

Alert No. 31 (19 September 2013)

1. Transforming Rural Livelihoods in Africa: How can land and water management contribute to enhanced food security and address climate change adaptation and mitigation? Nakuru, Kenya 20-25 October 2013

The Soil Science Society of East Africa (SSSEA) in collaboration with African Soil Science Society (ASSS) invite participation at a conference intended to critically analyze Land and Water Management (LWM) technologies, innovative products and services; and strategies benefiting small-scale agriculture in Africa. This will be the 6th ASSS Conference. A particular focus of this joint conference deals with the contribution of LWM in the Agricultural Production Value Chains, addressing threats and opportunities associated with climate change, and scaling up of proven technologies for transformational impact on the livelihoods of African small-scale farmers. In addition, land use planning and policy will be addressed during this conference. In line with the Comprehensive Africa Agriculture Development Programme (CAADP's) goal of eliminating hunger and reducing poverty through agriculture, the conference touches on the pillars relating to sustainable land management; market access; increasing food supply and reducing hunger

Theme

Transforming Rural Livelihoods in Africa: How can land and water management contribute to enhanced food security and address climate change adaptation and mitigation?

For further information: Barrack Okoba (okoba2000@yahoo.com)

Please see the [attached](#) for registration,

2. Conservation Agriculture Equipment Manufacturers and Inputs Suppliers Workshop; Diamond Jubilee Hall; Dar-es-Salaam Tanzania; 28-29 November 2013.

“Enhancing Farmers’ access to Conservation Agriculture Equipment Services”

The workshop intends to bring together stakeholders from within the Eastern and Southern Africa countries (Angola, Botswana, Zambia, Malawi, South Africa, Zimbabwe, Lesotho, Swaziland, Botswana, Mozambique, Tanzania, Kenya and Uganda) to establish the CA equipment supply chain players, the services they provide, challenges faced and opportunities to unlock them to foster growth in the sector through formation of a CoP. Specific emphasis will be on the CA equipment manufacturers based in the sub-regions.

The workshop objectives include: (i) To facilitate formation and networking of a CoP for CA equipment manufacturers, suppliers and service providers comprising CA

equipment manufacturers, repair workshops, importers, hire service providers, and financial institutions from East and Southern Africa; (ii) To guide manufacturers on compliance to the standards, principles and guidelines of clients (with reference to those of FAO) for prequalifying to quality assurance by peers and international tenders; (iii) To develop a practical roadmap for expanding the development, manufacturing, supply, spare and repair servicing of CA equipment and (iv) To Participate and create business opportunities through the Tanzania Trade Fair.

For more information, contact: info@act-africa.org

3. Africa Congress on Conservation Agriculture (ACCA-1), 18-21 March 2014, Lusaka Zambia. Registration now open

Purpose of the **First African Congress for Conservation Agriculture (1st ACCA)** is to bring together key CA stakeholders, including farmers and their organizations, from the continent to interact and co-own a permanent CA knowledge and information sharing platform that takes into account the needs of farmers and for increased benefits from CA technologies.

Themes:

- i. Growing more with less – the future of sustainable intensification
- ii. Weather proofing agriculture - the adaptation of farming practices to address climate variability
- iii. Increasing Conservation Agriculture adoption - how innovative technology and approaches can drive greater adoption of conservation systems around the world

Register at:

<http://act-africa.org/events.php?com=68&com2=67&item=109#.Ud0UPaxp0xF>

4. Green Carbon Conference, 1-3 April 2014, Brussels, Belgium

The Conference is jointly organized by the European Conservation Agriculture Federation (ECAAF), and the French Institute for Sustainable Agriculture (IAD) and promoted by the Life + AGRICARBON project.

Please find [attached](#) the Conference announcement where you can find the relevant information regarding this event. The Conference website with further details is: www.greencarbon-ca.eu

5. 6th World Congress of Conservation Agriculture to be held June 22-26, 2014, in Winnipeg, Manitoba, Canada

The 6th World Congress of Conservation Agriculture will be held June 22-26, 2014, in Winnipeg, Manitoba, Canada. Learn more at www.ctic.org/WCCA

The 6th WCCA announces registration is now open at: <https://www.ctic.org/registration/22/step/0/>

Concurrent session tracks will explore the following areas of conservation agriculture:

- Track 1: Growing with less – the future of sustainable intensification
- Track 2: Weatherproofing agriculture – the adaptation of farming practices to address climate variability
- Track 3: Increasing conservation adoption – how innovative technology and approaches can drive greater adoption of conservation systems around the world.

19. **Up-dating Conservation Agriculture Data Base in AquaStat, FAO**

The CA land area data base is updated periodically based on the feedback received from our regular sources of information and is posted in AquaStat. The latest figures can be seen at the FAO CA-Website at (<http://www.fao.org/ag/ca/6c.html>).

We are updating the CA land area data base displayed in AquaStat (www.fao.org/ag/ca), and are contacting our regular sources of information in the next few weeks. However, anyone else who would like to provide information on the land area under CA systems at the national level would be most welcome.

Ideally, we would appreciate receiving from you the CA area information at the sub-national level (by state, province or region), together with any relevant historical information on adoption (such as when was CA introduced; duration under CA – x ha under 3 yrs, y ha between 3 and 6 yrs, z ha more than 6 yrs), cropping pattern, farm size, agro-ecology, constraints, etc.

For the recording purpose please adhere to the reference quantification of the CA definition on the FAO-CA website (<http://www.fao.org/ag/ca/6c.html>):

1. **Minimum Soil Disturbance:** Minimum soil disturbance refers to low disturbance no-tillage and direct seeding. The disturbed area for seeding must be less than 15 cm wide or less than 25% of the cropped area (whichever is lower). There should be no periodic tillage that disturbs a greater area than the aforementioned limits. Area under strip tillage can be included only if the disturbed area is less than the above set limits.

2. **Maintenance of organic soil cover:** Three categories are distinguished: 30-60%, >60-90% and >90% ground cover, measured immediately after the direct seeding/planting operation. For this data base, area with less than 30% cover is not considered as being under CA.

3. **Crop rotation/association:** Rotation/association should involve at least 3 different crops. However, repetitive wheat or maize or rice cropping that meets requirements 1 and 2 above is not an exclusion factor for the purpose of this data collection, but rotation/association is recorded where practiced.

We would further like to stress that the database counts actual land area under annual crops with CA (permanent no-till). No-till area by crop will not be recorded to avoid double recording of the same land area.

Area under perennial crop systems including orchards and permanent pastures will be recorded separately. If there is CA land area under perennial crop systems in the country, please include the information as separate categories at the sub-national level (by state, province or region), together with any relevant historical information on adoption (such as when was CA introduced; duration under CA – x ha under 3 yrs, y ha between 3 to 6 yrs, z ha more than 6 yrs), cropping pattern, farm size, agro-ecology, constraints, etc.
