food insecurity:
when people must live with hunger
and fear starvation

The State of Food Insecurity in the World 2002
Acknowledgements

This fourth edition of The State of Food Insecurity in the World was prepared as a collaborative effort within FAO led by the Economic and Social Department (ES).

Overall leadership was provided by Hartwig de Haen, Assistant Director-General, ES, assisted by Prakash Shetty, Chief of the Nutrition Planning, Assessment and Evaluation Service (ESNA), who served as the chair of the core technical team. Invaluable conceptual and editorial assistance was provided by Andrew Marx of KnowledgeView Ltd.

Other members of the core technical team were: William Meyers, Barbara Huddleston and Kostas Stamoulis, Agriculture and Economic Development Analysis Division; Jorge Mernies, Statistics Division; David Wilcock, FIVIMS Coordinator; and Nicholas Hughes, Programme Coordinator, ES Department.

The following FAO staff provided technical contributions: Jelle Bruinsma and Josef Schmidhuber, Global Perspectives Study Unit (ES); Haluk Kasnakoglu, Ricardo Sibrian, Cinzia Cerri and Loganaden Naiken (consultant), Statistics Division (ES); Ergin Ataman, Mario Bloise and Paola de Salvo, Research, Extension and Training Division, and Paul Munro-Faure, David Palmer, Paolo Groppo, Adriana Herrera and Luciana Coletta-Iarussi, Rural Development Division (Sustainable Development Department); Freddy Nachtergaele and Marina Zanetti, Land and Water Development Division, and John Dixon, Agricultural Support Systems Division (Agriculture Department); Aysen Tanyeri-Abur, Sumiter Broca, Stefano Trento, Luca Fe d'Ostiani, Amdetsoin Gebre-Michael, Guenter Hemrich, Anna Carla Lopez, and Manish Tiwary, Agriculture and Economic Development Analysis Division (ES); Barbara Burlingame, Karel Callens, Florence Egal and Gina Kennedy, Nutrition Division (ES); Jenny Riches, FIVIMS Coordination Unit (ES); Liliana Balbi, Commodities and Trade Division (ES); Douglas McGuire and Thomas Hofer, Forest Resources Division (Forestry Department).

The key estimates on food consumption and undernourishment used in SOFI 2002 were produced by the Basic Data Branch and the Statistical Analysis Service of the Statistics Division (ES), respectively.

FAO extends special thanks to the team at Banson, Cambridge, UK, for design, layout, editorial support and preparation of graphic material.

The Editorial Group of the Information Division was responsible for language editing, editorial quality control and desktop publishing, while translations were provided by the Translation Group of the Conference, Council and Protocol Affairs Division (General Affairs and Information Department).
food insecurity:
when people must live with hunger and fear starvation
About this report

This fourth edition of *The State of Food Insecurity in the World (SOFI)* provides the latest estimates of the number of chronically hungry people in the world and reports on global and national efforts to reach the goal set by the World Food Summit (WFS) in 1996 – to reduce that number to half the level reported at the time of the Summit by the year 2015.

The report is divided into four main sections. The first section, *Undernourishment around the world*, analyses the latest data on hunger. Other articles combine this data with other indicators to chart the fatal connection between hunger and mortality and the strategic connection between combating hunger and achieving the Millennium Development Goals.

The second section contains a special feature on mountain people and mountain environments. This presents preliminary results from a multidisciplinary study carried out as part of FAO’s contribution to the International Year of Mountains. The study used newly available georeferenced data to estimate the number of mountain people vulnerable to food insecurity.

In the third section, *Towards the Summit commitments*, a series of articles discusses approaches to fulfilling the commitments in the WFS Plan of Action.

Finally, as in every edition of SOFI, two sets of tables provide detailed information on the prevalence in developing countries and countries in transition of undernourishment and on food availability, dietary diversification, poverty, health and child nutritional status.

SOFI draws on the ongoing work of FAO and its international partners in monitoring the nutritional status and analysing the vulnerability of populations worldwide. 

It represents part of FAO’s contribution to the Inter-Agency Food Insecurity and Vulnerability Information and Mapping Systems initiative.

### Food Insecurity and Vulnerability Information and Mapping Systems

I am very pleased to associate the Inter-Agency Working Group on FIVIMS (IAWG-FIVIMS) with this fourth edition of *The State of Food Insecurity in the World*. The information contained in this publication represents a substantial contribution to the objectives of FIVIMS, namely, to:

- increase global attention to problems of food insecurity;
- improve data quality and analysis through the development of new tools and capacity-building in developing countries;
- promote effective and better directed action aimed at reducing food insecurity and poverty;
- promote donor collaboration on food security information systems at the global and country levels;
- improve access to information through networking and sharing.

As the membership list indicates, the IAWG-FIVIMS represents diverse perspectives and interests. But we all share a commitment to reduce global food insecurity and vulnerability and to build sustainable livelihoods for the poor. Increasingly, the sustainable livelihood approach is seen as providing a framework for monitoring and assessing both food insecurity and vulnerability and the direction and impact of our efforts to alleviate them. Some examples of vulnerable livelihoods and vulnerable environments are detailed in SOFI, with a particular focus on mountain people in keeping with the designation of 2002 as the International Year of Mountains.

The international development environment in which IAWG-FIVIMS operates has changed markedly since the 1996 World Food Summit. The Millennium Development Goal (MDG) process has assumed a prominent role in development strategies and actions. The IAWG-FIVIMS looks forward to being fully involved with the MDG initiative and with efforts to monitor its implementation and impact at global and national levels.

As with previous issues of SOFI, IAWG members commend the FAO SOFI team for an excellent report on the state of food insecurity in the world.

Krishna Belbase (UNICEF)
Chair, IAWG-FIVIMS

### IAWG-FIVIMS membership

**Bilateral aid and technical agencies**
- Australian Agency for International Development (AusAID)
- Canadian International Development Agency (CIDA)
- European Commission (EC)
- German Agency for Technical Cooperation (GTZ)
- United States Agency for International Development (USAID)
- United States Department of Agriculture (USDA)

**United Nations and Bretton Woods agencies**
- World Food Programme (WFP)
- United Nations Development Programme (UNDP)
- United Nations Children’s Fund (UNICEF)
- United Nations Population Fund (UNFPA)
- World Bank (WB)
- World Health Organization (WHO)
- World Meteorological Organization (WMO)
- World Resources Institute (WRI)

**International non-governmental organizations**

Contents

4 Foreword
Towards the World Food Summit target

6 Undernourishment around the world
6 Hunger and mortality
8 Counting the hungry: latest estimates
10 Undernourishment, poverty and development
12 Hunger hotspots

14 Special feature
14 The vulnerability of mountain environments and mountain people

20 Towards the Summit commitments
20 Acting to combat hunger
22 Addressing the risk factors common to conflict and food insecurity
24 Confronting the causes of malnutrition:
the hidden challenge of micronutrient deficiencies
26 Land reform and secure land tenure:
keys to food security and sustainable rural development
28 Financing for development:
the critical role of hunger reduction and agricultural development

30 The way ahead
Combating hunger contributes to achieving other Millennium Development Goals

31 Tables
Towards the World Food Summit target

To put it bluntly, the state of food security in the world is not good. In each of the three previous editions of this report, the basic message has been essentially the same. Each year, we have reported a mixture of good news and bad news. The good news has been that the number of undernourished people in the developing world continues to decline. The bad news has been that the decline has been too slow, that our progress has been falling far short of the pace needed to reduce the number of hungry people by half by the year 2015 – the goal set at the World Food Summit (WFS) in 1996 and echoed in the Millennium Development Goals.

This year we must report that progress has virtually ground to a halt. Our latest estimates, based on data from the years 1998–2000, put the number of undernourished people in the world at 840 million, of whom 799 million live in developing countries. That figure represents a decrease of barely 2.5 million per year over the eight years since 1990–92, the period used as the starting point for the drive launched at the World Food Summit.

If we continue at the current pace, we will reach the WFS goal more than 100 years late, closer to the year 2150 than to the year 2015. Clearly, that is simply unacceptable.

To put it another way, in order to make up for the lagging progress to date and reach the World Food Summit goal on time, we must now strive to reduce the number of hungry people by half by the year 2015 – the goal set at the World Food Summit (WFS) in 1996 and echoed in the Millennium Development Goals.

where hunger is most widespread, as documented in this report.

And what would this investment buy? The Anti-Hunger Programme outlines a twin-track approach to reduce the number of hungry people rapidly and sustainably. It would provide access to food and deliver immediate relief to those most desperately in need, more than 200 million hard-core hungry people. And it would channel investment into sustainable agriculture and rural development, elevating productivity, incomes and hope in the rural areas in the developing world where more than three-quarters of the world’s poor and hungry people live. The proposal also suggests key elements of a policy framework that would maximize the impact of these investments by inducing complementary flows of private investment and enabling the poor and hungry to realize their full development potential.

We do not have the excuse that we cannot grow enough or that we do not know enough about how to eliminate hunger. What remains to be proven is that we care enough, that our expressions of concern in international fora are more than rhetoric, that we will no longer accept and ignore the suffering of 840 million hungry people in the world or the daily death toll of 25,000 victims of hunger and poverty.

We already produce more than enough food to provide an adequate diet for everyone. The Plan of Action of the 1996 World Food Summit set out clearly what needs to be done. The Anti-Hunger Programme suggests practical, affordable measures for translating the Plan of Action’s sound concepts and worthy principles into immediate, effective action.

There can be no excuse for further delay. Hunger can be defeated. But only if we demonstrate our commitment by mobilizing a concerted and adequately financed campaign. Governments, the international community, civil society and non-governmental organizations and the private sector have to work together, as an international alliance against hunger, to ensure that all people enjoy the most fundamental of human rights – the right to food that is essential to their very survival and existence.

Jacques Diouf
