The Training Material on Conservation Agriculture (CA) is integrated by the following items:

- Posters: 3 units, A0 size
- Photo Guide: one set of 14 pictures (A3 size) illustrating important points indicated in the posters to be used by the trainer jointly with the posters.
- Leaflets: a foldable brochure summarizing the information included in posters and pictures (90cmx13cm). The leaflet is meant to be distributed to trainees and public in general.
- Aluminum stand and transport bag (optional)

All materials are available in English and Sesotho version, both high and low resolution.

These materials have been harmonized through the CA Task Force (CATF) in Lesotho integrating Government, UN and NGOs, ensuring consistency in the messages provided by all actors among communities. These posters are to be used by extension staff, teachers and civil society trainers in their interaction with communities, students, leaders and other gatherings. They provide a clear story line with visual references to conduct more efficient and effective training.

420 training kits were produced (285 in Sesotho and 135 in English). Over 400 kits have been distributed to all Agricultural Resource Centres in Lesotho, schools (primary, secondary), universities and among members of the CATF.

How to use the CA Training Materials:

In the posters, reference is made (through an icon representing a camera) to the relevant visual aid so the trainers can illustrate more clearly the concept they are explaining.
1. Posters

Pic. 1 – Posters 1 & 2
2. Photo-guide

The photo-guide is a compilation of 14 photos/slides that complement the posters’ information.
3. Leaflet

50,000 leaflets were produced in 2013-2014 (42,000 in Sesotho and 8,000 in English). Each of the 18,500 beneficiaries of the Emergency and Resilience Programme received a CA leaflet in Sesotho during the agricultural inputs’ distributions.

The leaflets are still available in the 68 Agricultural Resources Centres in Lesotho and they are being distributed among school teachers, students (high schools and/or university) and any other farmer who shows interest in practicing Conservation Agriculture.
4. Final product

The Conservation Agriculture Training Material was distributed to partners as shown in the following pictures:
