JOINT FAO/WHO FOOD STANDARDS PROGRAMME
CODEX COMMITTEE ON PESTICIDE RESIDUES

51st Session
Macao SAR, P.R. China, 8-13 April 2019

PROPOSED MAXIMUM RESIDUE LIMITS FOR PESTICIDES IN FOOD AND FEED

Comments at Step 3 in reply to CL 2018/97-PR submitted by
Australia, Brazil, Canada, Chile, Egypt and Sri Lanka

STEPS IN THE CCPR-CODEX PROCEDURE

Step 1  Recommendation of priority compounds by CCPR, involving the Ad Hoc Working group on Priorities

Step 2  First evaluation of the compound by the Joint FAO/WHO Meeting on Pesticide Residues; estimation of an ADI and of MRLs (draft MRLs or proposed Codex MRLs)

Step 3  Submission of the proposed Codex MRLs to governments for a first round of comments

Step 4  First discussion of the proposed MRLs by the CCPR in the light of the comments received

Step 5  Submission of the proposed Codex MRLs to the Codex Alimentarius Commission in the light of the CCPR-discussion, for consideration

Step 6  Submission of the proposed Codex MRLs to governments for a second round of comments

Step 7  Final discussion of the proposed Codex MRLs by the CCPR in the light of comments received

Step 8  Consideration by the CAC in view of adoption of the proposal as Codex MRL (CXL)

Step 5/8  The proposed codex MRL is submitted to the Commission at Step 5; as there seems to be no controversy and no need for further discussion at Steps 6 and 7, omission of these Steps is recommended to the Commission

Guideline Levels (GLs) will not proceed beyond Step 4 of the procedure.

General comments

Chile

General Comments: Chile supports all the recommendations made by the JMPR, as a scientific advisory body to the Codex Committee, and therefore the advancement to the corresponding Step with the aim of its early adoption.

Rationale: It is important for the Codex to advance in the study and determination of MRLs of those active substances which are regularly used.

Egypt

Egypt appreciates the approach taken by JMPR in the determination of acceptable daily intakes, short-term dietary intakes, acute reference doses, recommended maximum residue limits and supervised trials median residue. Egypt agrees on the recommendations of the JMPR for pesticide maximum residue limits at Step 3 of the Codex Procedure.

<tr>
<td></td>
<td>Brazil</td>
<td>Conducted short-term dietary risk assessment for compounds/commodities reported on CL 2018/97-PR. The risk assessment methodology was based on WHO/FAO guidelines. The individual food consumption and body weight of people older than 10 years was based on the Brazilian household budget survey report released in 2009. Based on the results of the short-term dietary risk assessment, Brazil has a concern regarding the MRL proposed for lettuce on compound pyraclostrobin. It is worth mention that Anvisa considered 0.03 mg/kg bw as ARfD.</td>
</tr>
</tbody>
</table>
Canada
Canada acknowledges that the JMPR recommended maximum residue levels, for pome fruits, various legume vegetables and tuberous and corm vegetables, are lower than the Canadian MRLs for the same crop subgroups/groups based on different data (EU vs North America) and science policies at the time the Canadian MRLs were established. Canada has no objection to the remaining JMPR recommended maximum residue levels.

Fludioxonil (211)

Australia
Australia supports advancement of the MRLs to Step 5/8.

Canada
Canada acknowledges the differences between the JMPR recommended maximum residue levels for dry chickpeas and lentils based on different science policies at the time the Canadian MRLs were established.

Madipropamid (231)

Australia
Australia supports advancement of the MRLs to Step 5/8.

Canada
Canada has no objection to the JMPR recommended maximum residue levels for the new uses. Mandipropamid was recently registered in Canada for foliar use on a variety of crops. See Evaluation Report ERC2009-01, Mandipropamid Technical Fungicide and Proposed Registration Decision PRD2012-23, Mandipropamid for details.

Fluopyram (243)

Australia
Australia supports advancement of the MRLs to Step 5/8.

Canada
Canada acknowledges that the JMPR recommended maximum residue level for the Tomatoes crop subgroup is lower than the Canadian MRL for the same crop subgroup based on different crop field trial data (field vs greenhouse). Fluopyram was recently registered for use on various horticultural and field crops. See PRD2016-05: Fluopyram for details.

Sulfoxaflor (252)

Australia
Australia supports advancement of the MRL to Step 5/8.

Canada
Canada has no objection to the JMPR recommended maximum residue levels. Sulfoxaflor was recently registered for use on various crops/crop groups. See PRD2015-08: Sulfoxaflor for details.

Chlorfenapyr (254)

Australia
Australia supports advancement of the MRLs to Step 5/8.

Canada
Canada acknowledges that the recommended maximum residue levels for the new uses of peppers and tomatoes are lower than the Canadian MRL for fruiting vegetables based on different crop field trial data.

Sri Lanka
Local recommendations: Not registered in SL
Remarks:
Chilli
Considering 20g chilli powder (imported treated powder) consumption/day by a 60 kg bw person the daily intake will not exceed ADI.

Tea
If daily consumption of 0.2L of tea (using 25g of tea powder) is considered (with 12 mg/kg STMR) in worst case (unprocessed, etc) the dietary intake of a 60 kg bw person is 0.005 mg/kg. It does not exceed the ADI.
Fluxapyroxad (256)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended maximum residue levels for the new uses.

Benzovindiflupyr (261)

**Australia**
Australia supports advancement of the MRL to Step 5/8.

**Canada**
Canada supports the JMPR recommendation to extrapolate the dry bean and dry pea Codex MRLs to the entire crop subgroups but notes that the recommended maximum residue level for the dry bean subgroup is lower than the Canadian MRL for the entire pulses subgroup.

Benzovindiflupyr was recently registered in Canada for use on various crops/crop groups. See PRD2015-07: Benзовиндифлупир for details.

Cyantraniliprole (263)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada acknowledges that the JMPR recommended maximum residue level for the new use of Fruiting vegetables, cucurbits group is lower than the Canadian MRL for cucurbit vegetables based on different crop field trial data (field vs greenhouse). For grapes, the difference between the JMPR recommended maximum residue level and the Canadian MRL is also the crop field trial data. Cyantraniliprole was recently registered in Canada for use on various crops/crop groups. See PRD2013-09: Cyantraniliprole for details.

Sri Lanka
Local recommendations: Not yet registered. Trials are underway.

Local recommendations for commodities in CL 2018/97-PR: Local recommendations might be made on fruiting vegetables and cucurbits

Remarks: Considering the worst case scenario of consuming 250g of vegetables by an adult (60 kg bw) and kid (30 kg bw) per day, the dietary intakes are 0.001 and 0.002 respectively.

Cyazofamid (281)

**Australia**
Australia supports advancement of the MRL to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended maximum residue levels for the new uses.

Lufenuron (286)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended maximum residue levels for the new uses. Lufenuron is not registered for use in Canada, nor have any import MRLs been established.

Isofetamid (290)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada acknowledges that the JMPR recommended maximum residue level for the new use of Caneberries crop subgroup is lower than the Canadian MRL for the same crop subgroup based on different science policies at the time the Canadian MRL was established. Canada has no objection to the remaining JMPR recommended maximum residue levels. Isofetamid was recently registered for use on various crops/crop groups. See PRD2014-19: Isofетамид for details.
Oxathiapiprolin (291)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended maximum residue levels. Oxathiapiprolin was recently registered for use on various crops/crop groups. See [PRD2015-22: Oxathiapiprolin](#) for details.

Ethiprole (304)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended ADI, ARfD and maximum residue levels.

**Sri Lanka**
Local recommendations: Rice/ potato.

Local recommendations for commodities in CL 2018/97-PR: Rice

Remarks: Considering 0.75kg daily consumption of husked rice by a 60 kg bw person the dietary intake is 0.001 mg/kg (worst case considered – Ex. Unprocessed rice consumption).

The total dietary intake may not exceed ADI with residues coming from other sources (ex-poultry).

Fenpicoxamid (305)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended ADI, ARfD and maximum residue level.

Fluazinam (306)

**Canada**
Canada supports the JMPR decision not to conduct a dietary risk assessment due to the lack of critical toxicology information.

**Egypt**
Egypt proposes to consider the values of EU pesticides database for Fluazinam as detailed in the following link [http://ec.europa.eu/food/plant/pesticides/eu-pesticides-database/public/?event=activesubstance.detail&language=EN&selectedID=1373](http://ec.europa.eu/food/plant/pesticides/eu-pesticides-database/public/?event=activesubstance.detail&language=EN&selectedID=1373)

Mandestrobin (307)

**Canada**
Canada supports the JMPR decision to postpone the residue evaluation of the compound to the 2019 Meeting on the basis that significant information was provided during the 2018 Meeting which could not be processed in the time remaining. Mandestrobin was recently registered for use on various crops/crop groups. See PRD2016-03: Mandestrobin for details.

Norflurazon (308)

**Australia**
Australia supports advancement of the MRLs to Step 5/8.

**Canada**
Canada has no objection to the JMPR recommended ADI, ARfD and maximum residue levels. Norflurazon is not registered for use in Canada, nor have any import MRLs been established.
