

**Unasylva 252 (FAO: CB1600EN)****Corrigendum**

30 December 2020

The following corrections were made to the PDF of the report after it went to print.

<b>Page</b>	<b>Location</b>	<b>Text in printed PDF</b>	<b>Text in corrected PDF</b>
111 & 113	<b>‘Upscaling restoration : how to unlock finance’</b>	Missing paragraph	<p><b>TAPPING INTO CLIMATE FINANCE</b></p> <p>Climate finance can provide new sources of funding for restoration activities and create an enabling environment that will facilitate investments by private entities. Two broad trends are creating new opportunities for restoration projects to obtain access to climate-change-related finance, building on the multiple benefits such projects provide. First, climate action is being mainstreamed progressively in development agencies, banks and bilateral funding. Second, specialized multilateral funds are increasingly integrating the co-benefits between mitigation and adaptation as well as other co-benefits generated by restoration projects (e.g. regarding food security and biodiversity conservation) into their decision-making processes. As a result, many international initiatives and multilateral funds now offer broader opportunities for financing restoration programmes.</p>
