Acknowledgements

The Food and Agriculture Organization of the United Nations (FAO) and the International Fund for Agricultural Development (IFAD) Joint Secretariat of the UNDFF led by Marcela Villarreal (Director, Partnerships Division, FAO) and Ashwani K. Muthoo (Director, Global Engagement and Multilateral Relations, IFAD) would like to thank all those who contributed to the design of the Global Action Plan of the UN Decade of Family Farming 2019-2028.

Special thanks is extended to the International Steering Committee of the UN Decade of Family Farming for its strategic guidance and contributions in the development of the Action Plan.

Technical guidance was provided by Guilherme Brady (Head of Family Farming and Partnerships with the Civil Society Organizations Unit, FAO) and Torben Nilsson (Senior Global Engagement Specialist, Global Engagement and Multilateral Relations, IFAD).

The consultation and drafting process of the Global Action Plan was led by Anna Korzenszky (FAO) and Edoardo Calza Bini (FAO). Significant contributions were provided by Sara Hassan (FAO), Mario Acunzo (FAO), David Suttie (IFAD), Jeff Campbell (FAO), Jhony Zapata (FAO), Sophie Grouwels (FAO), Svea Senesie (FAO) and Anna Rappazzo (FAO). The support of Rodrigo Castañeda-Sepúlveda (FAO), Kayo Takenoshita (FAO), Manuel Claros Oviedo (FAO), Sarah D’Angelo (FAO) and Viola Paroli is here acknowledged.

Special thanks is extended to the global family farmer organizations, La Via Campesina, the World Farmers’ Organization and to the World Rural Forum for their commitment and continuous contributions. We particularly thank all the members of the FAO Technical Committee on the UN Decade on Family Farming (comprised of the Strategic Programme Teams and Regional Offices of FAO), as well as IFAD’s Global Engagement and Multilateral Relations Division, the Research and Impact Assessment Division, and the Sustainable Production, Markets and Institutions Division who provided regular feedback on the Global Action Plan during its development. We also thank FAO’s Family Farming and Partnerships with Civil Society Organizations Unit, the Responsible Agricultural Investment Team, the Policy Economics and Institutions Branch of the Fisheries and Aquaculture Department, the Climate, Biodiversity, Land and Water Department and the Nutrition and Food Systems Division for their contributions. Finally, the work of the communication specialists of FAO and IFAD is here duly acknowledged.
Agriculture today stands at a crossroads. It faces increasing pressure to provide sufficient, affordable and nutritious food for a growing population, to coping with climate change and the degradation of natural resources, including water scarcity, soil depletion and biodiversity loss. Pervasive and persistent social and economic inequalities between rural and urban areas have led to an unprecedented level of urbanization, and cities that have limited absorptive capacity face issues related to social marginalization and sometimes conflict.

To feed the world and do it sustainably, an urgent and radical shift in our food systems is necessary. To be effective, transformative actions must address a complex set of interconnected objectives encompassing economic, social and environmental dimensions. Family farmers—including pastoralists, fishers, foresters, indigenous people and other groups of food producers—are at the heart of this issue. They provide the majority of the world’s food, are the major investors in agriculture and the backbone of the rural economic structure.

In view of these challenges, the United Nations proclaimed the United Nations Decade of Family Farming (2019-2028) in December 2017, providing the international community an extraordinary opportunity to address family farming from a holistic perspective, in order to achieve substantial transformations in current food systems that will contribute to achieving the 2030 Agenda for Sustainable Development.

By placing family farming at the centre of the international agenda for a period of ten years, this Decade of Family Farming provides an unprecedented possibility to achieve positive change throughout global food systems. Family farmers have proven their capacity to develop new strategies and provide innovative responses to emerging social, environmental and economic challenges. They don’t just produce food. They simultaneously fulfil environmental, social and cultural functions, and are custodians of biodiversity, preserving landscape and maintaining community and cultural heritage. Further, they have the knowledge to produce nutritious and culturally appropriate food as part of local traditions.

In fact, nothing comes closer to the paradigm of sustainable food production than family farming. Family farmers, when supported with affirmative policies and programmes, have a unique capacity to redress the failure of a world food system that, while producing enough food for all, still wastes one third of the food produced, fails to reduce hunger and the different forms of malnutrition, and even generates social inequalities.

The Global Action Plan of the United Nations Decade of Family Farming (2019-2028) represents a tangible result of an extensive and inclusive global consultation process involving a wide array of different partners around the world. The purpose of the Plan is to mobilize concrete, coordinated actions to overcome challenges family farmers face, strengthen their investment capacity, and thereby attain the potential benefits of their contributions to transform our societies and put in place long-term and sustainable solutions.

With the launch of the United Nations Decade of Family Farming (2019-2028), we reiterate our determination and commitment to support concerted actions to fulfil the ambitions of the 2030 Agenda for Sustainable Development, and to step up interventions for a healthy, resilient and sustainable food system. Let us put family farming at the centre to lead this transformation for this Decade and beyond.

José Graziano da Silva
FAO Director-General

Gilbert F. Houngbo
President of IFAD
Introduction

Background

The Decade of Family Farming provides an extraordinary opportunity for the United Nations to achieve its Sustainable Development Goals (SDGs) in an inclusive, collaborative and coherent way. Putting family farming and all family-based production models\(^1\) at the focus of interventions for a period of ten years, will contribute to a world free of hunger and poverty, where natural resources are managed sustainably, and where no one is left behind—corresponding to the top commitments of the 2030 Agenda.

Family farmers hold unique potential to become key agents of development strategies. Family farming is the predominant form of food and agricultural production\(^2\) in both developed and developing countries, producing over 80 percent of the world’s food in value terms.\(^3\) Given the multidimensional nature of family farming, the farm and family, food production and life at home, farm ownership and work, traditional knowledge and innovative farming solutions, the past, present and future are all deeply intertwined.

Family farming has been gaining global attention since 2014, which was designated the United Nations’ International Year of Family Farming (IYFF). By dedicating an International Year to family farming, the United Nations repositioned family farming at the centre of agricultural, environmental and social policies in national agendas and achieved a shift towards a more equal and balanced development.\(^4\) The IYFF fuelled a robust process of political dialogue among the 197 Member States of FAO, involving all relevant actors, which resulted in the formulation of national and regional policies, programmes, activities and institutional arrangements in support of family farming.\(^5\) Multi-actor platforms, including around 50 National Committees on Family Farming (NCFF), have been created for policy dialogue, stimulating strong political commitment in favour of family farming (high-level political declarations and civil society mobilizations at national and regional levels).\(^6\)

In light of the achievements of the IYFF, and as a result of the ensuing IYFF+10 campaign launched on 20 December 2017, the United Nations General Assembly proclaimed 2019-2028 as the UN Decade of Family Farming\(^7\) (UNDFF) at its 72nd Session. UNDFF serves as a framework for countries to develop

1 In this document the notion of family farming refers to all types of family-based production models in agriculture, fishery forestry, pastoral and aquaculture, and include peasants, indigenous peoples, traditional communities, fisher folks, mountain farmers, forest users and pastoralists.
2 In this document, agriculture refers to crop, livestock, fisheries (capture and aquaculture) and forestry.
3 FAO, 2014. The State of Food and Agriculture. Innovation in family farming, Rome, FAO.
5 Some significant examples include the Gambia’s reformed seed policy (creation of a Seed Council, on which civil society organizations have obtained three seats); the Decree 1030/2014 in Argentina (creation of a State Secretariat for Family Farming).
6 Among others: the 6th Berlin Agriculture Ministers' Summit (Germany, 18 January 2014) at the Global Forum on Food and Agriculture (GFFA) issued a declaration signed by 65 ministers in support of family farming; the Declaration of the Heads of States and Governments of the Community of the Latin America and Caribbean States (CELAC) /Havana, Cuba, 28-29 January 2014/; the Ministerial Conference for the IYFF for Asia and the Pacific (Chennai, India, 7 August 2014); the Declaration on Family Farming adopted by the Latin American Parliament (26 August 2014).
public policies and investments to support family farming and contribute to the achievement of the United Nations’ SDGs. It will address family farming from a holistic perspective for rural poverty eradication in all its forms and dimensions, while giving the SDGs a central role in the transition towards more sustainable food systems and societies. To guarantee the success of the UNDFF, action must be supported by coherent, cross-sectoral policies, concurrently addressing the environmental, economic and social dimensions of agricultural and rural development.

To oversee the implementation of the UNDFF, an international steering committee was established, composed of representatives of Member States and family farmer organizations. The International Steering Committee of the UN Decade of Family Farming (ISC UNDFF) is supported by the FAO and IFAD joint secretariat.8

**Concept of Family Farming**

Family Farming (including all family-based agricultural activities) is a means of organizing agricultural, forestry, fisheries, pastoral and aquaculture production that is managed and operated by a family, and is predominantly reliant on the family labour of both women and men. The family and the farm are linked, co-evolve and combine economic, environmental, social and cultural functions.

**Family Farming and the 2030 Agenda for Sustainable Development**

The UNDFF will channel strong political commitment at national, regional and global levels, in the spirit of global partnership and solidarity, particularly supporting the creation of an enabling environment for family farmers to be empowered and supported. Key factors include identifying and implementing concrete policies and actions associated with effective and predictable investment modalities. With that in mind, this 10-year process primarily contributes to the 2030 Development Agenda through revitalizing the global partnership for sustainable development and helping the mobilization of the means of implementation (SDG 17). The UNDFF as a multi-stakeholder alliance can reinforce the renewed global partnership for development by: enhancing North-South, South-South and triangular, regional and international cooperation with a focus on knowledge-sharing and innovation tailored to family farming (target 17.6); fostering international support for implementing effective and targeted capacity-building in developing countries to support national sustainable development plans (17.9); supporting the joint and coordinated actions for sustainable development, supported by multi-stakeholder partnerships (17.16), among others.

In the framework of this improved global partnership, the UNDFF aims at strengthening family farming and promoting diversified and innovative food systems while contributing to the 2030 Agenda in an even more comprehensive and coherent way. The seven pillars of work identified (see below) as building blocks for the implementation of the UNDFF are fully consistent with the spirit and guiding principles of the SDGs framework:

---

• **Leaving no one behind:** Many factors—including social, political and economic—can contribute to a person or a group experiencing vulnerability, poverty, poor nutritional standards, lack of opportunities or low standard of life. Moreover, these ‘group-based’ inequalities intersect. A key challenge ‘leaving no one behind’ is learning how to recognize and respond to the relationships between these different factors and how they combine, thus requiring action across all SDGs. The different Pillars of the UNDFF Action Plan (with a more specific reference to Pillar 5 on socio-economic well-being and resilience, and on Pillars 2 and 3 on women and youth) address issues that can tackle inequality, discrimination and marginalization. Achieving progress towards the well-being of family farmers helps convert their potential into reality, making them agents of change who contribute to the realization of multiple SDGs.

• **Multidimensionality:** Family farmers are key actors. Their multifunctionality allows them to act holistically on various relevant aspects of sustainable development. For instance: they produce most of the world’s food, in particular the food consumed by the rural and urban poor; they preserve biodiversity, they manage natural resources and ecosystems, they preserve and share traditional knowledge, they contribute to the resilience of people and ecosystems, and when empowered, they add economic value and foster inclusive economic growth. The pillars of the UNDFF aim to integrate the three dimensions of sustainable development—economic growth, social inclusion and environmental protection—as well as support participation and partnerships among different actors. Each pillar allows for integrated work on multiple and interconnected SDGs with benefits accruing across sustainability and development dimensions.

• **A nexus approach:** Almost four years after the approval of the SDGs, many countries are still struggling to implement comprehensive plans, which are a prerequisite of the indivisibility and interconnectedness of the SDGs. By virtue of the multidimensionality of sustainable development, the SDGs are indivisibly connected to each other. The UNDFF pillars help identify nexuses across the SDGs, facilitating the identification of priorities, as well as comprehensive plans and institutional arrangements. Taking into account complex development nexuses reduces the risk of sector-specific actions undermining each other, while helping analyse trade-offs and synergies between expected results. Ultimately, this enhances the implementation of the 2030 Agenda while delivering the UNDFF’s expected results with improved efficiency. A more detailed description of nexuses promoted by the different pillars of the UNDFF workplan is included below.

• **Means of implementation (MoI):** Identified in the 2030 Agenda, MoI include finance, trade, capacity-building and/or science, technology and innovation, policy environment, and partnerships. They enable the deployment of the SDGs at their maximum potential. The UNDFF specifically focus on innovation, knowledge-sharing, capacity-building and technology access and/or transfer as the basis to formulate impactful actions and strategies that effectively support the realization of various integrated sets of SDGs through the achievement of its specific pillars/outcomes. In other words, the UNDFF can help the identification and mobilization of MoI to support the SDGs, particularly at country level, and raise awareness on needs for MoI globally, regionally, nationally and locally.
Poor family farmers can shift from subsistence to creating income generation opportunities in rural areas.

Social protection policies and resilient livelihoods are key to exiting poverty traps and providing opportunities.

Family farmers can implement resilient and highly productive agricultural practices that create income generation opportunities.

Policies to improve their access to natural resources, productive inputs and tailored services unleash their productive potential.

Family farmers can contribute to transforming food systems to make them more sustainable.

Policies should support family farmers in reducing food loss and in managing natural resources in a sustainable and efficient manner.

Family farmers can promote food systems that are more resilient to climate change.

Improving the ability of family farmers to adapt to climate-related shocks is a precondition for unleashing their potential.

Family farmers can preserve biodiversity, the environment and culture.

Safeguarding their cultural and natural heritage lies at the heart of this transformation.

Reinforcing the capacity of family farmers and their organizations makes family farmers more able to serve their communities.

Recognition, voice and an enabling environment will support their potential as agents of change.

Family farmers and their organizations can deliver inclusive rural services and contribute to territorial development.

Improved access to basic services and capacity development in rural areas is key to make family farmers agents of change.

Women farmers are essential to achieve sustainable, productive and inclusive food systems.

Gender equality in terms of improved access to resources, technology, and a greater voice in decision-making is a key step towards creating the world we want.

Family farmers can enable diversified food systems that can create job opportunities in rural areas and positively affect rural-urban mobility, particularly for youth.

Access to infrastructure, technology, and to tailored innovations that meet their needs is what they need to improve our common future.

Family farmers can enable food systems that strengthen sustainable integration between urban and rural areas.

With innovative market solutions, people living in both rural and urban areas can enjoy healthy, nutritious and safe food.

Family farmers enable food systems that strengthen sustainable integration between urban and rural areas.
The challenges of food systems and family farming

Food systems face increasingly pressing challenges such as hunger and diet-related diseases, the need to provide a growing global population with sufficient and healthy food, the need to reduce food loss and waste, the depletion of natural resources, the increase of greenhouse gas emissions, environmental degradation, climate change and its related shocks and stresses.10

Family farmers, including peasants, indigenous peoples, traditional communities, pastoralists, fishers, mountain farmers, and many other groups of food producers, hold unique potential to promote transformative changes in how food is grown, produced, processed and distributed, which enhances territorial development.11

Enabling and supporting family farmers to attain diversified, innovative and dynamic agricultural systems can increase the availability of nutritious, sustainably produced and culturally appropriate food, which can incentivize healthy diets while promoting the transition towards context-specific, diversified, resilient and sustainable food systems.

Viable food systems that are built around family farmers can offer new economic opportunities and attractive employment. They also promote rural services (which are complementary to agricultural activities), while at the same time increasing rural-urban linkages and synergies through a short food supply chain, which can provide promising solutions to eliminating food loss and waste.

The multifunctionality of family farmers related to their roles within the community and as caretakers of the environment allows for efficient and sustainable use and management of natural resources, such as the conservation and sustainable use of biodiversity, the prevention of soil depletion, water pollution and environmental degradation. It also promotes social inclusion and equity, the preservation/transmission of knowledge and culture, and the provision of ecosystem services and landscape management.

This complexity requires adequate interconnected policies and actions that concurrently address the environmental, social and economic challenges of our society.

Action Plan

Vision statement of the UN Decade of Family Farming

The vision of the UN Decade of Family Farming: A world where diverse, healthy and sustainable food and agricultural systems flourish, where resilient rural and urban communities enjoy a high quality of life in dignity, equity, free from hunger and poverty.

Family farming is essential to achieve this vision.

Sensible policies, programmes and regulations considering the needs of present and future generations must protect and expand the agency, inclusion and economic capacity of family farmers putting their diversity at the centre of sustainable development and contributing to the Agenda 2030. This journey must start now.

Overall design

The Global Action Plan of the UN Decade of Family Farming 2019-2028\textsuperscript{12} aims at accelerating actions undertaken in a collective, coherent and comprehensive manner to support family farmers, who are key agents of sustainable development.

Given the extensive heterogeneity of family farms around the world, general policy prescriptions are unlikely to be relevant to all family farmers.\textsuperscript{13} To effectively support family farming, it is necessary to consider its particular geographic and socio-economic specificities and to develop context-specific interventions focused on the explicit features of the relevant family farmer groups, while building on locally available resources and capacities.

This plan is meant to provide a detailed guidance for the international community, including: local and national governments, parliamentarians, specialized agencies and other relevant bodies of the United

\textsuperscript{12} The Global Action Plan was designed through a global consultation process gathering inputs from all relevant actors around the world about the main challenges, priorities and potential contributions of family farming to sustainable agriculture, forestry and fisheries at different levels. Data collected include key elements of around 60 direct conversations (semi-structured interviews) with representatives of various stakeholders (government representatives, family farmers, civil society organizations, consumers and rural workers). Indicative actions also emerged from the direct submission of action-proposals by global family farmer networks (by the International Planning Committee for Food Security, World Rural Forum and La Via Campesina). Finally, the plan also incorporates results of 672 responses collected through the online consultation launched on the FAO Family Farming Knowledge Platform in 6 languages, (in English, Spanish, French, Arabic, Russian, and Chinese). A broad discussion was organized on the first draft of the Global Action Plan at the Global Conference on Family Farming, held in Bilbao, Spain on 25-29 March 2019 resulting in the final version of the Global Action Framework approved by the International Steering Committee of the Decade of Family Farming and presented here.

Nations, international financial institutions and other international mechanisms, regional bodies, farmers and producer organizations, academic and research institutes, civil society organizations, and small and medium enterprises and the private sector, to achieve the main objectives of the UNDFF outlined in the vision statement.

It serves as a tool to create connections with ongoing processes and recommended approaches, where family farming, rural development and sustainable livelihood are already strongly interwoven, in order to develop and implement strategies at the global, regional, national and local levels. It offers a comprehensive instrument to support efforts to achieve the SDGs in the context of the progressive realization of the Right to Adequate Food.

The Global Action Plan outlined here recommends a series of indicative and interconnected actions from the global to the local level following the mutually reinforcing pillars of work.

Indicative actions presented under the pillars are to be considered as guidance for all actors in building plans and strategies at different levels. While providing potential approaches or entry points, they cover a wide range of possible areas of interventions simultaneously targeting different aspects (including obstacles) of family farmers to be assessed in a holistic manner for concrete action.

The Action Plan provides an extensive list of activities through various modalities of action, including: data collection pertaining to specific issues, advisory and extension services, and communication and advocacy activities tailored to target groups. Developing the capacities of family farmers and other stakeholders across a wide spectrum must be reinforced as a key component, along with strengthening inclusive governance mechanisms. These activities can provide a base for appropriate and adequately financed public policies that support family farming.

According to the pillars of work presented above, an enabling policy environment (Pillar 1) needs to be in place to achieve and sustain progress in food security and nutrition. This enabling environment can provide a framework for specific strategies and interventions tailored to family farming groups facing distinctive economic, environmental and social realities, and equipped with various assets.

To guarantee the future of family farming while building on the essential contribution of women to agriculture, transformative actions must be taken to incentivize the active engagement, and the leadership and socio-economic inclusion of youth and women. Activities to ensure the generational renewal (Pillar 2–Transversal) and to promote gender equity and equality (Pillar 3–Transversal) in family farming will be mainstreamed in all the other work pillars.

Providing tailored support to organizations of family farmers (Pillar 4) is paramount. This includes all the various sectors of food producers, such as farmers, fishers, pastoralists, forest users and indigenous peoples. This is essential not only to enhance and amplify sustainable food production practices, or to strengthen their capacity to access and generate economic opportunities, but also to empower them to better access necessary resources, services and markets and to bolster their collective action to participate meaningfully in negotiations and policy processes.

Helping family farmers increase their productivity is not enough. Reflecting the diversity of family farmers and improving their livelihood and economic viability in a manner that enables them to escape

---

14 Related processes include the UN Decade of Nutrition 2016-2025, the UN Decade of Biodiversity 2011-2020, the UN Decade of Water 2018-2028, implementation of internationally agreed instruments, etc.
poverty—a focus on the provision of the minimum requirements for the households of rural family farmers—is also required (Pillar 5). Specific steps are essential to promote sustainable food production, processing and distribution practices in agriculture, livestock, fisheries and aquaculture, and forestry (Pillar 6) and, further, to support the multifunctional nature and performance of family farming, which provide services to food production, nourishing cultures and agro-biodiversity and providing diversified rural economic opportunities (Pillar 7).

While developing the intervention under the specific pillars, actions are to be adapted and contextualized according to concrete regional, national and local (territorial) sociocultural and socio-economic conditions. Moreover, as a precondition for the successful implementation of the UNDFF, a bottom-up approach to implementation is recommended, in participative and inclusive processes, placing family farmers at the forefront. While encouraging multi-actor collaboration at all levels, the Global Action Plan also invites all actors to revise their specific roles and responsibilities vis-à-vis the support of family farming and increasing the sustainability of our food systems.

**Ensuring effective operationalization**

This section presents basic implementation modalities which will be promoted by the UNDFF to initiate country-driven, inclusive and bottom-up activities to progress with the implementation of the Global Action Plan.

Among the initial steps in the implementation of the UNDFF, synergies with other international bodies and processes relevant to family farming will be created. Examples of related processes with opportunities to optimize efforts and promote mutual benefits include the UN Decade of Action on Nutrition 2016-2025, the UN Decade of Water 2018-2028, and the UN Decade of Ecosystem Restoration 2021-2030. The UNDFF will also seek opportunities to support the implementation and benefit from activities related to agreed international frameworks (the Voluntary Guidelines to support the Progressive Realization of the Right to Adequate Food in the Context of National Food Security, the Voluntary Guidelines on the Responsible Governance of Tenure of Land, Fisheries and Forests in the Context of National Food Security to Food, the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries in the Context of Food Security and Poverty Eradication, the UN Declaration of the Rights of Peasants and Other People Working in Rural Areas, among others). Concrete joint road maps with priority initiatives reinforcing mutual benefits with the various initiatives will be developed to strengthen partnerships, increase family farming visibility and reinforce the implementation of actions for the support of family farming.

A solid process will be promoted to contextualize the implementation of the Global Action Plan of the UNDFF at national and regional levels. Governments and regional intergovernmental spaces will be encouraged to identify and map existing efforts taken at national and/or regional levels to strengthen family farming. This mapping process should incorporate existing ongoing relevant actions and a needs assessment of different actors in order to build integrated and well-tailored interventions to effectively support family farmers. It is recommended to undertake this process in an inclusive manner, involving family farmers and other relevant actors, including already existing National Committees of Family Farming, to guarantee that all actors provide their complementary contributions according to their specific roles and responsibilities. Including to promote multi-actor collaboration in order to mobilize key players to convert identified needs and actions into concrete action plans at national level.
**Pillar 1**

Develop an enabling policy environment to strengthen family farming

Build and strengthen supportive policies, investments and institutional frameworks for family farming at local, national and international levels based on inclusive and effective governance and on timely and geographically relevant data.

Guarantee sustained political commitment and investment by state and non-state actors. Create and strengthen international, national and local cooperation and partnerships with the view of promoting the rights and multidimensional role of family farming.

---

**Pillar 4**

Strengthen family farmers’ organizations and their capacities to generate knowledge, represent farmers’ concerns and provide inclusive services in rural areas.

---

**Pillar 5**

Improve socio-economic inclusion, resilience and well-being of family farmers, rural households and communities.

---

**Pillar 6**

Promote sustainability of family farming for climate-resilient food systems.

---

**Pillar 7**

Strengthen the multidimensionality of family farming to promote social innovations contributing to territorial development and food systems that safeguard biodiversity, the environment and culture.
Pillar 2
Support youth and ensure the generational sustainability of family farming

Strengthen the (self-)organization of family farmers within all rural institutions, including associations, cooperatives and civil society organizations, in order to foster their capacities as agents of change; enhance the generation and dissemination of knowledge and services to maintain the economic, social, cultural and environmental diversity of rural areas in a harmonious interconnection with urban areas; and to enhance family farmers’ meaningful participation in decision making processes at all levels.

Pillar 3
Promote gender equity in family farming and the leadership role of rural women

Ensure the generational sustainability of family farming through enabling youth accessing land, other natural resources, information, education, infrastructure and financial services, markets and policymaking processes related to farming. Benefiting from the intergenerational transfer of tangible and non-tangible farming assets, stimulate young farmers to interconnect traditional, local knowledge with innovative ideas to become agent of inclusive rural development.

Pillar 4
Improve socio-economic inclusion, resilience and well-being of family farmers, rural households and communities.

Pillar 5
Promote sustainability of family farming for climate-resilient food systems.

Pillar 6
Strengthen the multidimensionality of family farming to promote social innovations contributing to territorial development and food systems that safeguard biodiversity, the environment and culture.

Pillar 7
Support instruments and conducive actions for the achievement of women’s rights and gender equality in food and agricultural production. Promote gender equality by reinforcing women’s organizations, promoting self-empowerment, their own capacity development process and women’s autonomy and agency, to increase access to and control over productive and financial resources, especially land, as well as access to information, social protection policies, markets, job opportunities, education, appropriate extension services, gender-friendly technology, and full participation in policy processes.
The Regional and National Action Plans including specific activities will provide a road map for countries and regions to progress with the implementation of the UNDFF, allowing for the building of accurate interlinkages to the broader SDG process, and giving value to the multidimensional contributions of family farming to achieve the SDGs.

The ISC UNDFF will gather country demands and guide FAO and IFAD to ensure support for effective policies and actions and coherence with their existing mechanisms, especially taking advantage of FAO and IFAD’s knowledge and experience in facilitating multilateral exchange and cooperation. FAO and IFAD stand ready to assist family farmers, to strengthen their organizations—also through horizontal exchanges at different levels—as key agents of operationalizing national plans, while also ensuring that actions reach the grass-roots level.

The Global Action plan envisages the establishment of 100 National Action Plans of Family Farming by 2024. This target is ambitious, but attainable, especially considering the support received through the approval of the UN General Assembly (and the 104 countries co-sponsoring the ‘IYFF+10 campaign’). Responsible authorities are invited to inform the ISC UNDFF of the development of National Action Plans and submit those to the Secretariat of the UNDFF, through their respective FAO or IFAD country/regional representatives. Information received will inform the development of biennial reports (see ‘Monitoring and reporting’ below) providing opportunities to discuss progress made by governments and other stakeholders in the framework of the UNDFF to contribute to the improvement of the Global Action Plan.

**Monitoring and reporting**

To track the progress of the implementation of activities during the UNDFF, a reporting mechanism and timeline will be developed in line with the monitoring process of the SDGs.

Considering the ongoing monitoring process of the implementation of the 2030 Agenda for Sustainable Development, Member States and other UNDFF actors will be invited to align the presentation of their progress with the regular Voluntary National Reviews (VNR) of the 2030 Agenda. That each country will have primary responsibility for collecting and making data on the SDG indicators available will contribute to the results of the UNDFF. Progress reports on the activities undertaken in the framework of the UNDFF will be assessed under the overall purview of the ISC UNDFF.

Beyond the 2030 Agenda monitoring and accountability system, and in line with declarations on aid effectiveness such as the Paris Declaration on Aid Effectiveness and the Accra Agenda for Action, a framework for policy coherence for sustainable development will be established with all relevant initiatives, platforms and processes. This presents opportunities for synergies and joint actions (the Paris Agreement and the United Nations Framework Convention on Climate Change, the United Nations Decade of Action on Nutrition, and the relevant Committee on World Food Security products, among others).

For monitoring purposes, an ad hoc Working Group on Monitoring (including different stakeholders, in particularly Member States, farmers’ organizations, civil society, academia and research centres) will be established. The group will develop a joint methodology and tools to monitor progress, to raise awareness about UNDFF monitoring at national and global levels, as well as to help countries enhance their technical and institutional capacity for monitoring and reporting.
The establishment of this inclusive monitoring mechanism will aim at enhancing coordination among the different actors involved, contributing to timely synergies, promoting accountability and sharing best practices at all levels, including through:

- The follow-up and review of global and country/region-specific family farming situations, trends, progress, challenges and lessons shared;
- Assessment of the effectiveness of the UNDFF and the extent of the application of its recommendations on agriculture and rural development policies at national and subnational levels; and
- Advice provided on the basis of country/regional reviews of the UNDFF’s objectives.

Stakeholders are encouraged to implement national and regional mechanisms to support monitoring. To guarantee a participatory and inclusive approach of the global monitoring exercise, all actors working in the framework of the UNDFF (including governments, farmers’ organizations, academia and research centres, among others) will be encouraged to share their contributions and results through submitting their reports to the UNDFF website.

Based on data and information gathered through the above mechanisms, and as defined in UN Resolution (§ 5), the Secretariat of the UNDFF will provide biennial reports to the UN Secretary-General, in order to inform the UN General Assembly of the overall progress made on the implementation of UNDFF and on the related SDGs. These reports will be sent to the governing bodies of FAO and IFAD (FAO’s Council and IFAD’s Executive Board) for review and comments. The biennial reports will provide opportunities to assess achievements and improve actions carried out under the framework of the UNDFF. The Global Action Plan of the Decade will be updated after every biennial report.

As a further opportunity to evaluate the progress of the UNDFF, an open and inclusive dialogue among all stakeholders will be convened on the occasion of the Global Forum on Family Farming (every two years) and the two High-Level Events on Family Farming (mid-term and end of the UNDFF).
Pillar 1.
Develop an enabling policy environment to strengthen family farming
An enabling social, economic and political environment is a prerequisite for family farmers to lead the transformation towards zero hunger and poverty, sustainable and healthy food systems, and an inclusive and resilient society.

Building an enabling policy environment to support the diverse and multi-layered contributions of family farming to sustainable development requires strong and sustained political commitment. This political commitment must translate into adequate resourcing along with inclusive and effective governance and institutional arrangements, including meaningful opportunities for family farming organizations and civil society to engage in multisectoral and multi-actor mechanisms, platforms and policy processes (at all stages, including their design, implementation and monitoring) and in the context of the progressive realization of the Right to Adequate Food.

At the same time, awareness-raising activities–targeting specific groups and also integrated in the education system at all levels–are important means to reframe society’s perception of family farming and to increase social recognition of their role and multidimensional contribution to sustainable development.

Effective interventions to support family farmers and their multidimensional nature cannot be approached through traditional sectoral policies, but require a complex set of integrated, multisectoral policies, strategies and programmes that address the economic, environmental and social constraints family farmers and their communities face.

These policy shifts must be grounded on reliable, timely, and locally relevant data and evidence on the multidimensional performance of family farming and simultaneously look at interconnected objectives for the whole food system.

By focusing on institutional and policy enabling environment, this pillar would help countries promoting integrated approaches to achieve and sustain progress over the entire SDGs framework. Strengthening the policy environment in support of family farming addresses systemic issues such as improving data generation and availability, reinforcing policy and institutional coherence and fostering multi-stakeholder partnerships and capacity-building (SDG 17), as well as fostering an improved and transparent governance, strengthening institutions and promoting laws and policies that foster sustainable development, peace and security (SDG 16). It would also allow for harmonization of comprehensive sustainable development plans and strategies at country level, with sectoral policies targeting in particular the most vulnerable segments of the society to leave no one behind, with positive effects on poverty and hunger eradication (SDGs 1 and 2).
### Outcomes | Outputs | Indicative actions from global to local level
---|---|---
**PILLAR 1. Develop an enabling policy environment to strengthen family farming**

#### 1.1. Reliable, timely, locally relevant data and evidence about the multidimensional performance of family farming available to inform policymaking, monitoring and evaluation at all levels.

1.1.A. Data collection and inclusive research assessing multiple dimensions of family farming conducted to support well-targeted policy design and implementation for family farming in all agricultural sectors.

1.1.1. Systematize already existing information and collect and document timely, locally relevant data related to the diversity and to the multidimensional performance of family farming (size, labour, natural resource management, crops, livestock, socio-economic services, ecosystem services, biodiversity conservation, etc.).

1.1.2. Review and improve methods applied in agricultural census in order to record multidimensional contributions and performance of family farming for the support of policy development.

1.1.3. Support local, participatory and policy-oriented research (co-creation of knowledge through the collaboration of researchers and family farmers) on:
- Access to socio-economic services (health, education, social protection, financial inclusion, etc.);
- Access and adoption of sustainable production practices;
- Services provided by family farmers;
- Identification, utilization and market development for locally produced, nutritious foods;
- Impact of healthy diets and improved nutrition on the health of various population groups (develop diet quality assessment tools);
- Sustainable innovation done by family farming;
- Family farming integrated in urban and territorial food systems planning (including local government strategies for ensuring food security and nutrition);
- Risk management strategies;
- Share of family farming products for consumption, export and supplied to agribusiness; and
- Investment trends related to family farmers, etc.

1.1.4. Promote the development of accessible data-repository systems including data relevant to different areas of family farming for public policy development purposes.

1.1.5. Provide gender- and age-disaggregated data (by using the Women’s Empowerment in Agriculture Index /WEAI/).

1.1.6. Provide support to strengthen and facilitate integrated and multisectoral research based on the local, traditional and indigenous knowledge of family farmers at local, national, regional and inter-regional levels.

1.1.7. Create clear, usable indicators and analytic tools for development of policies, to effectively reach family farming in all sectors, monitoring their implementation and effectiveness.

#### 1.2. Enhanced political and financial commitment and public awareness to support diverse and multi-layered contributions of family farming to sustainable development.

1.2.A. Awareness-raising and advocacy initiatives improving the understanding of different actors on family farming-related matters carried out.

1.2.1. Develop awareness training and advocacy campaigns, tools and materials targeted to specific population groups on the simultaneous contributions of family farming to social, environmental and economic development.

1.2.2. Raise public awareness both in rural and urban areas on family farmers’ contributions to public health, promote the consumption of healthy and nutritious diets of family farmers.

1.2.B. Continuous, meaningful, coherent and active political and financial engagement ensured.

**Number of countries with increased level of availability, accessibility, quality and usage of sector/cross-sectoral data and analytical tools/products that are used in decision-making processes pertaining to family farming.**

**Number of countries with increased level of commitment and capacity to adopt comprehensive sectoral and/or cross-sectoral policies, strategies and investment programmes to support the multi-layered contributions of family farming to social, economic and sustainable development.**
- Sustainable innovation done by family farming;
- Family farming integrated in urban and territorial food systems planning (including local government strategies for ensuring food security and nutrition);
- Risk management strategies;
- Share of family farming products for consumption, export and supplied to agribusiness; and
- Investment trends related to family farmers, etc.

1.14. Promote the development of accessible data-repository systems including data relevant to different areas of family farming for public policy development purposes.

1.1.5. Provide gender- and age-disaggregated data (by using the Women’s Empowerment in Agriculture Index /WEAI/).

1.1.6. Provide support to strengthen and facilitate integrated and multisectoral research based on the local, traditional and indigenous knowledge of family farmers at local, national, regional and inter-regional levels.

1.1.7. Create clear, usable indicators and analytic tools for development of policies, to effectively reach family farming in all sectors, monitoring their implementation and effectiveness.

1.2.3. Promote continuous multi-actor dialogue to build coherent and active political commitment with appropriate financing for the support of family farming.

1.2.4. Provide technical assistance to integrate the multidimensional practices of family farming into national policies/strategies.

1.2.5. Disseminate and share existing public policies on family farming.

Pillar 2–Transversal. Support youth and ensure the generational sustainability of family farming
One of the main preconditions for keeping agriculture viable and sustainable is the generational renewal of family farming, i.e. the retaining of young people on the farms and in rural communities. The future of food and agriculture lies in the hands of the next generation of family farmers. Urgent actions are therefore needed to support young people's engagement in agriculture and promote their active contribution to rural development.

The inadequate level of generational turnover in farming is largely due to the lack of opportunities for on- and off-farm employment of youth in rural areas, resulting in the internationally observable demographic trend of farmers' ageing. This is a major risk for the survival of the agricultural, fishery and forestry sectors, seriously affecting the composition of the rural labour force, patterns of agricultural production, land tenure, social organization within rural communities, and socio-economic development in general.

The entry of young people into farming is widely recognized as a key driver to fostering the vitality of rural areas and competitiveness of agriculture. Nevertheless, those interested in farming are increasingly confronted by multiple structural and institutional barriers, including the limited access to land, the insufficient access to knowledge, information and education, financial services, green jobs and markets and their limited involvement in policy dialogue. A coordinated response to the complex challenges that youth face is more urgent than ever. Actions need to provide youth with adequate access to information, education and vocational skills, as well as to tangible and intangible productive assets and markets. Supporting legal and financial measures is key to facilitating the transmission of existing farms and to motivating the set-up of new ones. Distinct, youth-specific training and education programmes can significantly contribute to the generational sustainability of family farming.

To facilitate generational turnover in agriculture, it is equally important to provide elderly farmers with necessary measures and social protection services supporting their retirement from farming and allowing them to grow old with security and dignity.

As widely recognized, when youth enter farming, they bring a number of resources–skills, networks, capital, technologies, marketing and management practices–allowing for innovation in the farming, fishing and forestry sectors. To guarantee the sustainability of these innovations, it is vital to consolidate and carefully match these new solutions with the local, natural environment and socio-economic conditions. Intergenerational collaboration, catalysing the exchange, matching and combination of generation-specific (traditional and modern) knowledge and skills can be instrumental in this matter. Both inter- and intra-generational learning processes are vital to accelerating value-adding activities that will increase the economic stability and autonomy of young family farmers.

To ensure generational renewal in family farming, it is essential to organize and bring youth together, and to improve their capacities for collective action. The effective participation of aspiring and young farmers in policy processes has the potential to reframe society’s perception of family farming as a dynamic sector with constant renewal capacity.

By investing in empowering and offering opportunities to rural youth, countries would simultaneously promote approaches on education (SDG 4), decent employment and inclusive economic growth (SDG 8), and poverty reduction (SDG 1). The results cut across several SDGs and across the three sustainability dimensions. In the mid-long term, keeping youth in rural areas by offering better life conditions and opportunities also reduces internal and international migration, as well as drivers for conflicts (SDG 16).

Pillar 3 - Transversal.
Promote gender equity in family farming and the leadership role of rural women
Women account, on average, for almost half of the agricultural labour force. They are essential to achieving sustainable, productive and inclusive food systems, as well as zero poverty and zero hunger within the framework of the SDGs.

Women contribute to food systems not only with their labour but also with their knowledge of agricultural practices and biodiversity. They engage in on- and off-farm activities and play a central role in natural resource management and food production, processing, conservation and marketing. Rural women diversify income sources and ensure food security, nutrition and well-being for their families and communities.

Rural women also play a unique role as service providers and resilience builders: they combine income-generating work with unpaid household responsibilities, such as caring for children and the elderly. When women control additional income, they spend more than men do on food, health, clothing and education for their children, with positive implications for immediate well-being as well as long-run human capital formation and the building of resilience strategies.

Despite this huge contribution, many women farmers remain the most affected by poverty, social exclusion, and are more likely to not see their basic human rights respected. As consumers, women are more likely to be food insecure than men in every region of the world; and as producers, rural women face even greater constraints than their male counterparts in accessing essential productive resources and services, technology, market information, financial assets, financial services, technology and job opportunities.

This “gender gap” limits rural women’s ability to take advantage of new opportunities, and prevents them from reaching their full potential, thus undermining the achievement of the multidimensional and inclusive rural development envisaged by the 2030 Development Agenda.

The complexity of these challenges strongly calls for comprehensive and dedicated policies incentivizing women to engage in food systems all along the value chains, starting from the multiple functions of family farming to reinforce women’s role in rural communities.

In particular, women’s access to, use of and control over land and other productive resources is essential to ensuring that they are key players in guaranteeing food security and safeguarding biodiversity. Policies dedicated to closing this gap represent one of the most effective approaches to combat rural poverty, support women’s productivity to generate marketable surpluses and add value to their food production and transformation.

Strengthening women’s organizations to effectively deliver inclusive rural services and contribute to gendered research and innovation is the necessary precondition for enhancing women’s economic inclusion all along the food systems. The promotion of specific services (care services for children and dedicated extension services, among others) complements the improved access to productive resources and helps them in accessing better income and decent job opportunities, as well as reinforces their productive skills and their capacities to improve ecosystem services, reverses environmental degradation and protects biodiversity.

Women farmers are particularly vulnerable to violence, due to their relatively weaker social position and lack of awareness regarding their rights. Promoting a favourable context to generate cultural changes towards gender equality with specific policies, programmes, institutions and advocacy campaigns is key to deal with the various forms of discrimination and violence they face.

The role of women’s and farmers’ organizations is also central to generating data, increasing visibility and raising awareness on the importance of rural women’s productive work, which helps them gain recognition as full members of the community and achieve autonomy and a leadership role in society. Investing in training and capacity development is paramount to ensuring women’s and their organizations’ agency and capacity to participate in and to affect decision-making processes.

Promoting platforms and spaces at all levels to support dialogue and exchanges of successful experiences on affirmative actions for gender equality—even through SSC and farmer-to-farmer cooperation—has proven to be particularly effective in developing rural women’s capacities and skills, as well as in enhancing public recognition of rural women’s role and potential, and in increasing their political representation and incidence.

The fundamental role of women to achieve sustainable development is spelled out in the 2030 Agenda with, targets on gender included across almost all SDGs. By working on this pillar, countries promote integrated approaches conducive to achieve SDG 5, (gender equality), SDG1 (no poverty, with a dedicated target to women’s access to land and other productive resources), SDG 2 (Zero Hunger, with a specific target on increasing rural women’s productivity and incomes, leading to multiple benefits on reducing hunger and malnutrition), SDG 10 (no inequalities) and SDG 16 (reduce conflicts and instability). Addressing the gender gap in accessing services and resources in rural areas will also improve performances under health (SDG 3), education (SDG 4), water and sanitation (SDG 6), and clean and affordable energy (SDG 7). Reinforcing rural women’s organizations and their impact in public life will display their full potential for food security, resilience and well-being, as key players in the transformative evolution towards more sustainable inclusive and climate-resilient food systems (thus contributing to SDGs 11, 12, 13, 14 and 15).

### PILLAR 3–Transversal. Achieve gender equity in family farming and rural women's leadership role

#### 3.1. Improved and active engagement of rural women in family farming and in rural economy.

- **3.1.A.** Comprehensive and dedicated policies incentivizing women engaging in family farming, their leadership roles, offering them diverse opportunities along the supply chain to take advantage of the multiple functions of family farming in place and implemented.
- **3.1.B.** Public policies to guarantee access to social rights, education, health and social protection for women and their children in family farming implemented.
- **3.1.C.** Awareness-raising and advocacy initiatives improving the understanding of productive work by rural women and their role in preserving local and ancestral seeds, knowledge, culture and tradition carried out to achieve their economic, political and social empowerment and autonomy.

#### 3.1.1. Promote synergies in policies, legislations and programmes to provide equal rights and opportunities for women and men in family farming by applying guidance provided in international instruments.

#### 3.1.2. Review, implement and monitor policies and legislations to guarantee equal opportunities in family farming, taking into account the capacities, needs and aspirations of rural women.

#### 3.1.3. Develop and implement policies, strategies and programmes that promote rural economic diversification and generate decent rural employment and income, creating better opportunities for women farmers.

#### 3.1.4. Provide capacity development for policy makers on gender equity and equality to ensure that gender analysis is incorporated in the formulation, implementation and evaluation of rural development policy, programmes and projects.

#### 3.1.5. Systematise already existing information, collect and document timely, locally-relevant, gender-disaggregated data to assess the current situation and needs of women farmers.

#### 3.1.6. Promote the development of care services for children linked to education services for them (to free women’s time burden and facilitate their access to skills training and production).

#### 3.2. Increased access of women in family farming to natural resources, (re-)productive assets, information, infrastructure, financial services and to markets.

- **3.2.A.** Comprehensive and dedicated policies improving access, control and tenure security of women over natural resources defined and implemented.
- **3.2.B.** Policy measures facilitating access to productive assets, financial services and markets for women in family farming in place and implemented.

#### 3.2.1. Promote policy, legal and organizational framework ensuring that women and girls have equal access, control and tenure rights to land and natural resources independent of their civil and marital status.

#### 3.2.2. Promote specific actions to improve access and control of women over water sources.

#### 3.2.3. Promote the development of policy tools to support women farmers' access to productive assets, information and infrastructure.

#### 3.2.4. Promote policy measures and incentives that facilitate women’s access to labour-saving technologies to overcome production constraints.

#### 3.2.5. Promote the development and availability of financial services tailored to the needs of women in family farming.

#### 3.2.6. Develop gender-sensitive supply chains to enhance the full productive potential of women in agrifood systems and increase their access to higher-value, more remunerative (local) markets and decent employment opportunities.

Pillar 4. Strengthen family farmers’ organizations and capacities to generate knowledge, represent farmers and provide inclusive services in the urban-rural continuum.
Family farming comprises many social groups including smallholder families, forest producers, fishers, pastoralists, indigenous peoples and local communities. They all have a close relationship with farming in the context of different landscapes where they produce crops, harvest, collect and add value to a variety of forest and farm products, raise livestock and fish for their livelihood. The diversity of rural livelihoods associated with family farming also requires different types of services and specific relationships with different stakeholders.

Family farmers are getting organized all around the world according to their environmental, economic, social and political realities to adequately respond to the multiple challenges they face. Based on specific demands and needs, farmer organizations emerge in a wide diversity of forms, including formal or non-formal networks, farmers’ associations, agricultural cooperatives, social movements among others, in order to improve the livelihood, economic situation, access to services and the recognition of their members both in public policies and by the society.

Concrete experiences show that when farmers get organized and strengthen their collaboration, together, they achieve better results, while reducing inequalities through longer-lasting solutions. Organized farmers can contribute to policy change, linking local solutions to national and global goals and challenges such as the SDGs and climate change. By playing a catalytic role to improve family farmers’ opportunities to access their rights, agricultural resources, public services and policies, and to access markets, family farmers’ organizations become the backbone of vibrant and inclusive rural societies. It is therefore of key importance to recognize this role and to take particular actions to stimulate the development of new and strengthen already existing organizations of family farmers at all levels, enhancing their capacity to promote and articulate new services in many different areas according to their views and the requests of the members. While acknowledging the diversity of environmental and political contexts, this work has to respect the autonomy and self-organization of family farmers as a key principal.

Solidarity, transparency and respectful, equitable internal relations and a governance mechanism can be considered fundamental elements for the development of strong rural organizations. It is essential that internal strategies of the organizations are anchored in the territories and/or landscapes, recognizing the spatial, environmental, social and cultural diversity of development opportunities. Giving youth leadership roles in organizations will guarantee the future and dynamic operation of those institutions. Family farmer organizations themselves can act as important networks for women farmers to empower and strengthen their recognition and role in the families and in the rural communities. To build sustainable and effective family farmer organizations, it is essential that those create and maintain dynamic linkages to external actors, consumers, decision makers, among others both in rural and urban areas.

Family farming is multidimensional, accordingly, family farmers’ organizations can carry out a number of functions linking their members to many public services they may not be aware of or be able to access easily. They are also able to provide inclusive and diverse services to their members and in their rural communities.

21 FAO, 2013. Good practices in building innovative rural institutions to increase food security. FAO, Rome.
Beyond food production, family farmers’ organizations carry out education, business development, communication, insurance, cultural or health services for their members, arrange childcare and support elderly people in their communities. These services provided at local level are fundamental, as they are often the only accessible ones for the rural population.

Organizations of family farmers play an important role to further strengthen the capacities of their members in a variety of areas, including the use of sustainable production and processing practices, entrepreneurial and business management skills, capacities to better engage in policymaking processes and to better access markets.

Evidences show that the direct, peer-to-peer exchanges between food producers are among the most effective learning processes. It is therefore instrumental to incentivize those horizontal exchanges at different levels, to embrace the variety of formats (farmer-to-farmer, women farmer to women farmer, youth-to-youth learning exchanges, farmer field schools, field visits, learning journeys, mentoring courses, etc.), knowledge, skills (both practical and theoretical), processes and tools (from local communication to network/platforms) appropriate for family farming.

When family farmer organizations come from endogenous process and rely on a strong internal structure, they are more likely to be successful in advocating and engaging in dialogue with other actors. Catalysing collective actions, in particular, to improve family farmers’ and their organizational capacities to meaningfully participate in developing, improving, implementing and monitoring policies for their benefits, can guarantee that policies will really reflect their needs and will provide well-tailored interventions for them, contributing to sustainable territorial development.

Another important dimension of the structural transformations affecting family farming and rural livelihoods is the role that communication and the new technologies play in facilitating access to knowledge and information and allowing family farmers and their organizations to make their voices heard.22 Dedicated rural communication services greatly advance economic, environmental and social dimensions of family farming (e.g. shortening the value chains linking producers to market; improving resilience and climate change adaptation through community-based early warning systems; and supporting farmer-lead advisory services for inclusive innovation). It is therefore compelling to enhance farmer organizations’ capacities to promote and deliver new types of rural communication services to improve linkages with their male and female members and rural institutions, and to engage young farmers in innovative and sustainable family farming.

By operating in this pillar, countries can ensure that no one is left behind, the core commitment of the 2030 Agenda. As spelled out in several SDG targets (particularly under SDGs 1, 2, 5, and 11), strengthening the capacities of rural actors, particularly family farmers, rural women and youth, countries can unlock the potential of those actors and allow them to fully contribute to the well-being and resilience of their communities, as well as to participate in the national development and economic growth. By facilitating family farmers’ organization and coordination, countries can deliver better, inclusive and tailored services to family farmers and rural communities, which contribute to the achievement of SDGs 4, 6, 7 and 10. Strengthened organizations of family farmers are better able to raise awareness and to affect policy-making processes to ensure more responsive, inclusive, participatory and representative decision-making processes at all levels, as well as a better access to information and knowledge (SDG 16) and inclusive multi-stakeholder partnerships to improve capacity-building (SDG 17) with a particular gendered aspect regarding women’s organization (SDG 5).
### Outcomes Outputs Indicative actions from global to local level

#### PILLAR 4. Strengthen family farmers’ organizations and capacities to generate knowledge, represent farmers and to provide inclusive services in the urban-rural continuum

| 4.1. Strengthened governance and organizational capacities of family farmers’ organizations engaged in agriculture, forestry and fisheries to better serve their members and their communities. | 4.1.A. Capacity development programmes on organizational skills for family farmers and their organizations at global, regional and national and local levels provided. | 4.1.1. Provide training and capacity development for family farmers’ organizations (also in the format of horizontal exchanges, e.g. farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:  
- Internal organizational structures, management and governance processes;  
- Resource mobilization, project management and monitoring skills; and  
- Cultural identity. |

<tr>
<td>4.2. Family farmers’ and their organizations’ technical expertise and capability to access and provide (both farming and non-farming-related) services to their members strengthened for sustainable livelihoods and landscapes.</td>
<td>4.2.A. Family farmers and their organizations have increased capacity for sustainable, locally adapted production and for responsible governance of natural resources.</td>
<td>4.2.1. Promote the elaboration of written guidance materials (in local languages) for family farmers and their communities, well-tailored to local contexts and needs, to increase their use of international instruments and to strengthen family farmers’ sustainable livelihoods.</td>
</tr>
</tbody>
</table>
| | 4.2.B. Business incubation services are identified and strengthened or newly established within or outside family farmers’ organizations and are accessible to family farmers and their organizations. | 4.2.2. Provide training and capacity development for family farmers’ organizations (also in the format of horizontal exchanges, e.g. farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:  
- Responsible governance and sustainable management and use of natural resources and on climate resilience (biodiversity, agroecology, resilience to shock, etc.);  
- Technical capacity to increase the use of locally appropriate and relevant sustainable food production, conservation, storage, and seed dynamic management practices;  
- Capacity on innovation practices interconnecting locally specific (traditional) knowledge with new solutions. |
| | 4.2.C. Family farmers and their organizations are able to provide business development services to improve enterprises, access value chains, markets and finance. | 4.2.3. Provide capacity development to enhance business development services of family farmers and their organizations, e.g. farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:  
- Responsible governance and sustainable management and use of natural resources and on climate resilience (biodiversity, agroecology, resilience to shock, etc.);  
- Technical capacity to increase the use of locally appropriate and relevant sustainable food production, conservation, storage, and seed dynamic management practices;  
- Capacity on innovation practices interconnecting locally specific (traditional) knowledge with new solutions. |
| | 4.2.D. Family farmers and their organizations are able to facilitate access to public social and cultural services or directly provide these to their members to enhance well-being, equity and improve prosperity. | 4.2.4. Provide training and capacity development for family farmers’ organizations (also in the format of horizontal exchanges, e.g. farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:  
- Responsible governance and sustainable management and use of natural resources and on climate resilience (biodiversity, agroecology, resilience to shock, etc.);  
- Technical capacity to increase the use of locally appropriate and relevant sustainable food production, conservation, storage, and seed dynamic management practices;  
- Capacity on innovation practices interconnecting locally specific (traditional) knowledge with new solutions. |
| | 4.2.E. Family farmers and their organizations are able to share and link their members to extension and other technical and traditional innovations and inputs to improve sustainable productivity. | 4.2.5. Provide capacity development to enhance extension and other technical and service delivery or facilitation of family farming organizations. |

---

23 Family farmers’ organisations in this document refer to all types of rural institutions in which family farmers participate, including farmers’ associations, agricultural cooperatives, social movements and civil society organizations, etc.
4.1. Strengthen family farmers’ organizations to generate, document and share knowledge, exchange good practices and lessons learned among farmers, fishers, pastoralists, mountain farmers, indigenous peoples and to share those with other relevant stakeholders.

4.1.2. Strengthen existing mechanisms to generate, document and share knowledge, exchange good practices and lessons learned among farmers, fishers, pastoralists, mountain farmers, indigenous peoples and to share those with other relevant stakeholders.

4.1.3. Establish, improve and strengthen dialogue between constituencies of family farmers to foster their internal collaboration and cooperation with other actors.

4.2. Family farmers’ communities.

4.2.1. Promote the elaboration of written guidance materials (in local languages) for family farmers and their communities, for family farmers and their organizations already providing social and cultural services; and

4.2.2. Provide training and capacity development for family farmers’ organizations.

- Capacity to overcome barriers for effective engagement in farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:
- Economic enhancement, entrepreneurship, business and finance management;
- Capacity on innovation practices interconnecting locally adapted production and for use of natural resources and on climate resilience (biodiversity, agroecology, resilience to shock, etc.);
- Responsible governance and sustainable management and use of international instruments and to strengthen family farmers’ organizations with increased technical and service provision capacities.

4.2.3. Provide capacity development to enhance business development service delivery or facilitation of family farming organizations.

- Development of business incubation capacities and service delivery in family farmers’ organizations to increase capacities and effectiveness;
- Peer-to-peer learning and mentoring of women’s entrepreneurs to empower women;
- Training for youth to support their effective inclusion and participation.
- Facilitating and strengthening access to finance including guarantee schemes, revolving funds, microcredit and formal bank credit; and
- Build capacity and engagement of family farmers’ organizations in innovative funding mechanisms.

4.2.4. Provide capacity development to enhance social and cultural service delivery or facilitation of family farming organizations (social services include: microfinance, child-care, insurance, maternity/paternity leave or support, support for elderly and for vulnerable members, etc.; cultural services include strengthening traditional knowledge and customary practices, etc.).

- Exchange visits to existing, successful examples of family farmer organizations already providing social and cultural services;
- Capacity development events, training, exchanges to increase understanding of the role of family farming organizations in social and cultural services to strengthen ownership;
- Pilot improved service delivery with selected family farmers’ organizations to improve social and cultural service delivery; and
- Ensure that family farmers’ organizations are represented in national SDG processes—planning, implementation and monitoring processes.
- Provide capacity development to enhance extension and other technical service delivery or facilitation of family farming organizations.

4.2.5. Provide capacity development to enhance extension and other technical service delivery or facilitation of Family family Farming farming organizations.

### Outcomes | Outputs | Indicative actions from global to local level
--- | --- | ---

**PILLAR 4. Strengthen family farmers’ organizations and capacities to generate knowledge, represent farmers and to provide inclusive services in the urban-rural continuum**

**4.3. Collective actions, by strong, transparent and inclusive organizations looking for solutions conducted.**

4.3.A. Family farmers and their organizations engaging through collective action to advocate for policy change and implementation that reflects the needs and aspiration of their members and communicates.

4.3.B. Promote recognition and visibility of farmers’ organizations, including the elimination of the criminalization against their members and actions.

4.3.1. Provide training and capacity development for family farmers’ organizations (also in the format of horizontal exchanges, e.g. farmer-to-farmer learning exchanges, farmer field schools, etc.) to foster their:
- Knowledge and awareness of their rights, roles and responsibilities, boosting their effective and meaningful participation in multi-actor decision-making processes;
- Negotiation and advocacy skills to successfully engage in policy-making processes, in review of legislative frameworks, etc. (linked to Pillar 1); and
- Data generation capacity.

4.3.2. Capacity development and knowledge-sharing on effective advocacy strategies delivered to and by family farming organizations.

**4.4. Communication, ICTs capacities/services improved, and family farmers’ voices heard**

4.4.A. Inclusive rural communication services support family farming policies and programmes.

4.4.B. Improved producer organization (PO)’s communication, ICTs capacities and knowledge-sharing capacities.

4.4.C. Awareness raised on the UNDFF and family farmers’ voices heard.

4.4.1. Assess trends, needs and priorities to promote access to inclusive rural information and communication services (media, channels, contents, etc.) in the context of family farming policies and programmes, including through policy dialogue involving family farming organizations.

4.4.2 Provide the technical support for farmer organizations, institutions and governments, and promotion of investments and partnership to deliver dedicated information and communication services for family farmers.

**4.4.3. Regional and national plans and initiatives to enhanced capacity of family farmer organizations:**

- Mapping of communication experiences, needs and priorities of farmer organizations in each region;
- Apply communication and ICTs to family farming and inclusive food systems and innovation services while enhancing family farming organizations;
- Designing communication and knowledge management system/services and trainings for family farming organizations that serve their needs;
- Effective communication processes and media for improved communication among producer organizations and their members; development opportunities (services, employment, investments); linkages with consumers, advisory services and markets; improve access to information on compelling issues (e.g. climate change, prices, migration, etc.); and
- Improving capacities on communication and participatory approaches to generate and share knowledge on priorities through appropriate channels and formats.

**4.4.4. Participatory communication plans to raise awareness on UNDFF and to increase the outreach of family farmers’ organizations, including partnerships with family farming organizations, rural institutions and community media, among others.**
Pillar 5.
Improve socio-economic inclusion, resilience and well-being of family farmers, rural households and communities
Though family farming is the foundation of food security and sustainable healthy food systems, family farmers are those who are the most impacted by poverty and vulnerability, and face the highest levels of economic, financial, social and environmental risks. Small-scale food producers, especially women, youth, indigenous peoples and ethnic minorities, are among the most disadvantaged groups. Seventy-five percent of the world’s poorest live in rural areas and depend on agriculture for their livelihoods. They often have limited access to natural resources, productive assets and markets. In this context, it is essential that strategies and investments targeting the undeniable need for reducing poverty adopt a family farming-centred approach.

Poverty, as reflected in the 2030 Agenda, means much more than limited savings. To ensure sustainable livelihood and to effectively respond to the vulnerability of family farmers’ households, the provision of basic services is of fundamental importance: local infrastructure (energy and sanitary systems, etc.), formal and informal education and health services are the foundation for improved living standards.

Social protection systems, grounded on the human rights-based approach, have proved to be highly effective in reducing poverty and food insecurity, promoting the realization of the right to food and fostering inclusive rural and territorial developments, as recognized in the 2030 Agenda and the Addis Ababa Action Agenda. Taking into account the strong interlinkages between the family and the farm, social protection interventions must simultaneously improve the well-being of the household, support decisions about investments and ensure resilience in case of unexpected shocks.

Equipped with the minimum conditions of living, family farmers need to be provided with agricultural, fishery and forest assets, including natural and productive resources allowing for enhanced production and reproduction capacities. Family farmers require secure tenure rights in order to obtain a secure base for their livelihoods and for social and cultural well-being. Access to and control over those resources are therefore essential to enable family farms’ investments (particularly long term) and sustainable development. Gender approach is also fundamental to address inequality in both statutory and customary tenure systems, and dedicated targets on tenure and property of land and other productive resources for women (including policies allowing women to inherit and access land) are spelled out across the SDGs. It is critical that specific measures promote equitable legitimate tenure rights for the youth as well. In addition to those interventions, inter-familial inequalities are to be addressed.

In order to increase the family farmer’s production of sufficient, safe, diverse and nutritious food for their own provisions, it is fundamental to strengthen the diversification of their production. At the same time, it is essential to promote diversified models of production, practices and technical solutions to reduce family farmers’ dependence on external inputs and to improve their efficiency and economic viability while strengthening their economic, ecological and social resilience.

---

These interventions should be reinforced by specific programmes to reduce family farmers’ exposure and vulnerability to extreme climate-related events and other economic, social and environmental risks, shocks and disasters.

Beyond producing to feed their families, family farmers play a key role in improving the dietary patterns of their communities and of urban populations. It is therefore indispensable to improve family farmers’ access to domestic and local markets, where appropriate remuneration for their work and investments is guaranteed and continuous and well-structured demands for their products are provided.28

Enabling basic services and infrastructures, social protection systems, diversified production practices and markets will allow family farmers to overcome structural and conjectural constraints, and their transition from vulnerable subsistence farming to a socially and economically strengthened position, where their own work and investments, potentially generating surplus, can be re-invested into their farms, family and community. In addition, it is essential to provide family farmers with appropriate, timely and locally relevant information and to incentivize their social organization to collectively address the complex set of challenges they face.

Evidence shows that with family farmers at the centre of policies and interventions, immediate effects are visible across multiple, interconnected targets of the SDGs, notably: reduced hunger, improved nutrition and poverty reduction (SDGs 1 and 2), gender equality and reduced inequalities (SDGs 5 and 11), increased and more sustainable production and consumption (SDG 12), resilience of communities to climate and shocks (SDG 13), improved management of natural resources (SDGs 14-15) and increased investments in agriculture (MoI), conducive to rapid and long-standing economic growth (SDG 8). For this reason, the SDGs recognize the fundamental role of small-scale food producers, particularly of women and youth, and call for their access to land and other productive resources to reduce poverty and to improve their productivity and income. National strategies targeting poverty and hunger eradication should therefore adopt a family farming-centred approach, conducive to integrated approaches at country and local levels.

### Outcomes

**PILLAR 5. Improve socio-economic inclusion, resilience and well-being of family farmers, rural households and communities**

#### 5.1. Enhanced standard of living and reduced household vulnerability through access to social protection, services and public goods for family farmers—in particular for youth, women and for their communities.

- **5.1.A.** Access to social protection systems based on human rights, addressing multiple vulnerabilities while improving the resilience of family farmers and their communities in place.
- **5.1.B.** Improved access of family farmers and their communities to basic services, including services for children and their education.
- **5.1.C.** Financial services tailored to family farmers and to their communities developed and in place.

#### 5.2. Improved access to and control of natural resources and productive assets by family farmers, in particular of youth and women, indigenous and landless people.

- **5.2.A.** Public policies and legal frameworks guaranteeing the rights and improving access, control and tenure security of family farmers over natural resources in place and implemented.
- **5.2.B.** Public policies facilitating and enhancing family farmers’ access to productive assets increasing their productivity of labour improving their processing and commercialization capacities defined and implemented.

#### Indicative actions from global to local level

- **5.1.1.** Promote the expansion and scale-up of social protection interventions (social pensions, contributory and non-contributory, etc.) following the human rights-based approach.
- **5.1.2.** Promote the development of adequate social protection programmes that can effectively respond to the vulnerabilities of family farmers across the life cycle and addressing multiple social, economic and environmental vulnerabilities of family farmers and their communities by promoting their economic inclusion, income security and the development of sustainable and resilient livelihoods.

- **5.2.1.** Promote the analysis, improvement and implementation of policy and regulatory frameworks to improve access and tenure security of family farmers over natural resources (water, land, ocean, genetic resources, forest resources, aquatic systems, nutrients, energy) by the progressive implementation and use of relevant international instruments and guidelines.

PILLAR 5. Improve socio-economic inclusion, resilience and well-being of family farmers, rural households and communities

5.1. Enhanced standard of living and reduced household vulnerability through access to social protection, services and public goods for family farmers—particularly for youth, women and for their communities.

5.1.1. Promote the expansion and scale-up of social protection interventions (social pensions, contributory and non-contributory, etc.) following the human rights-based approach.

5.1.2. Promote the development of adequate social protection programmes that can effectively respond to the vulnerabilities of family farmers across the life cycle and addressing multiple social, economic and environmental vulnerabilities of family farmers and their communities by promoting their economic inclusion, income security and the development of sustainable and resilient livelihoods.

5.1.3. Promote and strengthen advisory and financial services tailored to family farmers’ needs (extension, training, cash transfers, microcredit, start-up capital, insurance), and ensure inclusive and non-discriminatory access to these services.

5.1.4. Promote public policies (with related public investments) for the provision of public goods for family farmers (sanitation, formal and informal education, health services, infrastructure, energy, etc.).

5.1.5. Promote investment in human development (particularly for women and youth) and stimulate their participation in social networks.

5.2. Improved access to and control of natural resources and productive assets by family farmers, in particular of youth and women, indigenous and landless people.

5.2.1. Promote the analysis, improvement and implementation of policy and regulatory frameworks to improve access and tenure security of family farmers over natural resources (water, land, ocean, genetic resources, forest resources, aquatic systems, nutrients, energy) by the progressive implementation and use of relevant international instruments and guidelines.

5.2.2. Promote the development and implementation of public policies, regulatory frameworks and responsible investments increasing access to productive assets (equipment, infrastructure and labour-saving/technology) improving family farmers’ productivity of labour.

5.2.3. Promote public policies (with related public investments) for the provision of public goods for family farmers (sanitation, formal and informal education, health services, infrastructure, energy, etc.).

5.2.4. Promote investment in human development (particularly for women and youth) and stimulate their participation in social networks.

Number of countries with improved social protection, human development, advisory and financial services for family farmers that enhance synergies in social protection with rural poverty reduction, food security and nutrition, and sustainable management of natural resources.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.

5.4.4. Promote capacity development programmes for family farmers and their organizations on traditional food preservation techniques in rural areas and value-adding for local products via agroprocessing.

5.4.3. Promote short food supply chains (also directly linking to family farmers’ products and services. Support the building of enterprises, industries, etc.).

5.4.2. Promote institutional procurement programmes and policies for public institutions, food assistance and agroprocessing.

5.4.1. Promote the development and implementation of policy frameworks and institutional arrangements.

5.4.6. Promote dialogue with different private sector entities (small and medium-sized enterprises, industries, etc.).

5.4.5. Promote responsible investment for and by family farmers and capacity development activities for family farmers allowing combination of farm and non-farm activities enhancing the diversification of their source of income.
Pillar 6.
Promote sustainability of family farming for climate-resilient food systems
Global challenges of population growth and with dietary changes foreseen have put increasing pressure on the already jeopardized agricultural system to provide all with sufficient and healthy food. Despite significant improvements in the efficiency of food systems, the number of undernourished and obese people continues to increase. As widely recognized, the current food and agricultural system is largely responsible for deforestation, water scarcities, biodiversity loss, soil depletion along with high levels of greenhouse gas emissions, which have significantly contributed to climate change. Today’s food production and consumption have been shifted from their culturally and socially embedded systems towards a system disconnected from local ecological and social systems. In order to meet the needs of present and future generations, it is essential to accelerate a transition towards more sustainable food and agriculture systems that can simultaneously provide economic and social opportunities, while protecting the ecosystems upon which agriculture depends and respecting the cultural and social diversity of territories.

Family farmers produce about 80 percent of the world’s food, and therefore have the unique potential to drive this transition. Rooted in their communities and understanding local ecologies, they are well positioned to offer contextualized, comprehensive and long-term solutions.

Embedded in an enabling environment, actions for transition towards more sustainable, resilient and nutrition-sensitive agriculture and food systems have to take a holistic approach and simultaneously address production, processing, distribution and consumption related issues, including collaboration with a wide range of actors (individuals, organizations, enterprises) working in agriculture, forestry, aquaculture and fisheries.

One of the preconditions for the sustainable provision of food, goods and services in agriculture, forestry and fisheries is family farmers’ secure access to natural resources and productive assets. With affirmative frameworks in place that enable farmers, fishers, pastoralists and indigenous people to access and control, use and manage productive resources, family farmers are better placed to apply integrated and innovative farming practices. To achieve significant improvements in the food system, it is essential to boost the capacity of farmers, regardless of the size of their farms, to optimize and efficiently use the diversity of species and genetic resources to improve soil fertility and the regeneration of natural resources. The application of these practices will reduce the need for external inputs, lower production costs and strengthen resilience, economic viability, and, at the same time, generate positive externalities and contribute to climate change adaptation and mitigation.

For sustainable innovations, new farming practices and techniques are to be developed inclusively and carefully matched with the locally specific knowledge and practices owned by farmers, fishers, pastoralists, indigenous people, women and men for generations.

---

When addressing the challenges of today’s food system, actions are required to improve the sustainability of markets. In the context of family farming, markets are essential to facilitating adequate remuneration for their work and investments. The development of a more inclusive market environment should include interventions, which can improve conditions of family farmers’ participation in the value chain. This includes providing timely and locally relevant information, transparent prices and equitable relations in contractual agreements for family farmers along the various parts of the food chain (food processing, storage, logistics, retail and food services). Parallel to these interventions, governments have an essential role to play in supporting family farmers’ access to new marketing opportunities, which are based on direct contact between consumers and producers. Besides providing benefits for family farmers, short circuit markets can significantly contribute to the transformative efforts towards a more sustainable food system, reduce food loss and waste, strengthen connections between rural and urban areas, thus generating inclusive territorial development, while mitigating climate change. The collaboration of food producers (through cooperatives or other forms of associations) can catalyse consistent supply of products to markets.

This pillar offers the opportunity to simultaneously address effects of climate change (SDG 13), foster sustainability of food systems (SDGs 2 and 12), improve the sustainability in management and use of terrestrial and aquatic ecosystems (SDGs 14 and 15), with impacts across the three dimensions of sustainability. Similar to the previous pillars, enabling conditions are key to allow family farmers effectively play their role as critical agents of change.

</tr>
</tbody>
</table>
Pillar 7. Strengthen the multidimensionality of family farming to promote social innovations contributing to territorial development and food systems that safeguard biodiversity, the environment and culture.
Family farmers are heterogeneous constellations in all realities, regardless of their level of development. The heterogeneity is due to family farming’s intrinsic nexus between the way family farmers produce and live. This includes the different dimensions of family farming which are not limited to production, but include diverse non-agricultural activities, to ensure the security of family consumption, the sustainability of agroecosystems and landscape management and the transmission of locally and traditionally rooted knowledge, cultural heritage and social values.\textsuperscript{35} In this sense, considering and valuing those dimensions not strictly economic or market-related, family farming is primarily a unit of life.

Family farmers’ practices of production, consumption and social reproduction are strongly embedded in the local communities and territories where they continuously interact, combine and mutually transform and renew ecological, economic and social resources. By doing so, family farmers not only produce food, but also provide several services and public goods for the society. Supporting this complexity and multidimensionality of family farmers can carry the promise to promote endogenous growth and preserve the diversity of ecosystems, genetic resources, culture and life.\textsuperscript{36}

Territorial development needs to be reconnected with the people (and families) who carry out the productive activity, with their practices, their values, and with the knowledge traditionally and locally determined.

Interventions should focus on family farming’s innovativeness, enabling their use and dynamic management of genetic resources and incentivizing the development of production systems which can optimize the diversity and complementarity of species and increase biological synergies between crops, livestock and trees, leading to greater resource use efficiency and resilience, increased productivity and enhanced ecosystem service.\textsuperscript{37}

Based on these features, family farmers’ production systems can, at the same time, guarantee the reproduction of resources and increase the availability of diverse, nutritious, sustainably produced and culturally appropriate food in a steady and sturdy way, enabling healthy diets.\textsuperscript{38}

Family farming experiences and knowledge have accumulated over generations, creating a sound and solid capacity for continuous renewal. Family farmers’ flow of novelty/innovations is to be supported with interventions and incentives that take into account their dynamic and endogenous development tendencies, in order to allow social and economic innovations to thrive—also through solidarity, cooperative and collective actions—that can increase the availability of new rural services and other public goods for rural and urban populations.

\textsuperscript{36} FAO, 2018. FAO’s Work on Agroecology. A pathway to achieving the SDGs, FAO, Rome.

Innovative market solutions built on locally available resources and embedded in the local social context are essential to promote new and renewed services and goods, and to increase the recognition and interest for traditional products and products with specific quality characterizations, allowing family farmers to maintain the value added in their production.39

To strengthen the emergence of these markets, coherent institutional frameworks, adequate regulations and proper infrastructure are required to eliminate the barrier to entry, provide greater flexibility for family farmers and reconnecting producers and consumers, while fostering rural urban synergies.40 It is essential to recognize, that further to the exchange of products, these markets perform multiple functions: markets act as a space for social interaction and exchange of knowledge.41 They promote the creation of employment and offer attractive jobs while allowing family farmers to keep and re-invest the value added in their production units, boosting territorial development that responds to the demands and general interest of rural and urban populations.

By operating in this pillar, countries can promote integrated and sustainable territorial planning, responding to the needs of both urban and rural populations, while sustainably managing natural resources and ecosystems. This pillar allows for integrated approaches to environmental targets across SDGs 2, 14 and 15, sustainability and resilience of rural and urban settlements (SDG 11), and respect and promotion of cultural heritage and traditional knowledge (SDG 12). Capitalizing on the traditional knowledge of and innovation produced by family farmers, indigenous people and their communities, while making innovation and technology available to them, would further strengthen sustainability and resilience of rural and urban human settlements. With the right incentives and targeted actions on rural infrastructure and market opportunities, impact would be visible on availability and variety of food (SDG 2), as well as on job and economic opportunities for rural communities (SDG 8).

7.1.3. Support groups and networks conserve, use and dynamically manage biodiversity, share and transmit local, traditional knowledge (seeds banks, research to recover and preserve native seeds, etc.).

7.1.4. Provide capacity development for family farmers and their organizations (also through direct exchange, farmer field schools) to exchange and share knowledge and good practices on sustainable management of agroecosystem and landscape.

7.1.5. Design strategies for harvest, conservation and recycling of water.

7.2.3. Promote inclusive territorial development policies to increase rural and urban interlinkages and enhance the role of family farmers in keeping vibrant and dynamic social lives (e.g. agro-tourism, recreation, sport activities, cultural events, consumption of local and traditional specialities, etc.).

7.2.4. Provide capacity development for family farmers, consumers and their organizations (also through direct exchange) on culturally appropriate food habits which incorporate and strengthen the balance between modern and traditional diet and promote healthy and nutritious food production and consumption.

7.3.2. Promote the development of regulations which support characterized quality products of family farmers (labelling for regional characterisation, organic products and socially responsible products also through participatory guarantee systems) and the preservation of traditional products and practices increasing and strengthening connections among farmers and with consumers.

7.3.3. Strengthen solidarity, collaboration and networks between family farmers (through in-formal and formal organizations) to realize the potentials of the multidimensional nature of family farming and thus improve their benefits from in the emerging economic opportunities and markets.
