Rome, 1993
This document was prepared under the FAO Fisheries Department Regular Programme in the Marine Resources Service of the Fishery Resources and Environment Division. It is the sixteenth worldwide species catalogue in the FAO Fisheries Synopsis series.

The serranid subfamily Epinephelinae is important in commercial, artisanal, and sport fisheries of tropical and subtropical seas. However, detailed fishery information is usually not available, largely because of the difficulty in correctly identifying species. This difficulty is because of past taxonomic confusion, the similarity of colour pattern of some species, and ontogenetic changes and other variations in colour patterns. Therefore, this catalogue is timely as an accurate and complete worldwide guide to the identification of groupers. It is intended to help fisheries workers gather statistics and examine aspects of their biology that will be useful for the management of this fishery resource. The authors of the catalogue have studied groupers for many years by examining countless specimens, including most types, in museums, markets, and underwater on reefs, throughout the world. They have authored numerous scientific articles on groupers and recently completed a revision of the Epinephelinae from the Indo-Pacific region which was published in "Indo-Pacific Fishes," Honolulu, Hawaii, No. 20, November, 1991. This publication was the source for most of the taxonomic and ecological information for species occurring in that region.

English FAO fish names proposed by the authors were established in consultation with J.S. Nelson, University of Alberta, Edmonton (Chairman, Committee on Common Names of Fishes, American Fisheries Society and American Society of Ichthyologists and Herpetologists). Official French names were created in consultation with J.-C. Quero, Institut Français de Recherche pour l'Exploitation de la Mer, la Rochelle. Spanish FAO names were adapted from the literature or translated from the English FAO names with the help of G. Burgos, Instituto Nacional de Investigación and Desarrollo Pesquero, Argentina.

In view of the importance of colour patterns as diagnostic characters for identification, colour plates for most species have been included.

ABSTRACT

This is the sixteenth issue in the FAO series of worldwide annotated and illustrated catalogues of major groups of organisms that enter marine fisheries. It contains the 159 species in 15 genera known from the serranid subfamily Epinephelinae, including one species new to science. There is an introductory section with general remarks on habitat and fisheries of the family, a glossary of technical terms, an illustrated key to each genus and all species, and a detailed account for all species. Species accounts include an illustration of each species, scientific and vernacular names, and information on habitat, biology, fisheries, size, relevant literature, and distribution. Following the species accounts are a list of nominal species in the subfamily, a table of species by major marine fishing areas, and colour plates. A list of all nominal species and their present allocations is given. The work is fully indexed and there is a comprehensive list of references to pertinent literature.
Acknowledgements

Many people have assisted with the preparation of this catalogue and our research on serranid fishes. We are particularly grateful to the artists: Elaine Heemstra (formerly Elaine Grant) and David Voorvelt, of the J.L.B. Smith Institute, and Paolo Lastrico, of the FAO Fisheries Department, for their excellent illustrations. Additional important contributions were the meticulous work of Joan Wright, P.C. Heemstra’s Research Assistant, and Helen A. Randall, Managing Editor of Indo-Pacific Fishes.

We are grateful for the financial support of the Food and Agriculture Organization of United Nations, the J.L.B. Smith Institute, and the South African Foundation for Research Development. For much administrative and editorial assistance we are indebted to Walter Fischer, Kent Carpenter, Corinna Sommer, and Wolfgang Schneider of the FAO Fisheries Department.

Other persons who have been particularly helpful are Charles Anderson, Foster Barn, Leonard J.V. Compagno, the late W.I. Follett, G. David Johnson, Rudie H. Kuiter, Sin-Che Lee, Edward Matama, Richard L. Pyle, Billy Ranchod, Helen A. Randall, Wolfgang Schneider, Robin Stobbs, and Arnold Y. Suzumoto.

We are grateful to the curators and technical staff of the museums that have loaned or donated specimens and radiographs and provided us with literature or information on specimens. In particular, we thank Douglass F. Hoese, Jeffrey M. Leis, Mark McGrouther, and John R. Paxton (Australian Museum, Sydney); Eugenia B. Böhlike and William Saul (Academy of Natural Sciences, Philadelphia); Alwyne Wheeler, Mandy Holloway, Nigel R. Merrett, and Gordon J. Howes (British Museum [Natural History], London); William N. Eschmeyer, Tomio Iwamoto, Pearl Sonoda, David Catania, and Alexandra Snyder (California Academy of Sciences, San Francisco); Mark Leiby (Florida Department of Natural Resources, St. Petersburg); Barry Chernoff, Mary Anne Rogers, and Karin Dahl (Field Museum of Natural History, Chicago); William D. Anderson, Jr (Grice Marine Biological Laboratory, College of Charleston, Charleston); Adam Ben-Tuvia and Daniel Golani (Hebrew University, Jerusalem); Kunio Amaoko (Hokkaido University, Laboratory of Marine Zoology, Hokodate); Domingo Lloris and Jaime Rucabado (Instituto de Ciencias del Mar, Barcelona); J. Gosse (Institut Royal des Sciences Naturelles de Belgique, Brussels); Robert J. Lavenberg and Jeffrey A. Seigel (Los Angeles County Museum of Natural History, Los Angeles); Luis Arruda (Universidade de Lisboa, Museu Bocage, Lisboa); Karsten E. Hartel (Harvard University, Museum of Comparative Zoology, Cambridge); G.E. Maul and Manuel Biscoito (Museu Municipal do Funchal, Funchal); Marie Louise Bauchot and Martine Desoutter (Museum National d’Histoire Naturelle, Paris); Barbara Herzig (Naturhistorisches Museum, Wien); Keiichi Matsuura (National Science Museum, Tokyo), Helen K. Larson, Barry C. Russell, and Rex Williams (Northern Territory Museum of Arts and Sciences, Darwin); Shih-Chieh Shen (National Taiwan University, Taiwan); Jeff Johnson and R.J. McKay (Queensland Museum, Brisbane); M. Boeseman and M.J.P. van Oijen (Rijksmuseum van Natuurlijke Historie, Leiden); P.A. Hulley, L.J.V. Compagno, and Cedric Goliath (South African Museum, Cape Town); Richard H. Rosenblatt ( Scripps Institution of Oceanography, La Jolla); C. Richard Robins and Ken Lindeman (University of Miami, Rosenstiel School of Marine and Atmospheric Sciences, Miami); Douglas W. Nelson (University of Michigan, Museum of Zoology, Ann Arbor); Naercio Menezes (University of the South Pacific, Suva, Fiji Islands); Victor G. Springer, Susan L. Jewett, and Jeffrey T. Williams (National Museum of Natural History, Smithsonian Institution, Washington); Gerald R. Allen (Western Australian Museum, Perth); Jon Moore (Yale University, Peabody Museum, New Haven); Hans-Joachim Paepke (Universitat Humboldt, Museum fur Naturkunde, Berlin); Jørgen Nielsen (Kobenhavns Universitet, Zoologiska Museum, Copenhagen), and Masahiro Aizawa and Kenji Mochiusuki (University of Tokyo, University Museum, Tokyo).
