## FOREWORD

---

This report is issued on an annual basis to Members and Observers of the Sub-Group on Bananas of the Intergovernmental Group on Bananas and Tropical Fruits.

It is prepared by the **Market and Policy Analyses of Raw Materials, Horticulture and Tropical (RAMHOT) Products Team**, Trade and Market Division, FAO, Rome, and the tables contained bring together the information available to FAO, supplemented by data obtained from other sources in particular with regard to preliminary estimates.

The **Market and Policy Analyses of Raw Materials, Horticulture and Tropical (RAMHOT) Products Team** provides economic data and analyses on major agricultural raw materials and horticultural and tropical products. Commodities covered under the Team include, **bananas and tropical fruits, citrus fruits, cotton, hides and skins, jute, kenaf and allied fibres, sugar, and tea**. The Team also undertakes market reviews, outlook appraisals and projections, and provides assistance to developing countries in designing and implementing national policies for those agricultural commodities which enter into international trade.

The report is available at the following FAO website:  
<http://www.fao.org/economic/est/est-commodities/bananas/en/>

# Banana market review 2012-2013

## 1. Developments in banana trade

### *Exports*

In 2012<sup>1</sup> the volume of global gross banana exports reached a record high of 16.5 million tonnes, 1.1 million tonnes (or 7.3 percent) above 2011 level. The increase is primarily explained by the growth of exports from Latin America and the Caribbean from 12.5 to 13.0 million tonnes, despite the poor performance of Ecuador. In Ecuador, the largest banana exporter in the world, banana exports shrank as flooding damaged the crop, reducing the output by 416 000 tonnes, or 5.6 percent, relative to 2011. The resulting 410 000 tonnes decline in shipments from Ecuador was more than offset by vigorous exports from other countries, in particular those in Central America.

Data for 2012 show a remarkable shift from exports originating in **South America** towards greater exports from **Central America** and Mexico. While exports from South America declined by 6.4 percent relative to 2011, Central America and Mexico expanded their combined export volumes by 22.1 percent, possibly in anticipation of trade preferences for Central American bananas in the European market as part of the Association Agreement. As a result, the average share of South America in global banana exports has declined from 50.2 percent in 2007-2011 to 43.6 percent in 2012, while the share of Central America and Mexico increased from 29.4 percent to 33.4 percent.

Costa Rica's export quantity reached 2.1 million tonnes in 2012, 126 000 tonnes higher than in 2011, overtaking Colombia as the second most important exporter in Latin America. In 2012 banana exports from Colombia dropped by 4.2 percent, from 1.91 in 2011 to 1.83 million tonnes, mainly due to the spread of Moko disease. Guatemala's exports have also surpassed those of Colombia, standing at 1.9 million tonnes in 2012 - an increase of 23.2 percent (362 000 tonnes) compared to 2011. In Honduras, export volumes marked an astonishing 75 percent growth between 2011 and 2012, reaching a record 901 000 tonnes in 2012 or double the 2003 exports. Mexico also registered an important increase in shipments, from 178 000 tonnes in 2011 to 308 000 tonnes in 2012. Peru is another dynamic exporter, which had almost no exports prior to 2000 and reached 124 000 tonnes in 2012, or 13.8 percent above shipments made in 2011, most of which were fair trade and organic bananas grown by smallholder associations.

In the **Caribbean**, exports continued to be dominated by the Dominican Republic, which, apart from Belize, is the only country among the Caribbean ACP countries

---

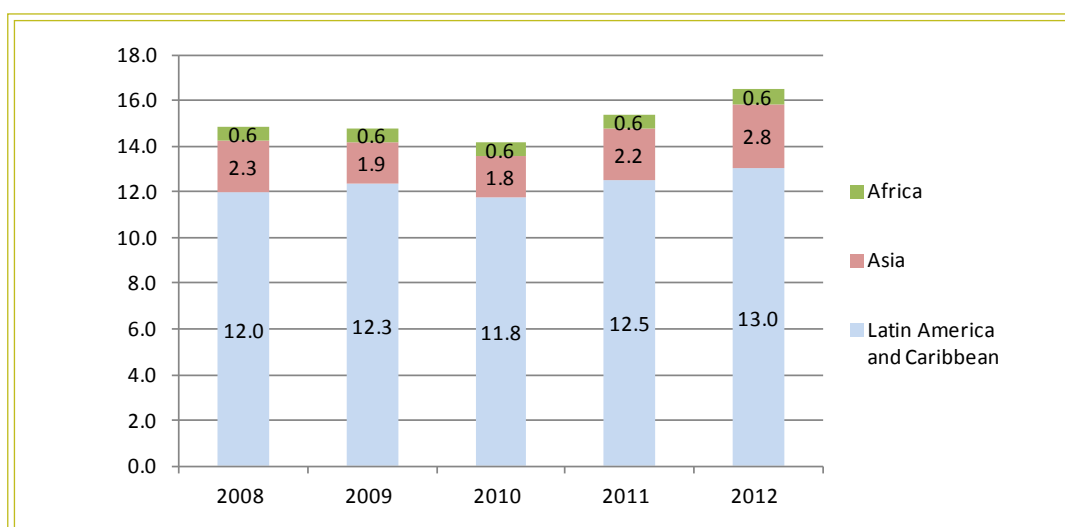

<sup>1</sup> Provisional data received from the countries and complemented with UN Comtrade data.

where bananas continue to be a major export despite the preference erosion in the European Union (EU) market, thanks to the strong focus on organic and fair trade bananas. Nevertheless, following a period of dynamic growth from 2000 to 2011, in 2012 Dominican banana exports declined by 2.2 percent to 297 000 tonnes. Other Caribbean countries have maintained very low volumes of exports, continuing the declining trend of recent years. Jamaica's exports have virtually disappeared since 2008, and all production is now directed to the domestic market. Exports from other Caribbean countries excluding Dominican Republic have also registered a steady decline as a result of a combination of preference erosion on exports to the EU and climatic disasters that have severely undermined production. The combined exports from the Caribbean other than Dominican Republic plummeted from 88 000 tonnes in 2009 to 21 000 tonnes in 2011. In 2012 a slight recovery is estimated to take place, reflecting primarily an expansion in exports from Saint Lucia from 6 200 tonnes to 12 100 tonnes.

Exports from **Asia** showed a remarkable recovery: After substantial declines in exports between 2006 and 2010, which were driven by shrinking exports from the Philippines, the volume of exports from the region rose 25.6 percent in 2011 and 27.1 percent in 2012, reaching almost 2.82 million tonnes, well above the previous record of 2.4 million tonnes in 2006. Because of this recovery, the Philippines returned to being the second largest exporter of bananas in the world after Ecuador. With the remarkable growth rates in both 2011 and 2012, the Philippines reached the peak of its export performance in 2012 at 2.6 million tonnes, corresponding to 93.9 percent of all exports from Asia.

**Africa's** exports, which accounted for 3.9 percent of global banana shipments, grew by 2.4 percent in 2012 as exports reached 649 000 tonnes. Côte d'Ivoire, the largest exporter in the region, shipped 339 000 tonnes of bananas in 2012, or 6.0 percent more than in 2011, while exports from Cameroon, the second largest African exporter, declined by 1.0 per cent to 246 000 tonnes.

**Figure 1 Banana exports by region 2008-2012, million tonnes**

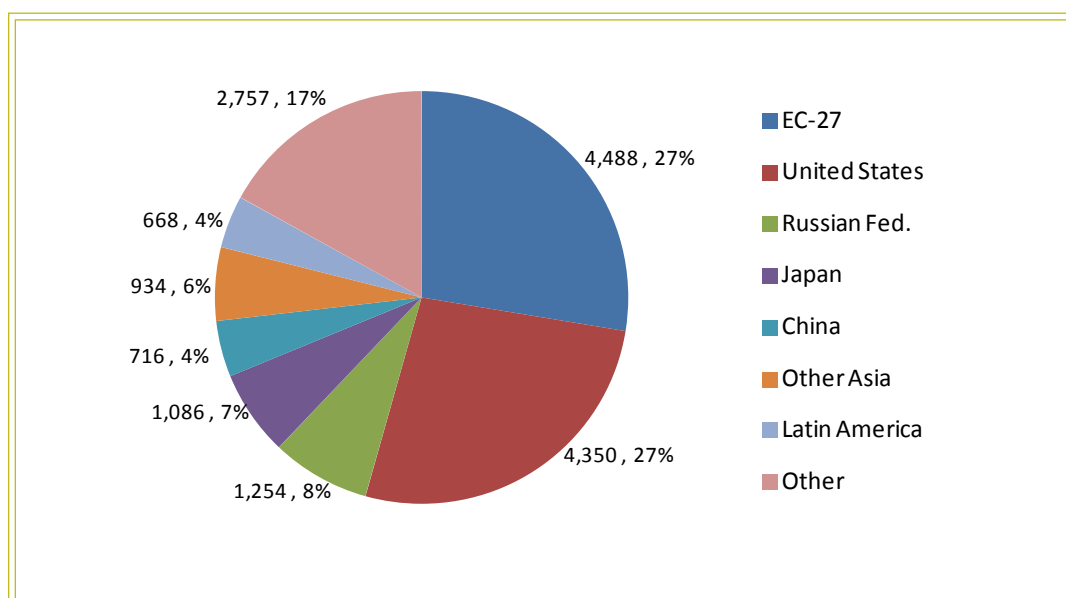

## Imports

The United States and EC-27 each imported approximately 27 percent of all bananas traded internationally in 2012, while other importers operated at a much smaller scale. After a record high of almost 1.31 million tonnes of bananas imported by Russia in 2011, when purchases grew by 22.4 percent, those in 2012 declined by 4.1 percent to approximately 1.26 million tonnes. A similar situation is observed in China: After a rapid expansion of banana imports over the past four years, they declined from the record high of 910 000 tonnes in 2011 to 716 000 tonnes in 2012, corresponding to a 21.3 percent drop, mostly due to the increase in domestic production. Japan's imports registered a moderate growth of 2.1 percent and reached almost 1.1 million tonnes in 2012.

**Figure 2 Distribution of global imports by market, 2012 (thousand tonnes and share in global imports)**

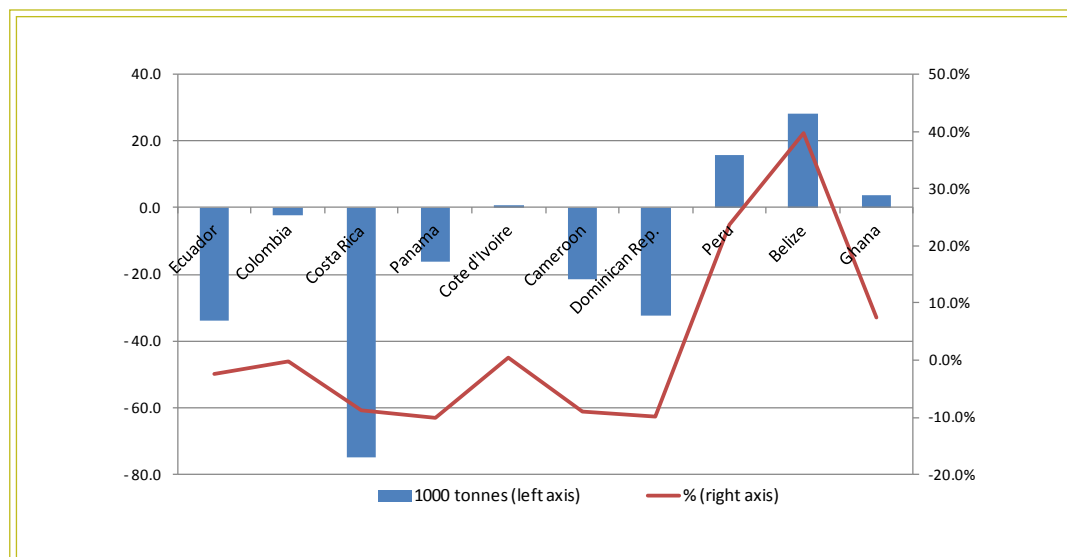

Weak demand in the EU was the main feature of the banana market in 2012. According to the provisional data, in 2012 EC-27 banana imports declined to approximately 4.49 million tonnes (115 000 tonnes less than in 2011), the lowest level since 2006. Most of the EU's banana suppliers were affected by the decline, but Ecuador, Costa Rica and the Dominican Republic registered largest decreases in export quantities. In part, this drop was driven by an increase in bananas produced in the EU, from 612 000 tonnes to 649 000 tonnes. However, the decline also reflected a drop in per capita consumption, from 10.4 kg in 2011 to 10.2 kg in 2012<sup>2</sup>. Furthermore, the appreciation of the United States (US) dollar constrained the demand for "dollar bananas". Among the major exporters to the EU market, only Peru, Belize and Ghana increased their exports to the region.

<sup>2</sup> FruiTrop No. 210. April 2013. CIRAD

Figure 3 Change in EU's banana imports from 2011 to 2012, by origin

European bananas are mostly grown on the Canary Islands (Spain), where production increased by 24 000 tonnes in 2012, and Guadeloupe and Martinique (France), where the total production increased by 9 000 tonnes. Minor quantities are also produced in Cyprus, Greece and Portugal. Bananas grown within the EU accounted for about 12.6 percent of total EU consumption in 2012. At the same time, the share of most-favoured-nation (MFN) bananas consumed in the EU was 68.3 percent, while consumption of bananas imported from the African, Caribbean and Pacific Group of States (ACP) accounted for 19.1 percent<sup>3</sup>.

US imports, on the contrary, showed dynamic growth in 2012, increasing for the third consecutive year. Import volumes increased by 227 000 tonnes or 5.5 percent relative to 2011, reflecting strong US demand for bananas. Since domestic banana production in the US is negligible, net imports provide a good approximation for total per capita consumption, which increased from 11.6 kg in 2010 to 13.2 kg in 2011 and further to 13.8 in 2012<sup>4</sup>. As a result, imports registered a record 4.35 million tonnes of bananas, nearly as much as the EC-27. US imports from Ecuador showed a considerable decline of 18 percent, or 159 000 tonnes compared to 2011, reflecting primarily lower output of bananas in Ecuador. This decline was more than offset by vigorous imports from other sources and especially imports from Central America and Mexico, which increased by 326 000 tonnes. This was consistent with the overall performance of these exporters. Mexico's exports of bananas to the US registered a particularly strong growth rate at 50 percent, corresponding to an additional 75 000 tonnes compared to 2011. Imports from Colombia and Honduras also demonstrated a large increase.

<sup>3</sup> Bananas other than plaintains - Fact sheet. European Commission, Directorate-General for Agriculture and Rural Development. September 2013 ([ec.europa.eu/agriculture/bananas/fact-sheet\\_en.pdf](http://ec.europa.eu/agriculture/bananas/fact-sheet_en.pdf)).

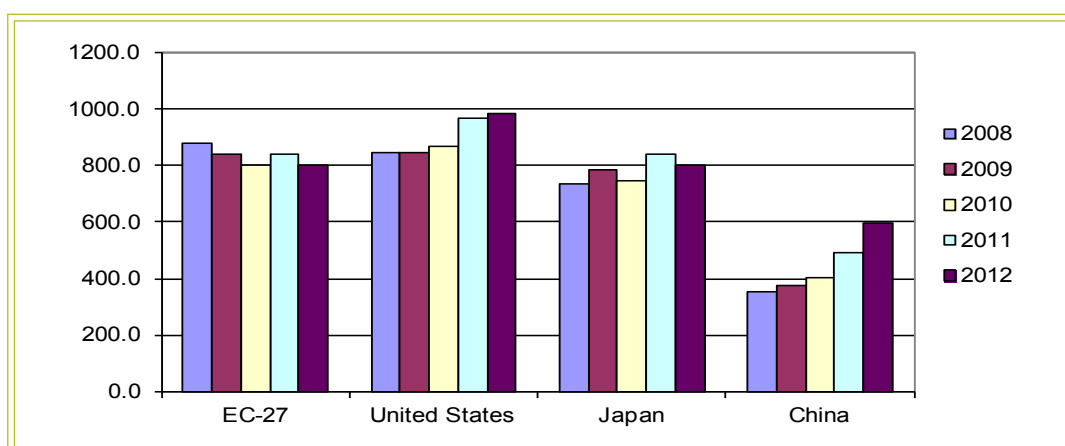

<sup>4</sup> A smaller increase is also observed in per capita consumption of citrus fruits (source: <http://www.fas.usda.gov/psdonline>).

## 2. Banana prices

### Import prices

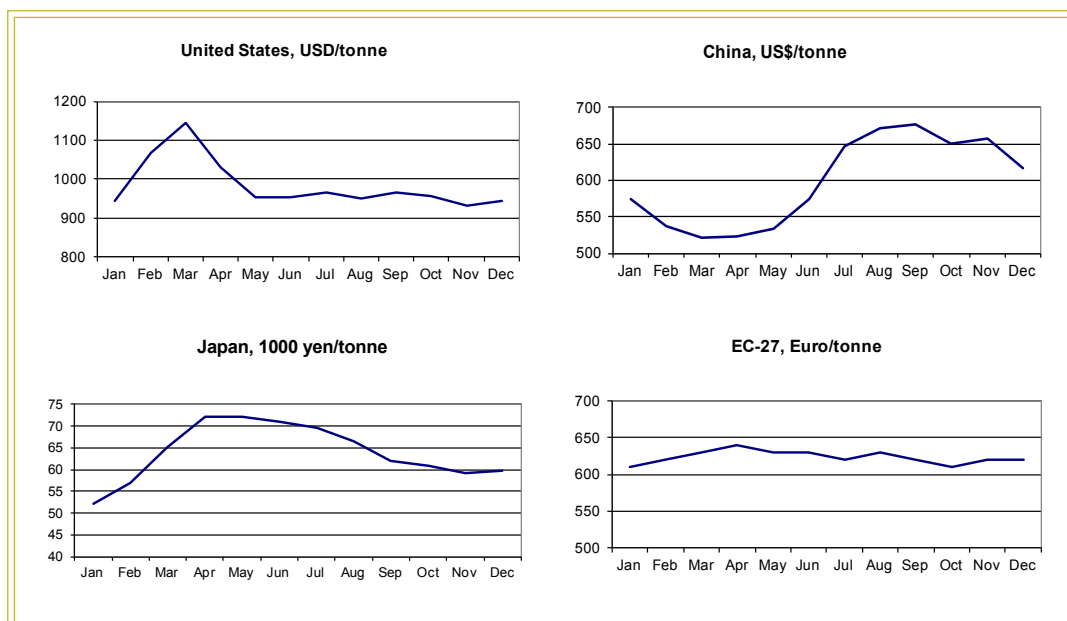

EU's average import price in 2012 increased from 604 euros/tonne in 2011 to 623 euros/tonne, fluctuating mildly between 600 and 650 euros/tonne throughout the year. The increase, however, was driven mainly by a stronger US dollar against the euro, while the demand remained sluggish. In US dollar terms, the EU import price actually decreased from USD 840 to USD 801 per tonne.

**Figure 4 Average annual import prices in EC-27, Japan and United States, 2008-2012, USD/tonne**

In the US, on the other hand, the strong demand put upward pressure on import prices, and they reached a record USD 984/tonne on average in 2012, or 1.7 percent above last year's level. Prices were particularly high during February, March and April 2012, exceeding USD 1 000/tonne. Import prices in Japan declined from an average of 67 250 yen/tonne in 2011 to 63 983 yen/tonne in 2012, corresponding to a 4.9 percent decline. In dollar terms, the reduction has been similar, and the average price stood at USD 802/tonne, almost identical to the EU import price. A strong seasonal variation, also observed in previous years, marked the prices in Japan during 2012: prices in April and May were almost one-third higher than those in January and February. In contrast, import prices in China, expressed in US dollars, tend to increase in the second half of the year. Between 2011 and 2012, the average annual import price in China showed a remarkable improvement from USD 490 to USD 599 per tonne.

**Figure 5 Monthly import prices in selected countries, 2012**

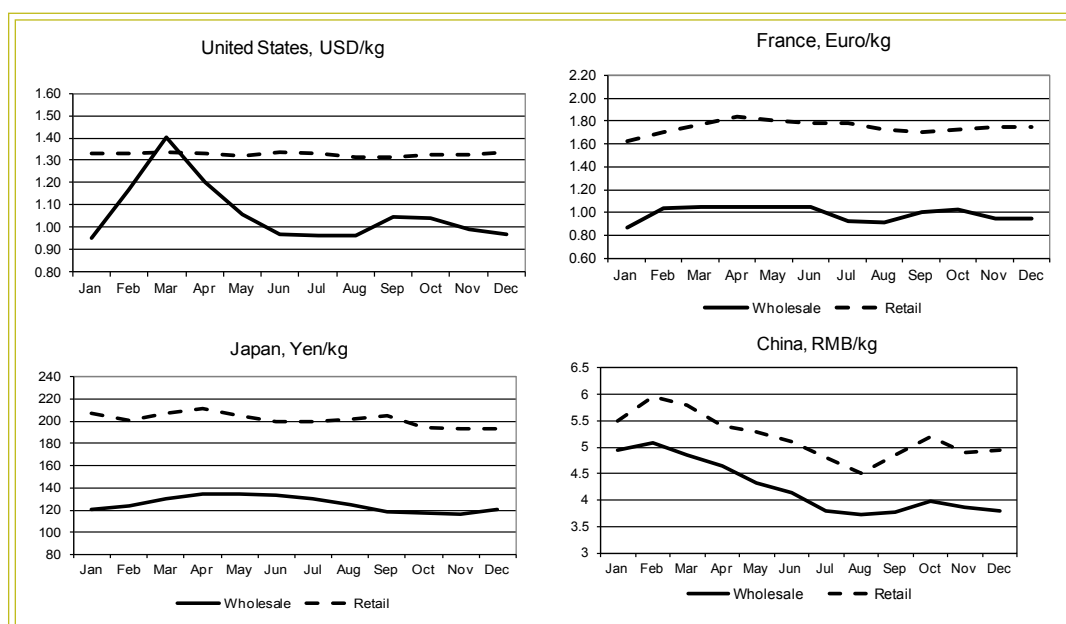

### *Wholesale and retail prices*

US retail prices remained practically flat throughout 2012 at approximately USD 1.33/kg, although varied substantially during the first half of 2012, peaking in March-April. On average, wholesale prices increased by 6.5 percent in 2012 compared to 2011, while retail prices actually decreased 1.3 percent. This apparent contradiction could be explained by the fact that supermarkets spread temporary losses from higher wholesale prices across other products that they sell while maintaining the prices of bananas for their consumers low, which is a common marketing strategy.

During 2012, wholesale and retail prices in France increased by 11.2 and 2.6 percent, respectively, relative to 2011, with little fluctuation throughout the year. The average wholesale price was 0.99 euros/kg, while the retail price was 1.74 euros/kg. In Japan, where marketing margins are very high, the decline in import prices in the second half of the year was only partially transmitted to wholesale and retail prices. Compared to 2011, average wholesale prices in Japan declined by 5.2 percent, while retail prices declined 8.1 percent. Wholesale and retail prices in China also experienced a slump despite the increase in import prices, by 7.9 and 4.5 percent, respectively. Domestic prices seemed to fluctuate in a similar manner throughout the year, with a substantial decline during the first half of the year and partial recuperation in the second.

**Figure 6 Monthly wholesale and retail prices in selected importing countries, 2012**

### 3. Policy developments

The banana trade disputes between the EU and the Latin American banana producing countries officially ended in 2012. The longest series of disputes in the history of the World Trade Organization (WTO), dating back to 1992, was concluded on 8 November 2012 by the signing of the Geneva Agreement on Trade in Bananas which was negotiated in 2009 between the EU and Latin American banana producers. At the core of the agreement was the adoption of new commitments on MFN tariffs on bananas by the EU. As the first step, in 2009 the EU reduced its import tariff from 176 to 148 euros/tonne. The maximum tariff rates are then set to decline, reaching 114 euros/tonne in 2017 at the earliest or 2019 at the latest (see Table 1).

**Table 1 EU's MFN tariff reduction schedule under the banana agreement**

	Tariff rates €/tonne
15 December 2009–31 December 2010	148 €/tonne
1 January 2011	143 €/tonne
1 January 2012	136 €/tonne
1 January 2013	132 €/tonne
1 January 2014	127 €/tonne
1 January 2015	122 €/tonne
1 January 2016	117 €/tonne
1 January 2017	114 €/tonne

In return for MFN tariff reduction by the EU, the US and Latin American countries agreed to cease all legal disputes against the EU at the WTO and not demand any additional cuts for bananas in the Doha Round negotiations on agriculture. At the average import price of 623 euros/tonne in 2012, the MFN tariff of 136 euros/tonne was equivalent to 21.8 percent *ad-valorem* duty.

Compared to the MFN tariff, EU duties on bananas from Colombia, Peru and Central American countries have been reduced as part of the trade deals in the Association Agreements that these countries have signed with the EU. Since 1 August 2013, the free trade provisions of the Agreements are applied to imports from Colombia, Honduras, Nicaragua and Panama, while preferential trade arrangements between the EU and Peru have been in force since March 2013. Under these arrangements, the preferential tariff for these countries was set at 124 euros/tonne in 2013 and will be gradually reduced to 75 euros/tonne by 2020. The same provisions would apply to Costa Rica, Guatemala and El Salvador in the coming months. Mexico is benefiting from an import quota of 2 000 tonnes with an intra-quota duty of 70 euros/tonne.

ACP banana suppliers who have an Economic Partnership Agreement (EPA) with the EU, benefit from duty and quota free access to the EU market. All current banana suppliers in the ACP<sup>5</sup> have concluded negotiations on either a full or interim EPA and are therefore exempt from any import duties on bananas. However, apart from some of the African exporters, ACP producers do not have the economies of scale to compete with banana suppliers from South and Central America. The situation is exacerbated by the lack of strategic partnerships along the value chain (in the exporter, wholesaler and retailer segments), except for the Windward Islands which market their bananas through their own distribution company.

The gradual reduction in the MFN tariff and preferential duties on bananas from Latin American countries entails preference erosion for the ACP countries. So far, it appears that the implications for ACP banana exports to the EU have been rather subdued, with the exception of some of the Caribbean countries, where preference erosion contributed to a decline already underway. No sizable expansion of exports from Latin America to the EU has been registered after the agreement on bananas was reached. The EU's imports from the majority of Latin American countries decreased in 2012 due to weak demand. Among the ACP countries, the performance has been mixed. While countries like Belize managed to substantially expand their exports to the EU, others, like Cameroon, have seen their export share decrease. Moreover, some ACP countries, like Côte d'Ivoire, managed to diversify their exports destinations, with significant growth in exports accounted for by the expansion in shipments to destination outside the EU.

However, preference erosion remains a cause of concern for many ACP countries. To help them adjust to the new trade regime by either boosting the competitiveness of their banana sector or diversifying into other productive activities, the EU is providing financial support to these countries through the Banana Accompanying Measures (BAM). In total 190 million euros were allocated. These support measures

---

<sup>5</sup> Belize, Cameroon, Ivory Coast, Dominica, Dominican Republic, Ghana, Grenada, Jamaica, Saint Lucia, Saint Vincent and the Grenadines and Suriname.

were proposed by the European Commission in March 2010. However, the process of adopting BAM as a legal instrument has been protracted as the Council and the European Parliament (EP) engaged in a series of extended debates on the proposal. An agreement was finally reached at the end of 2011, providing long awaited legal basis for the BAM. However, the calls for project proposals to be supported with BAM have only been launched in 2013.

The beneficiary countries are those which exported more than 10 000 tonnes per year on average over the past decade: Cameroon, Côte d'Ivoire and Ghana in Africa; and Belize, Dominica, Dominican Republic, Jamaica, Saint Lucia, Saint Vincent and the Grenadines and Suriname in the Caribbean.

**Table 2 BAM allocation by country, € million**

	Min	Max
Belize	20.5	23.0
Cameroon	44.0	49.0

#### 4. Current situation and short-term outlook

Global supplies of bananas in 2013 could be severely affected by difficult crop prospects in Ecuador and the Philippines. In Ecuador output projections indicate a further decline in 2013 as the area under cultivation has shrunk. Government estimates show planted area fell from 200 000 hectares in January 2012 to 171 000 hectares in February 2013. This decline, in part, reflects the pessimistic outlook of Ecuadorian producers, since their bananas will struggle to remain competitive in the European market where practically all other exporters will be paying a preferential tariff, while Ecuador continues to pay an MFN duty rate. In the Philippines, weather conditions have negatively affected banana production: About one quarter of the banana crop in the Philippines was destroyed by Typhoon Bopha in December 2012<sup>6</sup>. Shipments of bananas from Central America and Colombia, on the other hand, will remain solid, aided by the entry into force of the preferential duty rates charged on exports to the EU. Exports from Colombia are expected to recover once the campaign to eradicate Moko is successfully completed.

<sup>6</sup> The devastating typhoon Haiyan that swept the Philippines in early November 2013 largely spared the Philippines major banana producing region.

The demand for bananas in both the EU and Russia seem to recover in 2013, as imports are showing promising signs: During the first 9 months of 2013 import quantities in the EU and Russia increased by 5.6 and 5.7 percent relative to the same period in 2012, respectively<sup>7</sup>. US imports are also likely to grow in 2013 as monthly imports have been consistently above those of 2012 in both value and volume. Overall, during the first three quarters of 2013, the volume of US imports increased 4.6 percent.

In 2013 the import prices in the US seemed to have stabilized at a somewhat lower level compared to the record prices in 2012. The average US import price during the first 6 months of 2013 stood at USD 923/tonne, or 7.4 percent lower than during the same period in 2012. This is still well above the average import prices prevalent in the EU, although some countries, like France, are showing a tendency towards higher prices in 2013. Overall, prices in the EU are expected to remain firm and close to the 2012 level.

The ACP countries will continue to enjoy preferential access to the EU market, although the preferential margin *vis-à-vis* the major exporters, such as Colombia and Costa Rica, will be shrinking over time as the free trade agreements with these countries enter into force. Unless Ecuador enters into new negotiations with the EU, it will continue paying higher tariffs than its major competitors, undermining Ecuador's export opportunities. While the gap between the MFN tariff and the preferential tariff of Colombia, for example, was not that high in 2013 (132 euros/tonne versus 124 euros/tonne), the difference will increase substantially by 2020, unless a new reduction on the MFN tariff is achieved as part of multilateral trade talks on agriculture. At current import prices in the EU, by 2020 Ecuador would be paying 18 percent in *ad-valorem* tariff equivalent, while the preferential rate for Colombia, Peru and Central America would be 12 percent.

---
