Agenda Item 6

**RVDF/23 INF/01
May 2016**

**JOINT FAO/WHO FOOD STANDARDS PROGRAMME
CODEX COMMITTEE ON RESIDUES OF VETERINARY DRUGS IN FOODS
Twenty-third Session
Houston, Texas, United States of America, 17 – 21 October 2016**

**INFORMATION DOCUMENT FOR SUPPORT OF THE DISCUSSION ON THE MAXIMUM RESIDUES LIMITS
AND RISK MANAGEMENT RECOMMENDATIONS FOR VETERINARY DRUGS**

Prepared by the Codex Secretariat

INTRODUCTION

This working document is in support to the discussion on the residues of veterinary drugs in foods of the 23rd Session of the Codex Committee on Residues of Veterinary Drugs in Foods (CCRVDF). The document includes:

- Part 1 - Codex Maximum Residue Limits (MRLs) and Risk Management Recommendations (RMRs) for Veterinary Drugs as adopted by the Codex Alimentarius Commission as its 38th Session (July 2015); and
- Part 2 - Draft and proposed draft MRLs and RMRs.

Part 1

CODEX MAXIMUM RESIDUE LIMITS FOR VETERINARY DRUGS IN FOODS
Updated as at the 38th Session of the Codex Alimentarius Commission (July 2015)

ABAMECTIN (anthelmintic agent)				
JECFA Evaluation: 45 (1995); 47 (1996)				
Acceptable Daily Intake : 0-2 µg/kg body weight (1997) Established for the sum of abamectin and (Z)-8,9 isomer by the 1997 JMPR.				
Residue Definition: Avermectin B1a.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Liver	100	26 th (2003)	
Cattle	Kidney	50	26 th (2003)	
Cattle	Fat	100	26 th (2003)	

ALBENDAZOLE (anthelmintic agent)				
JECFA Evaluation: 34 (1989)				
Acceptable Daily Intake: 0-50 µg/kg body weight (34 th JECFA, 1989).				
Residue Definition: Except milk, 2-aminosulfone metabolite; Milk, not yet identified.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Not specified	Muscle	100	20 th (1993)	
Not specified	Liver	5000	20 th (1993)	
Not specified	Kidney	5000	20 th (1993)	
Not specified	Fat	100	20 th (1993)	
Not specified	Milk (µg/l)	100	20 th (1993)	

AMOXICILLIN (antimicrobial agent)				
JECFA Evaluation: 75 (2011)				
Acceptable Daily Intake: 0-0.07 µg/kg body weight on the basis of microbiological effects (75 th JECFA, 2011).				
Estimated Dietary Exposure The 75 th JECFA (2001) did not calculate an EDI for amoxicillin owing to the small number of quantifiable residue data points. Using the model diet of 300 g muscle, 100 g live, 50 g kidney, 50 g fat and 1.5 liter of milk with the MRLs recommended, the theoretical maximum daily intake (TMDI) is 31 µg/person, which represents 74% of the upper bound of the ADI.				
Residue Definition: Amoxicillin				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	50	35 th (2012)	
Cattle	Liver	50	35 th (2012)	
Cattle	Kidney	50	35 th (2012)	
Cattle	Fat	50	35 th (2012)	
Cattle	Milk	4	35 th (2012)	
Sheep	Muscle	50	35 th (2012)	
Sheep	Liver	50	35 th (2012)	
Sheep	Kidney	50	35 th (2012)	
Sheep	Fat	50	35 th (2012)	
Sheep	Milk	4	35 th (2012)	
Pigs	Muscle	50	35 th (2012)	
Pigs	Liver	50	35 th (2012)	
Pigs	Kidney	50	35 th (2012)	
Pigs	Fat/Skin	50	35 th (2012)	

AVILAMYCIN (antimicrobial agent)				
JECFA Evaluation: 70 (2008)				
Acceptable Daily Intake: 0-2 mg/kg body weight on the basis of a NOAEL of 150 mg avilamycin activity/kg body weight per day and a safety factor of 100 and rounding to one significant figure (70 th JECFA, 2008).				
Residue Definition: Dichloroisoeverninic acid (DIA).				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Pigs	Muscle	200	32 nd (2009)	
Pigs	Liver	300	32 nd (2009)	
Pigs	Kidney	200	32 nd (2009)	
Pigs	Fat/Skin	200	32 nd (2009)	
Chicken	Muscle	200	32 nd (2009)	
Chicken	Liver	300	32 nd (2009)	
Chicken	Kidney	200	32 nd (2009)	
Chicken	Fat/Skin	200	32 nd (2009)	
Turkey	Muscle	200	32 nd (2009)	
Turkey	Liver	300	32 nd (2009)	
Turkey	Kidney	200	32 nd (2009)	
Turkey	Fat/Skin	200	32 nd (2009)	
Rabbits	Muscle	200	32 nd (2009)	
Rabbits	Liver	300	32 nd (2009)	
Rabbits	Kidney	200	32 nd (2009)	
Rabbits	Fat/Skin	200	32 nd (2009)	

AZAPERONE (tranquilizing agent)				
JECFA Evaluation: 38 (1991); 43 (1994); 50 (1998); 52 (1999)				
Acceptable Daily Intake: 0-6 µg/kg body weight (50 th JECFA, 1998).				
Residue Definition: Sum of azaperone and azaperol.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Pig	Muscle	60	23 rd (1999)	
Pig	Liver	100	23 rd (1999)	
Pig	Kidney	100	23 rd (1999)	
Pig	Fat	60	23 rd (1999)	

BENZYL PENICILLIN/PROCAINE BENZYL PENICILLIN (antimicrobial agent)				
JECFA Evaluation: 36 (1990); 50 (1998)				
Acceptable Daily Intake: 30 µg-penicillin/person/day (50 th JECFA, 1998). Residues of benzylpenicillin and procaine benzylpenicillin should be kept below this level.				
Residue Definition: Benzylpenicillin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	50	23 rd (1999)	
Cattle	Liver	50	23 rd (1999)	
Cattle	Kidney	50	23 rd (1999)	
Cattle	Milk (µg/l)	4	23 rd (1999)	
Chicken	Muscle	50	23 rd (1999)	Applies to procaine benzylpenicillin only.
Chicken	Liver	50	23 rd (1999)	Applies to procaine benzylpenicillin only.
Chicken	Kidney	50	23 rd (1999)	Applies to procaine benzylpenicillin only.
Pig	Muscle	50	23 rd (1999)	
Pig	Liver	50	23 rd (1999)	
Pig	Kidney	50	23 rd (1999)	

CARAZOLOL (beta-adreniceptor-blocking agent)				
JECFA Evaluation: 38 (1991); 43 (1994); 52 (1999)				
Acceptable Daily Intake: 0-0.1 µg/kg body weight (43 rd JECFA, 1994). ADI based on the acute pharmacological effects of carazolol.				
Residue Definition: Carazolol.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Pig	Muscle	5	26 th (2003)	The concentration at the injection site two hours after treatment may result in an intake that exceeds the acute RfD and therefore, an appropriate withdrawal period should be applied.
Pig	Liver	25	26 th (2003)	
Pig	Kidney	25	26 th (2003)	
Pig	Fat/Skin	5	26 th (2003)	The concentration at the injection site two hours after treatment may result in an intake that exceeds the acute RfD and therefore, an appropriate withdrawal period should be applied.

CEFTIOFUR (antimicrobial agent)				
JECFA Evaluation: 45 (1995); 48 (1997)				
Acceptable Daily Intake: 0-50 µg/kg body weight (45 th JECFA, 1995).				
Residue Definition: Desfuroylceftiofur.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	1000	23 rd (1999)	
Cattle	Liver	2000	23 rd (1999)	
Cattle	Kidney	6000	23 rd (1999)	
Cattle	Fat	2000	23 rd (1999)	
Cattle	Milk (µg/l)	100	23 rd (1999)	
Pig	Muscle	1000	23 rd (1999)	
Pig	Liver	2000	23 rd (1999)	
Pig	Kidney	6000	23 rd (1999)	
Pig	Fat	2000	23 rd (1999)	

CHLORTETRACYCLINE/OXYTETRACYCLINE/TETRACYCLINE (antimicrobial agent)**JECFA Evaluation:** 45 (1995); 47 (1996); 50 (1998); 58 (2002)**Acceptable Daily Intake:** 0-30 µg/kg body weight (50th JECFA, 1998). Group ADI for chlortetracycline, oxytetracycline and tetracycline.**Residue Definition:** Parent drugs, singly or in combination.

Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	200	26 th (2003)	
Cattle	Liver	600	26 th (2003)	
Cattle	Kidney	1200	26 th (2003)	
Cattle	Milk (µg/l)	100	26 th (2003)	
Fish	Muscle	200	26 th (2003)	Applies only to oxytetracycline.
Giant prawn (<i>Paeneus monodon</i>)	Muscle	200	26 th (2003)	Applies only to oxytetracycline.
Pig	Muscle	200	26 th (2003)	
Pig	Liver	600	26 th (2003)	
Pig	Kidney	1200	26 th (2003)	
Poultry	Muscle	200	26 th (2003)	
Poultry	Liver	600	26 th (2003)	
Poultry	Kidney	1200	26 th (2003)	
Poultry	Eggs	400	26 th (2003)	
Sheep	Muscle	200	26 th (2003)	
Sheep	Liver	600	26 th (2003)	
Sheep	Kidney	1200	26 th (2003)	
Sheep	Milk (µg/l)	100	26 th (2003)	

CLENBUTEROL (adrenoceptor agonist)				
JECFA Evaluation: 47 (1996)				
Acceptable Daily Intake: 0-0.004 µg/kg body weight (47 th JECFA, 1996).				
Residue Definition: Clenbuterol.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	0.2	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Cattle	Liver	0.6	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Cattle	Kidney	0.6	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Cattle	Fat	0.2	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Cattle	Milk (µg/l)	0.05	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Horse	Muscle	0.2	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Horse	Liver	0.6	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Horse	Kidney	0.6	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.
Horse	Fat	0.2	26 th (2003)	Due to the potential abuse of this drug, the MRLs are recommended only when associated with a nationally approved therapeutic use, such as tocolysis or as an adjunct therapy in respiratory diseases.

CLOSANTEL (anthelmintic agent)				
JECFA Evaluation: 36 (1990); 40 (1992)				
Acceptable Daily Intake: 0-30 µg/kg body weight (40 th JECFA, 1992).				
Residue Definition: Closantel.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	1000	20 th (1993)	
Cattle	Liver	1000	20 th (1993)	
Cattle	Kidney	3000	20 th (1993)	
Cattle	Fat	3000	20 th (1993)	
Sheep	Muscle	1500	20 th (1993)	
Sheep	Liver	1500	20 th (1993)	
Sheep	Kidney	5000	20 th (1993)	
Sheep	Fat	2000	20 th (1993)	

COLISTIN (antimicrobial agent)				
JECFA Evaluation: 66 (2006)				
Acceptable Daily Intake: 0-7 µg/kg body weight (66 th JECFA, 2006).				
Residue Definition: Sum of colistin A and colistin B.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	150	31 st (2008)	
Cattle	Liver	150	31 st (2008)	
Cattle	Kidney	200	31 st (2008)	
Cattle	Fat	150	31 st (2008)	
Cattle	Milk	50	31 st (2008)	
Sheep	Muscle	150	31 st (2008)	
Sheep	Liver	150	31 st (2008)	
Sheep	Kidney	200	31 st (2008)	
Sheep	Fat	150	31 st (2008)	
Sheep	Milk	50	31 st (2008)	
Goat	Muscle	150	31 st (2008)	
Goat	Liver	150	31 st (2008)	
Goat	Kidney	200	31 st (2008)	
Goat	Fat	150	31 st (2008)	
Pig	Muscle	150	31 st (2008)	
Pig	Liver	150	31 st (2008)	
Pig	Kidney	200	31 st (2008)	
Pig	Fat	150	31 st (2008)	The MRL includes skin + fat
Chicken	Muscle	150	31 st (2008)	
Chicken	Liver	150	31 st (2008)	
Chicken	Kidney	200	31 st (2008)	
Chicken	Fat	150	31 st (2008)	The MRL includes skin + fat
Chicken	Eggs	300	31 st (2008)	
Turkey	Muscle	150	31 st (2008)	
Turkey	Liver	150	31 st (2008)	
Turkey	Kidney	200	31 st (2008)	
Turkey	Fat	150	31 st (2008)	The MRL includes skin + fat
Rabbit	Muscle	150	31 st (2008)	
Rabbit	Liver	150	31 st (2008)	
Rabbit	Kidney	200	31 st (2008)	
Rabbit	Fat	150	31 st (2008)	

CYFLUTHRIN (insecticide)				
JECFA Evaluation: 48 (1997)				
Acceptable Daily Intake: 0-20 µg/kg body weight (48 th JECFA, 1997).				
Residue Definition: Cyfluthrin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	20	26 th (2003)	
Cattle	Liver	20	26 th (2003)	
Cattle	Kidney	20	26 th (2003)	
Cattle	Fat	200	26 th (2003)	
Cattle	Milk (µg/l)	40	26 th (2003)	

CYHALOTHRIN (insecticide)				
JECFA Evaluation: 54 (2000); 58 (2002); 62 (2004)				
Acceptable Daily Intake: 0-5 µg/kg body weight (62 nd JECFA, 2004).				
Residue Definition: Cyhalothrin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	20	28 th (2005)	
Cattle	Liver	20	28 th (2005)	
Cattle	Kidney	20	28 th (2005)	
Cattle	Fat	400	28 th (2005)	
Cattle	Milk	30	28 th (2005)	
Pig	Muscle	20	28 th (2005)	
Pig	Liver	20	28 th (2005)	
Pig	Kidney	20	28 th (2005)	
Pig	Fat	400	28 th (2005)	
Sheep	Muscle	20	28 th (2005)	
Sheep	Liver	50	28 th (2005)	
Sheep	Kidney	20	28 th (2005)	
Sheep	Fat	400	28 th (2005)	

CYPERMETHRIN AND ALPHA-CYPERMETHRIN (insecticide)				
JECFA Evaluation: 62 (2004)				
Acceptable Daily Intake: JECFA established a common ADI of 0-20 µg/kg bw for both cypermethrin and alpha-cypermethrin (62 nd JECFA, 2004)..				
Residue Definition: Total of cypermethrin residues (resulting from the use of cypermethrin or alpha-cypermethrin as veterinary drugs).				
Species	Tissue	MRLs(µg/kg)	CAC	Note
Cattle	Muscle	50	29 th (2006)	
Cattle	Liver	50	29 th (2006)	
Cattle	Kidney	50	29 th (2006)	
Cattle	Fat	1000	29 th (2006)	
Cattle	Milk	100	29 th (2006)	
Sheep	Muscle	50	29 th (2006)	
Sheep	Liver	50	29 th (2006)	
Sheep	Kidney	50	29 th (2006)	
Sheep	Fat	1000	29 th (2006)	

DANOFLOXACIN (antimicrobial agent)				
JECFA Evaluation: 48 (1997)				
Acceptable Daily Intake: 0-20 µg/kg body weight (48 th JECFA, 1997).				
Residue Definition: Danofloxacin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	200	24 th (2001)	
Cattle	Liver	400	24 th (2001)	
Cattle	Kidney	400	24 th (2001)	
Cattle	Fat	100	24 th (2001)	
Chicken	Muscle	200	24 th (2001)	
Chicken	Liver	400	24 th (2001)	
Chicken	Kidney	400	24 th (2001)	
Chicken	Fat	100	24 th (2001)	Fat/skin in normal proportion.
Pig	Muscle	100	24 th (2001)	
Pig	Liver	50	24 th (2001)	
Pig	Kidney	200	24 th (2001)	
Pig	Fat	100	24 th (2001)	

DELTA METHRIN (insecticide)				
JECFA Evaluation: 52 (1999); 60 (2003)				
Acceptable Daily Intake: 0-10 µg/kg body weight (1982). Established by the 1982 JMPR.				
Residue Definition: Deltamethrin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	30	26 th (2003)	
Cattle	Liver	50	26 th (2003)	
Cattle	Kidney	50	26 th (2003)	
Cattle	Fat	500	26 th (2003)	
Cattle	Milk	30	26 th (2003)	
Chicken	Muscle	30	26 th (2003)	
Chicken	Liver	50	26 th (2003)	
Chicken	Kidney	50	26 th (2003)	
Chicken	Fat	500	26 th (2003)	
Chicken	Eggs	30	26 th (2003)	
Salmon	Muscle	30	26 th (2003)	
Sheep	Muscle	30	26 th (2003)	
Sheep	Liver	50	26 th (2003)	
Sheep	Kidney	50	26 th (2003)	
Sheep	Fat	500	26 th (2003)	

DERQUANTEL (anthelmintic agent)				
JECFA Evaluation: 75 (2011); 78 (2013)				
Acceptable Daily Intake: 0-0.3 µg/kg body weight on the basis of a lowest-observed-adverse-effect level (LOAEL) of 0.1 mg/kg body weight per day for acute clinical observations in dogs, consistent with antagonistic activity on the nicotinic acetylcholine receptors. A safety factor of 300 was applied to the LOAEL (75 th JECFA, 2011).				
Estimated Dietary Exposure: There were insufficient data to calculate an EDI, and the TMDI approach was used. Using the model diet and the MT:TR approach, these MRLs result in an estimated dietary exposure of 6.8 µg/person, which represents approximately 38% of the upper bound of the ADI (78 th JECFA, 2013).				
Residue Definition: Derquantel.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Sheep	Muscle	0.3	38 th (2015)	
Sheep	Liver	0.8	38 th (2015)	
Sheep	Kidney	0.4	38 th (2015)	
Sheep	Fat	7.0	38 th (2015)	

DEXAMETHASONE (glucocorticosteroid)				
JECFA Evaluation: 70 (2008)				
Acceptable Daily Intake: 0-0.015 µg/kg body weight (42 nd JECFA, 1995).				
Residue Definition: Dexamethasone.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	1.0	32 nd (2009)	
Cattle	Liver	2.0	32 nd (2009)	
Cattle	Kidney	1.0	32 nd (2009)	
Cattle	Milk (µg/l)	0.3	32 nd (2009)	
Pig	Muscle	1.0	32 nd (2009)	
Pig	Liver	2.0	32 nd (2009)	
Pig	Kidney	1.0	32 nd (2009)	
Horses	Muscle	1.0	32 nd (2009)	
Horses	Liver	2.0	32 nd (2009)	
Horses	Kidney	1.0	32 nd (2009)	

DICLAZURIL (antiprotozoal agent)				
JECFA Evaluation: 45 (1995); 50 (1998)				
Acceptable Daily Intake: 0-30 µg/kg body weight (50 th JECFA, 1998).				
Residue Definition: Diclazuril.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Poultry	Muscle	500	23 rd (1999)	
Poultry	Liver	3000	23 rd (1999)	
Poultry	Kidney	2000	23 rd (1999)	
Poultry	Fat/Skin	1000	23 rd (1999)	
Rabbit	Muscle	500	23 rd (1999)	
Rabbit	Liver	3000	23 rd (1999)	
Rabbit	Kidney	2000	23 rd (1999)	
Rabbit	Fat	1000	23 rd (1999)	
Sheep	Muscle	500	23 rd (1999)	
Sheep	Liver	3000	23 rd (1999)	
Sheep	Kidney	2000	23 rd (1999)	
Sheep	Fat	1000	23 rd (1999)	

DICYCLANIL (insecticide)				
JECFA Evaluation: 54 (2000); 60 (2003)				
Acceptable Daily Intake: 0-7 µg/kg body weigh (54 th JECFA, 2000).				
Residue Definition: Dicyclanil.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Sheep	Muscle	150	28 th (2005)	
Sheep	Liver	125	28 th (2005)	
Sheep	Kidney	125	28 th (2005)	
Sheep	Fat	200	28 th (2005)	

DIHYDROSTREPTOMYCIN/STREPTOMYCIN (antimicrobial agent)				
JECFA Evaluation: 43 (1994); 48 (1997); 52 (1999); 58 (2002)				
Acceptable Daily Intake: 0-50 µg/kg body weight (48 th JECFA, 1997). Group ADI for combined residues of dihydrostreptomycin and streptomycin.				
Residue Definition: Sum of dihydrostreptomycin and streptomycin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	600	24 th (2001)	
Cattle	Liver	600	24 th (2001)	
Cattle	Kidney	1000	24 th (2001)	
Cattle	Fat	600	24 th (2001)	
Cattle	Milk	200	26 th (2003)	
Chicken	Muscle	600	24 th (2001)	
Chicken	Liver	600	24 th (2001)	
Chicken	Kidney	1000	24 th (2001)	
Chicken	Fat	600	24 th (2001)	
Pig	Muscle	600	24 th (2001)	
Pig	Liver	600	24 th (2001)	
Pig	Kidney	1000	24 th (2001)	
Pig	Fat	600	24 th (2001)	
Sheep	Muscle	600	24 th (2001)

DIMINAZENE (trypanocide)				
JECFA Evaluation: 34 (1989); 42 (1994)				
Acceptable Daily Intake: 0-100 µg/kg body weight (42 nd JECFA, 1994).				
Residue Definition: Diminazene.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	500	22 nd (1997)	
Cattle	Liver	12000	22 nd (1997)	
Cattle	Kidney	6000	22 nd (1997)	
Cattle	Milk (µg/l)	150	22 nd (1997)	Limit of quantitation of the analytical method.

DORAMECTIN (anthelmintic agent)				
JECFA Evaluation: 45 (1995); 52 (1999); 58 (2002); 62 (2004)				
Acceptable Daily Intake: 0-1 µg/kg body weight (58 th JECFA, 2002).				
Residue Definition: Doramectin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	10	22 nd (1997)	High concentration of residues at the injection site over a 35 day period after subcutaneous or intramuscular administration of the drug at the recommended dose.
Cattle	Liver	100	22 nd (1997)	
Cattle	Kidney	30	22 nd (1997)	
Cattle	Fat	150	22 nd (1997)	High concentration of residues at the injection site over a 35 day period after subcutaneous or intramuscular administration of the drug at the recommended dose
Cattle	Milk	15	29 th (2006)	Depending on the route and/or time of administration the use of doramectin in dairy cows may result in extended withdrawal periods in milk. This may be addressed in national/regional regulatory programmes.
Pig	Muscle	5	24 th (2001)	
Pig	Liver	100	24 th (2001)	
Pig	Kidney	30	24 th (2001)	
Pig	Fat	150	24 th (2001)	

EMAMECTIN BENZOATE (antiparasitic agent)**JECFA Evaluation:** 78 (2013)**Acceptable Daily Intake:** ADI of 0–0.5 µg/kg body weight established by the Joint FAO/WHO Meeting on Pesticide Residues (JMPR) in 2011, based on an overall no-observed-adverse effect level (NOAEL) of 0.25 mg/kg body weight per day for neurotoxicity from 14- and 53-week studies in dogs, supported by an overall NOAEL of 0.25 mg/kg body weight per day from 1- and 2-year studies in rats. An uncertainty factor of 500 was applied to the NOAEL, which includes an additional uncertainty factor of 5 to account for the steep dose–response curve and irreversible histopathological effects in neural tissues at the lowest-observed-adverse-effect level (LOAEL) in dogs, as used by JMPR and confirmed by the current Committee (78th JECFA, 2013).**Estimated Dietary Exposure:** 11 µg/person per day, which represents approximately 37% of the upper bound of the ADI (78th JECFA, 2013).**Residue Definition:** Emamectin B1a.

Species	Tissue	MRL (µg/kg)	CAC	Notes
Salmon	Muscle	100	38 th (2015)

Quail	Fat	100	32 nd (2009)	

MONEPANTEL (anthelmintic agent)				
JECFA Evaluation: 75 (2011); 78 (2013)				
Acceptable Daily Intake: 0-20 µg/kg body weight on the basis of a no-observed-adverse-effect level (NOAEL) of 1.8 mg/kg body weight per day considering liver effects in mice, and a safety factor of 100, with rounding to one significant figure (75 th JECFA, 2011).				
Estimated Dietary Exposure: Using the model diet and marker residue to total residue ratios of 1.00 for muscle and 0.66 for fat, liver and kidney, and applying a correction factor of 0.94 to account for the mass difference between monepantel sulfone (the marker residue) and monepantel, the EDI is 446 µg/person per day, which represents approximately 37% of the upper bound of the ADI (78 th JECFA, 2013).				
Residue Definition: Monepantel sulfone, expressed as monepantel.

PIRLIMYCIN (antimicrobial agent)				
JECFA Evaluation: 62 (2004)				
Acceptable Daily Intake: 0-8 µg/kg bw (62 nd JECFA, 2004).				
Residue Definition: Pirlimycin.				
Species	Tissue	MRLs (µg/kg)	CAC	Note
Cattle	Muscle	100	29 th (2006)	
Cattle	Liver	1000	29 th (2006)	
Cattle	Kidney	400	29 th (2006)	
Cattle	Fat	100	29 th (2006)	
Cattle	Milk	100	29 th (2006)	JECFA evaluated the effect of pirlimycin residues on starter cultures and for this reason recommended an MRL of 100 µg/kg of milk. Codex Members may therefore adapt national/regional MRLs in order to address this technological aspect for trade of fresh liquid milk intended for processing using starter culture.

PORCINE SOMATOTROPIN (production aid)				
JECFA Evaluation: 52 (1999)				
Acceptable Daily Intake: Not Specified (52 nd JECFA, 1999).				
Residue Definition: Not applicable.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Pig	Muscle	not specified	26 th (2003)	
Pig	Liver	not specified	26 th (2003)	
Pig	Kidney	not specified	26 th (2003)	
Pig	Fat	not specified	26 th (2003)	

PROGESTERONE (production aid)				
JECFA Evaluation: 25 (1981); 32 (1987); 52 (1999)				
Acceptable Daily Intake: 0-30 µg/kg body weight (52 nd JECFA, 1999).				
Residue Definition: Progesterone.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	unnecessary	21 st (2005)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health
Cattle	Liver	unnecessary	21 st (2005)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health
Cattle	Kidney	unnecessary	21 st (2005)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health
Cattle	Fat	unnecessary	21 st (2005)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health

RACTOPAMINE (production aid)				
JECFA Evaluation: 40 (1992); 62 (2004); 66 (2006)				
Acceptable Daily Intake: 0-1 µg/kg body weight (66 th JECFA, 2006).				
Residue Definition: Ractopamine.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	10	35 th (2012)	
Cattle	Liver	40	35 th (2012)	
Cattle	Kidney	90	35 th (2012)	
Cattle	Fat	10	35 th (2012)	
Pig	Muscle	10	35 th (2012)	
Pig	Liver	40	35 th (2012)	
Pig	Kidney	90	35 th (2012)	
Pig	Fat	10	35 th (2012)	The MRL includes skin + fat

SARAFLOXACIN (antimicrobial agent)				
JECFA Evaluation: 50 (1998)				
Acceptable Daily Intake: 0-0.3 µg/kg body weight (50 th JECFA, 1998).				
Residue Definition: Sarafloxacin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Chicken	Muscle	10	24 th (2001)	
Chicken	Liver	80	24 th (2001)	
Chicken	Kidney	80	24 th (2001)	
Chicken	Fat	20	24 th (2001)

SULFADIMIDINE (antimicrobial agent)				
JECFA Evaluation: 34 (1989); 38 (1991); 42 (1994)				
Acceptable Daily Intake: 0-50 µg/kg body weight (42 nd JECFA, 1994).				
Residue Definition: Sulfadimidine.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Milk (µg/l)	25	21 st (1995)	
Not specified	Muscle	100	21 st (1995)	
Not specified	Liver	100	21 st (1995)	
Not specified	Kidney	100	21 st (1995)	
Not specified	Fat	100	21 st (1995)	

TESTOSTERONE (production aid)				
JECFA Evaluation: 25 (1981); 32 (1987); 52 (1999)				
Acceptable Daily Intake: 0-2 µg/kg body weight (52 nd JECFA, 1999).				
Residue Definition: Testosterone.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	unnecessary	21 st (1995)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health.
Cattle	Liver	unnecessary	21 st (1995)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health.
Cattle	Kidney	unnecessary	21 st (1995)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health.
Cattle	Fat	unnecessary	21 st (1995)	Residues resulting from the use of this substances as a growth promoter in accordance with good animal husbandry practice are unlikely to pose a hazard to human health.

THIABENDAZOLE (anthelmintic agent)				
JECFA Evaluation: 40 (1992); 48 (1997); 58 (2002)				
Acceptable Daily Intake: 0-100 µg/kg body weight (40 th JECFA, 1992).				
Residue Definition: Sum of thiabendazole and 5-hydroxythiabendazole.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Cattle	Liver	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Cattle	Kidney	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Cattle	Fat	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Cattle	Milk (µg/l)	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Goat	Muscle	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Goat	Liver	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Goat	Kidney	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Goat	Fat	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Goat	Milk (µg/l)	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Pig	Muscle	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Pig	Liver	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Pig	Kidney	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Pig	Fat	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.

Sheep	Muscle	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Sheep	Liver	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Sheep	Kidney	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.
Sheep	Fat	100	21 st (1995)	The MRL also covers residues derived from feed containing the residues resulted from agricultural use.

TILMICOSIN (antimicrobial agent)				
JECFA Evaluation: 47 (1996); 54 (2000); 70 (2008)				
Acceptable Daily Intake: 0-40 µg/kg body weight (47 th JECFA, 1996).				
Residue Definition: Tilmicosin.				
Species	Tissue	MRL (µg/kg)	CAC	Notes
Cattle	Muscle	100	23 rd (1999)

CODEX RISK MANAGEMENT RECOMMENDATIONS FOR VETERINARY DRUGS IN FOODS

Updated as at the 38th Session of the Codex Alimentarius Commission (July 2015)

CARBADOX (growth promoter)

JECFA evaluation: 36th (1990) and 60th (2003) JECFA

CAC37 (2014)

Recommended risk management measures

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of carbadox or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of carbadox in food. This can be accomplished by not using carbadox in food producing animals.

CHLORAMPHENICOL (antimicrobial agent)

JECFA evaluation: 12th (1968), 32nd (1987), 42nd (1994) and 62nd (2004) JECFA

CAC37 (2014)

Recommended risk management measures

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of chloramphenicol or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of chloramphenicol in food. This can be accomplished by not using chloramphenicol in food producing animals.

CHLORPROMAZINE (tranquilliser agent)

JECFA evaluation: 38th (1991) JECFA

CAC37 (2014)

Recommended risk management measures

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of chlorpromazine or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of chlorpromazine in food. This can be accomplished by not using chlorpromazine in food producing animals.

DIMETRIDAZOLE (antiprotozoal agent)

JECFA evaluation: 34th (1989) JECFA

CAC38 (2015)

Recommended risk management measures

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of dimetridazole or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of dimetridazole in food. This can be accomplished by not using dimetridazole in food producing animals.

FURAZOLIDONE (antimicrobial agent)

JECFA evaluation: 40th (1992) JECFA

CAC37 (2014)

Recommended risk management measures

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of furazolidone or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of furazolidone in food. This can be accomplished by not using furazolidone in food producing animals.

IPRONIDAZOLE (antiprotozoal agent)**JECFA evaluation:** 34th (1989) JECFA**CAC38** (2015)**Recommended risk management measures**

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of ipronidazole or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of ipronidazole in food. This can be accomplished by not using ipronidazole in food producing animals.

MALACHITE GREEN (antifungal and antiprotozoal agent)**JECFA evaluation:** 70th (2008) JECFA**CAC37** (2014)**Recommended risk management measures**

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of malachite green or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of malachite green in food. This can be accomplished by not using malachite green in food producing animals.

METRONIDAZOLE (antiprotozoal agent)**JECFA evaluation:** 34th (1989) JECFA**CAC38** (2015)**Recommended risk management measures**

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of metronidazole or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of metronidazole in food. This can be accomplished by not using metronidazole in food producing animals.

NITROFURAL (antimicrobial agent)**JECFA evaluation:** 40th (1992) JECFA**CAC37** (2014)**Recommended risk management measures**

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of nitrofurazone or its metabolites¹ in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of nitrofurazone in food. This can be accomplished by not using nitrofurazone in food producing animals.

¹ Semicarbazide is not a unique indicator of nitrofurazone use and low levels can be associated with other legitimate sources.

OLAQUINDOX (antibacterial agent)**JECFA evaluation:** 36th (1990) and 42nd (1994) JECFA**CAC37** (2014)**Recommended risk management measures**

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of olaquinox or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of olaquinox in food. This can be accomplished by not using olaquinox in food producing animals.

RONIDAZOLE (antiprotozoal agent)**JECFA evaluation:** 34th (1989) and 42nd (1994) JECFA**CAC38** (2015)**Recommended risk management measures**

In view of the JECFA conclusions, although insufficient data were available or there was a lack of data to establish a safe level of residues of ronidazole or its metabolites in food representing an acceptable risk to consumers, significant health concerns were identified. For this reason, competent authorities should prevent residues of ronidazole in food. This can be accomplished by not using ronidazole in food producing animals.

STILBENES (growth promoter)**JECFA evaluation:** 5th (1960) JECFA**IARC evaluation:** monograph 100A (2012)**CAC37** (2014)**Recommended risk management measures**

In view of the available scientific information, there is no safe level of residues of stilbenes or their metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of stilbenes in food. This can be accomplished by not using stilbenes in food producing animals.

Part 2**DRAFT AND PROPOSED DRAFT MAXIMUM RESIDUE LIMITS FOR VETERINARY DRUGS IN FOODS****A) Currently under consideration by CCRVDF****LASALOCID SODIUM** (antiparasitic agent)

Acceptable Daily Intake (ADI): 0-5 µg/kg body weight on the basis of a NOAEL of 0.5 mg/kg body weight per day from a developmental toxicity study in rabbits and a multigeneration reproductive toxicity study in rats, with application of an uncertainty factor of 100 for interspecies and intraspecies variability (78th JECFA, 2013).

Estimated Dietary Exposure (EDI): 80 µg/person per day was calculated, which represents approximately 27% of the upper bound of the ADI (78th JECFA, 2013).

Residue Definition: Lasalocid A.

Species	Tissue	MRLs (µg/kg)	Step	JECFA
Chicken	Muscle	400	4	78
Chicken	Liver	1200	4	78
Chicken	Kidney	600	4	78
Chicken	Skin + Fat	600	4	78
Turkey	Muscle	400	4	78
Turkey	Liver	1200	4	78
Turkey	Kidney	600	4	78
Turkey	Skin + Fat	600	4	78
Quail	Muscle	400	4	78
Quail	Liver	1200	4	78
Quail	Kidney	600	4	78
Quail	Skin + Fat	600	4	78
Pheasant	Muscle	400	4	78
Pheasant	Liver	1200	4	78
Pheasant	Kidney	600	4	78
Pheasant	Skin + Fat	600	4	78

NOTE: The 78th JECFA extended the MRLs in chicken to turkey and quail and extrapolated the MRLs in chicken to pheasant. No information was available for duck, including on approved uses. As the compound is not registered for use in laying hens, according to the sponsor, it is not appropriate to recommend MRLs for egg

Keys for List of MRLs for Veterinary Drugs

Step: (r), revised MRL; (a), amended MRL; T, temporary MRL.

JECFA: Meeting number of the Joint FAO/WHO Expert Committee on Food Additives where the MRL was recommended/considered.

CCRVDF: Session number of the CCRVDF where the MRL was considered and Appendix number of its report where the MRL is contained.

IVERMECTIN (antiparasitic agent)**Acceptable Daily Intake (ADI):**

0-10 µg/kg body weight on the basis of a no-observed-adverse-effect level (NOAEL) of 0.5 mg/kg body weight per day for neurological effects (mydriasis) and retardation of weight gain in a 14-week dog study, with application of an uncertainty factor of 50 (5 for interspecies differences based on pharmacokinetic studies in dogs and humans and 10 for intraspecies differences). The previous ADI of 0-1 µg/kg body weight was withdrawn. (81st JECFA, 2015)

Acute Reference dose (ARfD):

0.2 mg/kg body weight, based on a NOAEL of 1.5 mg/kg body weight, the highest dose tested in a safety, tolerability and pharmacokinetics study in healthy human subjects, with application of an uncertainty factor of 10 for intraspecies variability. (81st JECFA, 2015)

Estimated chronic dietary exposure (GECDE): The estimated daily intake (EDI) is 38 µg/person per day, based on a 60 kg individual, which represents 6% of the upper bound of the ADI. The global estimate of chronic dietary exposure (GECDE) for the general population is 0.9 µg/kg body weight per day, which represents 9% of the upper bound of the ADI. The GECDE for children is 1.5 µg/kg body weight per day, which represents 15% of the upper bound of the ADI. The GECDE for infants is 1.3 µg/kg body weight per day, which represents 13% of the upper bound of the ADI. (81st JECFA, 2015)

Estimated Acute Dietary Exposure (GEADE): A combined analysis of all studies submitted showed that after 14 days, the maximum values of residues found at injection sites led to a Global Estimate of Acute Dose Exposure (GEADE) of 52 µg/kg bw for the general population and 87 µg/kg bw for children, corresponding, respectively, to 27% and 43% of the ARfD. (81st JECFA, 2015)

Residue Definition:Ivermectin B_{1a}.

Species	Tissue	MRLs (µg/kg) recommended by the 78 th JECFA			MRLs (µg/kg) recommended by the 81 st JECFA		
		Step	JECFA		Step	JECFA	
Cattle	Fat				400	3	81
Cattle	Kidney				100	3	81
Cattle	Liver				800	3	81
Cattle	Muscle	4	7	78	30	3	81

In shaded font are the MRLs held at Step 4 by CCRVDF22.

TEFLUBENZURON (insecticide)**Acceptable Daily Intake (ADI):**

0-5 µg/kg body weight on the basis of a lower 95% confidence limit on the benchmark dose for a 10% response (BMDL₁₀) of 0.54 mg/kg body weight per day for hepatocellular hypertrophy in male mice observed in a carcinogenicity study, with application of an uncertainty factor of 100 to account for interspecies and intraspecies variability. (81st JECFA, 2015)

Estimated chronic dietary exposure (GECDE): The EDI is 42.9 µg/person per day, on the basis of a 60 kg individual, which represents approximately 14% of the upper bound of the ADI. The GECDE for the general population is 1.6 µg/kg body weight per day, which represents 31% of the upper bound of the ADI. The GECDE for children is 2.1 µg/kg body weight per day, which represents 43% of the upper bound of the ADI. The GECDE for infants is 0.9 µg/kg body weight per day, which represents 18% of the upper bound of the ADI. (81st JECFA, 2015)

Residue Definition:

Teflubenzuron.

Species	Tissue	MRLs (µg/kg) recommended by the 81 st JECFA	Step	JECFA
Salmon	Fillet ^a	400	3	81
Salmon	Muscle	400	3	81

^a Muscle plus skin in natural proportion.

ZILPATEROL HYDROCHLORIDE (β 2-adrenoceptor agonist)

Acceptable Daily Intake (ADI): 0-0.04 μ g/kg body weight established at the seventy-eighth meeting (WHO TRS No. 988, 2014) and reaffirmed at the eighty-first meeting. (81st JECFA, 2015)

Acute Reference Dose (ARfD): 0.04 μ g/kg body weight based on a lowest-observed-adverse-effect level (LOAEL) of 0.76 μ g/kg body weight for acute pharmacological effects observed in a single-dose human study, with application of an uncertainty factor of 20, comprising a default uncertainty factor of 10 for human individual variability and an additional uncertainty factor of 2 to account for use of a LOAEL for a slight effect instead of a NOAEL. (81st JECFA, 2015)

Estimated Acute Dietary Exposure (GEADE): 1.9 μ g/day for the general population, which represents approximately 80% of the ARfD. The GEADE is 0.57 μ g/day for children, which represents approximately 94% of the ARfD. (81st JECFA, 2015)

Residue Definition: Zilpaterol (free base) in muscle, liver and kidney.

Species	Tissue	MRLs (μ g/kg) recommended by the 81 st JECFA	Step	JECFA
Cattle	Kidney	3.3	3	81
Cattle	Liver	3.5	3	81
Cattle	Muscle	0.5	3	81

B) MRLs held at Step 8 by the Codex Alimentarius Commission

BOVINE SOMATOTROPINS (production aid)						
JECFA Evaluation:		40 (1992); 50 (1998)				
Acceptable Daily Intake (ADI):		Not specified (1992) The ADI applies to somagrebove, sometribove, somavubove, somidobove				
Residue Definition:		Not applicable				
Species	Tissue	MRL (µg/kg)		Step	JECFA	CCRVDF
Cattle	Muscle	Not specified	1/	8	40, 50	7IV, 8II
Cattle	Liver	Not specified	1/	8	40	7IV, 8II
Cattle	Kidney	Not specified	1/	8	40	7IV, 8II
Cattle	Fat	Not specified	1/	8	40	7IV, 8II
Cattle	Milk	Not specified	1/	8	40	7IV, 8II

ADI "not specified" means that available data on the toxicity and intake of the veterinary drug indicate a large margin of safety for consumption of residues in food when the drug is used according to good practice in the use of veterinary drugs. For that reason, and for the reasons stated in the individual evaluation, the JECFA concluded that use of the veterinary drugs does not represent a hazard to human and that there is no need to specify a numerical ADI.

1/ MRL "not specified" means that available data on the identity and concentration of residues of the veterinary drug in animal tissues indicate a wide margin of safety for consumption of residues in food when the drug is used according to good practice in the use of veterinary drugs. For that reason, and for the reasons stated in the individual evaluation, the JECFA concluded that the presence of drug residues in the named animal product does not present a health concern and that there is no need to specify a numerical MRL.

PROPOSED DRAFT RISK MANAGEMENT RECOMMENDATIONS FOR VETERINARY DRUGS IN FOODS**(at step 3)**

GENTIAN VIOLET (antibacterial, antifungal and anthelmintic agent)

JECFA evaluation: 78th (2013) JECFA

Recommended risk management measures

OPTION 1

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of gentian violet or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of gentian violet in food. This can be accomplished by not using gentian violet in food producing animals.

OPTION 2

In view of the JECFA conclusions on the available scientific information, there is no safe level of residues of gentian violet or its metabolites in food that represents an acceptable risk to consumers. For this reason, competent authorities should prevent residues of gentian violet in food.
