RINDERPEST IS ERADICATED BUT NOT FORGOTTEN

It is absolutely essential that we remain vigilant and take prompt action to investigate any cattle disease event that resemble rinderpest.

If you suspect Rinderpest, REPORT it immediately to the official Veterinary Service office!

WHAT WAS RINDERPEST?
RINDERPEST WAS A DEVASTATING INFECTIOUS DISEASE THAT AFFECTED CATTLE, BUFFALOES AND SEVERAL WILD SPECIES

Over millennia, periodic outbreaks killed millions of cattle in Africa, Asia, Middle East and Europe. After more than a century of hard work, rinderpest was declared globally eradicated in 2011. However, we need to make sure it never comes back.

WHAT ARE THE CLINICAL SIGNS OF RINDERPEST?

A suspected case of rinderpest shows the “4Ds”: DEPRESSION, DISCHARGES, DIARRHOEA & DEATH, together with fever and/or mouth lesions.

1. DEPRESSION
2. DISCHARGE
3. DIARRHOEA
4. DEHYDRATION & DEATH

Necrosis and erosion of the upper gums and dental pad

FEVER AND DEHYDRATION
DIARRHOEA OR DYSENTERY
DISCHARGE FROM EYES, NOSE AND MOUTH
SORES IN MOUTH FOUL BREATH
WHAT SHOULD YOU DO IF YOU SUSPECT RINDERPEST?

**STEP 1**
Immediately isolate the affected animal. Don’t let them move from where they are.

**STEP 2**
Immediately report to veterinary authorities!

**STEP 3**
Collect information from livestock holders on the outbreaks.

**STEP 4**
Prepare a written report of the suspected outbreak to provide to veterinary authorities for further investigations. The authorities should dispatch well-trained investigation teams as a matter of urgency.

SAFEGUARD YOUR COUNTRY AND THE WORLD FROM RINDERPEST!
