonprofit organizations such as NGOs nature conservation associations, and private religious and educational institutions etc.
...of which local tribal and indigenous communities (<i>sub-category</i>)	Forest owned by a group of individuals belonging to the same community residing within or in the vicinity of a forest area or forest owned by communities of indigenous or tribal people The community members are coowners that share exclusive rights and duties and benefits contribute to the community development.
Unknown ownership	Forest area where ownership is unknown includes areas where ownership is unclear or disputed.
Categories related to management rights of public forests	Definition
Public Administration	The Public Administration (or institutions or corporations owned by the Public Administration) retains management rights and responsibilities within the limits specified by the legislation.
Individuals households	Forest management rights and responsibilities are transferred from the Public Administration to individuals or households through long-term leases or management agreements.
Private companies	Forest management rights and responsibilities are transferred from the Public Administration to corporations, other business entities private cooperatives, private nonprofit institutions and associations, etc., through long-term leases or management agreements.
Communities	Forest management rights and responsibilities are transferred from the Public Administration to local communities (including indigenous and tribal communities) through long-term leases or management agreements.
Other form of management rights	Forests for which the transfer of management rights does not belong to any of the categories mentioned above.

18.2 National data

18.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	Rede Nacional de Matas e Perímetros Florestais - RNMPF (national network of forest areas managed by national and regional forest agencies)	Area of Forest land ownership (mainland territory)	2010	Land cover information
2	Boletim estatístico da CELPA 2010 (pulp industry companies statistics)	Area of Forest land ownership (mainland territory)	2010	N/A
3	6.º Inventário Florestal Nacional (6th National Forest Inventory – NFI6 - preliminary results)	Area of Forest land ownership (mainland territory)	2010, 2005, 1995	Land cover information
4	Internal statistics of DRRF (Azores regional forest authority)	Forest land ownership (Autonomous Region of Azores)	2007	Since there is no available data for other years, the 2007 land ownership relative distribution was applied to all the reference years.
5	Internal statistics of DRF (Madeira's regional forest authority)	Forest land ownership (Autonomous Region of Madeira)	2004	Since there is no available data for other years, the 2004 land ownership relative distribution was applied to all the reference years.

18.2.2 Classification and definitions

National class	Definition
The national classifications and definitions are equivalent to those being used by FRA 2010.	N/A
N/A	N/A
N/A	N/A
N/A	N/A

18.2.3 Original data

Territory	Category	Area (%)
Mainland territory	Reference year	2005
	Public ownership	1.50%

	Private ownership	98.5%
	...of which owned by individuals	88.9%
	...of which owned by private business entities and institutions	5.31%
	...of which owned by local communities	4.33%
	...of which owned by indigenous / tribal communities	0.00%
	Other types of ownership	0.00%
Autonomous Region of Azores	Reference year	2007
	Public ownership	0.7%
	Private ownership	99.3%
	...of which owned by individuals	71.7%
	...of which owned by private business entities and institutions	0.0%
	...of which owned by local communities	27.5%
	...of which owned by indigenous / tribal communities	0.0%
	Other types of ownership	0.0%
Autonomous Region of Madeira	Reference year	2004
	Public ownership	11.8%
	Private ownership	88.2%
	...of which owned by individuals	36.1%
	...of which owned by private business entities and institutions	0.0%
	...of which owned by local communities	52.0%
	...of which owned by indigenous / tribal communities	0.0%
	Other types of ownership	0.0%

18.3 Analysis and processing of national data

18.3.1 Adjustment

Calibration is not required because relative proportions were used. These values were multiplied by the total forest area of each reference year, which were already calibrated, as explained in Table 1 comments.

18.3.2 Estimation and forecasting

Estimation and forecasting was not required because relative proportions were used. These values were multiplied by the total forest area of each reference year, which were already estimated (interpolated for mid-years, between data-source years), as explained in Table 1 comments.

18.3.3 Reclassification

18.4 Data

Table 18a

Categories		Forest area (1000 hectares)			
		1990	2000	2005	2010
	Public ownership	52.8	54.1	54.4	98.28

Communities	N/A	N/A
Other	N/A	N/A

18.5 Comments

Category	Comments related to data definitions etc	Comments on the reported trend
Public ownership	N/A	Due to the implementation of a specific forest procedure, more forest estates under public ownership have been identified and thus taken in consideration on the 2010 statistics
Private ownership	N/A	N/A
Unknown ownership	N/A	N/A
Management rights	N/A	N/A

Other general comments to the table

The NFI6 land use/cover data included the classification of 356 thousand sample points for 2010, 2005 and 1995, based on airborne imagery and field surveying. In result, the 1990, 2000 and 2005 national estimations have been updated in FRA2015.

19. How many people are directly employed in forestry?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

19.1 Categories and definitions

Category	Definition
Full-time equivalents (FTE)	A measurement equal to one person working full-time during a specified reference period.
Employment in forestry	Employment in activities related to production of goods derived from forests. This category corresponds to the ISIC/NACE Rev. 4 activity A02 (Forestry and logging).

19.2 National data

19.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	ILO statistics of Employment in forestry, logging and related services, 2003	N/A	N/A	Employment in forestry, logging and related services (secondary data reported at FRA 2005)
2	Gabinete de Estratégia e Planeamento - SISED – Ministério do Trabalho e da Solidariedade Social – National employment statistics	N/A	2005	These statistics do not include workers related to part of the forest support services, as forest inventory, forest management, timber assessment and forest pest control. The national employment statistics do not provide data for these types of workers.
3	Gabinete de Estratégia e Planeamento (GEP), Ministério da Solidariedade, Emprego e Segurança Social (MSESS)/Strategy and Planning Office (SPO) Ministry of Solidarity, Employment and Social Security (MSESS)	N/A	2010	N/A
