Youth makes up roughly 1/5 of the population of developing and emerging economies. In Sub-Saharan Africa alone, more than 10 million new jobs per year will have to be created in rural areas in the next few decades to absorb the new entrants to the labour force.

There is a largely unexploited reservoir of employment opportunities in agriculture. Yet, the drudgery and poor remuneration associated with low-productivity family farming turn young people away from agriculture and make them more prone to migrate from rural areas. Maintaining interest in farming as a profession is vital to future food security and agricultural development.

Youth: Present and Future of Agriculture

Youth makes up roughly 1/5 of the population of developing and emerging economies. In Sub-Saharan Africa alone, more than 10 million new jobs per year will have to be created in rural areas in the next few decades to absorb the new entrants to the labour force.

There is a largely unexploited reservoir of employment opportunities in agriculture. Yet, the drudgery and poor remuneration associated with low-productivity family farming turn young people away from agriculture and make them more prone to migrate from rural areas. Maintaining interest in farming as a profession is vital to future food security and agricultural development.

FAO support in Members in developing a strong enabling environment in which young people can thrive and seize current and future farm and non-farm decent rural employment opportunities.
