

FAO COUNTRY PROFILES

The FAO Country Profiles portal provides immediate access to the most relevant information on food and agriculture at a national level. This portal brings together country data and information from FAO, other UN agencies and partners such as the World Bank.

Single entry point

The FAO Country Profiles portal offers a quick and easy way to retrieve information about countries from a single entry point. Users can access up-to-date fact sheets, statistics, publications, maps, news and events, as well as links to government web sites.

Data at your fingertips

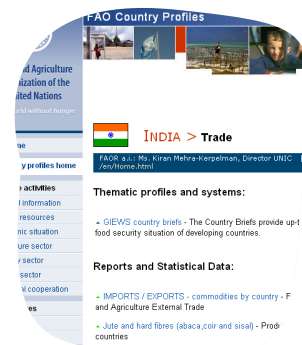

- Fact sheets and databases
- Statistics
- News and events
- Maps
- Publications
- FAO contacts
- Contacts in the country

Worldwide access

Decision-makers around the world have quick access to rich, reliable and up-to-date content thanks to the FAO Country Profiles portal.

Easy to find content

Each country profile groups information by FAO core activities, such as natural resources, agriculture, fisheries or forestry. Global issues are also covered and these include topics of particular interest, such as climate change, emergencies, food security and trade.

More than a snapshot

The geopolitical ontology implemented in the FAO Country Profiles describes, manages and exchanges data related to geopolitical entities such as countries, territories and regions. It includes, among others, names, codes, coordinates, statistical indicators and other data related to countries and regions. The portal makes this important resource, and various related services, available to users and systems.
