25 kg/ha in 2018, Europe had the highest use of manure per hectare even though it declined slightly from its 2000 level, followed by Asia (20 kg/ha), the Americas (17 kg/ha), Oceania (7 kg/ha) and Africa (5 kg/ha). The ranking, and the order of magnitude, are quite different for chemical nitrogen: Asia is the largest user, with 108 kg/ha, followed by the Americas (65 kg/ha), Europe (50 kg/ha), Oceania (44 kg/ha) and Africa (16 kg/ha).
