

Food and Agriculture Organization
of the United Nations

Event Mobile Application EMA-i

Early reporting for early action – to prevent disease spread
and save farmer livelihoods!

Enhance your national animal disease
reporting system – with quality high
frequency communication using electronic
field data collection and a secure online
platform.

*“ I learnt how to detect diseases and report
them in real time, which makes prompt
response possible. The efficacy of the daily
fieldwork, as well as the management of the
country’s disease situation, have improved ”*

Dr Fenteng Danso
Ministry of Food and Agriculture, Ghana
