Experiences and challenges in analysing survey data to monitor SDG Target 2.1 in Samoa

N. Edith Faaola – Assistant Chief Executive Officer
Samoa Bureau of Statistics
Samoa
edith.faaola@sbs.gov.ws

Outline

- Samoa and the SDG monitoring process
- Constraints
  - Institutional
  - Technical
- Process
- Results
- Conclusion and recommendations
Background: Samoa and SDG monitoring

• The work on linking National Goals to the SDGs began in 2015

• Samoa Bureau of Statistics played the coordinating role in consulting sectors to assess what data was already available.

• As the importance of SDG’s continued to increase and awareness grew, Samoa also repositioned itself to create the Samoa National SDG Task Force chaired by Ministry of Foreign Affairs.

• Samoa worked with all sectors to identify indicators from respective sector plans and mapped those indicators to Samoa’s national priorities and SDG’s using the EPIC tool.

• SDG 2.1.1 and 2.1.2 were adopted as part of national monitoring process and 2020 VNR

In 2019: Samoa became the first PIC to report on both indicators
Institutional constraints

✓ HIES 2018 was the 5th of this kind of survey and is conducted about every 5 years (1997, 2002, 2008, 2013, 2018)

✓ About 25 full time SBS staff and about 60 enumerators collecting data intermittently over a 12 months period.

✓ Collection being performed each quarter over 12 months is very costly for government.

✓ Because of capacity gaps not addressed, CAPI could not be used as preliminary planned → delays in having data ready for analysis.

✓ Initial reluctance in incorporating FIES questions for fear of political backlash if FIES results came back with high food insecurity in Samoa which is contrary to local context.
Technical constraints – inclusion of the FIES

✓ FIES questions have not been included before in any surveys in Samoa. New to Samoa

✓ Difficulty in contextualizing concepts and definitions of FIES questions for the Samoan situation

✓ Hard to gauge attitudes and cultural behaviors of Samoans towards food and having enough or not enough of it

✓ Finding the right words in Samoan language to convey the intended meaning of FIES questions

✓ Not being able to interview all individuals of household 15+, head of household or a responsible adult responds on behalf
Technical constraints – analysis of the food data

- Limitation of the survey: HIES was not designed to perform such analysis
  - Food consumed away from home was not well captured in urban areas and statistics could not be disaggregated by region
  - More than 4000 different combinations of products and unit of measurement
  - Description of some food products was not always well reported or coded
  - Too few records over 14 days and excess quantities
  - Enumerator and respondent fatigue

- Lack of capacities:
  - SBS was not prepared for such analysis and found unprepared to some data requirements, structure, etc
  - Methodology to estimate SDG 2.1.1 not easy to understand
  - Not familiar with STATA
Process

- Main risk
  - Lack of time and resource available to perform the analysis
  - Challenges with data quality
  - Availability and access to the data

- Innovation:
  - Capacity building through a FAO Technical Cooperation Program project: one staff from SBS received an in-depth side by side training
  - Development of a country profile on food security and food consumption patterns in Samoa

Samoa country profile
Results - Main achievements

- Samoa is the first PIC to report timely on both SDG Target 2.1 indicators
- Food data have been analyzed to derive indicators on food security and nutrition patterns at national and for groups of populations
- The food insecurity experience scale performs relatively well in Samoa, only question related to healthy food was excluded from the analysis
- Results presented and discussed during a dissemination workshop with all stakeholders
- Country profile on food security and nutrition patterns in Samoa for advocacy
- One national staff fully trained for further strengthening of South-South collaboration
Results – food security and consumption pattern in Samoa

**SDG 2.1.1:** Less than one person out of twenty is undernourished in Samoa

**SDG 2.1.2:** About one person out of four is not having regular access to safe and nutritious food, even if they were not necessarily suffering from hunger.
Rich households consume almost twice the amount of dietary energy than poorer households.

Moderate food insecure people access food of lower quality compared to food secure people.

<table>
<thead>
<tr>
<th>Expenditure Tercile</th>
<th>Average national consumption is about 2 800 kcal/capita/day with some disparities at sub national level</th>
<th>Dietary energy consumption</th>
<th>Cost of 1000kcal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lowest</td>
<td>2 069</td>
<td>2 868</td>
<td>2.35</td>
</tr>
<tr>
<td></td>
<td>3 070</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Highest</td>
<td>3 880</td>
<td></td>

<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Food status</th>
<th>Dietary energy consumption</th>
<th>Cost of 1000kcal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Food secure</td>
<td>2 868</td>
<td>2.35</td>
</tr>
<tr>
<td>Moderate food insecure</td>
<td>2 836</td>
<td>1.90</td>
</tr>
<tr>
<td>Severe food insecure</td>
<td>2 544</td>
<td>2.15</td>
</tr>
</tbody>
</table>
Results – food security and consumption pattern in Samoa

Diet too rich in fats and too low in carbohydrates

Only 13 food items contribute to 80% of the dietary energy consumed
Results – food security and consumption pattern in Samoa

Except for vitamin C, lower average consumption of vitamins in food insecure or poor households
Conclusion and recommendations

- **Recommendations (technical)**
  - Improvement of the survey instrument and use of CAPI for future HIES
  - Include FIES on future survey and interview on household level not individual
  - Support the establishment of technical working group in the Pacific who have hands on experience with food security indicators to assist other PICs.

- **Points to Note**
  - Time allocated to this activity (important)
  - Resources allocated to this activity
  - There are new approaches to the data collection for HIES diary being proposed by WB that will potentially reduce costs and respondent burden but may impact continuity of reporting.
Thank you!
