INTRODUCTION

Codex Maximum Residue Limits are in most cases stated in terms of a specific whole raw agricultural commodity as it moves in international trade. In some instances, a qualification is included that describes the part of the raw agricultural commodity to which the maximum residue limit applies, for example, almonds on a shell-free basis and beans without pods. In other instances, such qualifications are not provided. Therefore, unless otherwise specified, the portion of the raw agricultural commodity to which the MRL applies and which is to be prepared as the analytical sample for the determination of pesticide residues is as described in the following table.

CLASSIFICATION OF COMMODITIES

GROUP 1 - ROOT AND TUBER VEGETABLES

Root and tuber vegetables are starchy foods derived from the enlarged solid roots, tubers, corms or rhizomes, mostly subterranean, of various species of plants. The entire vegetable may be consumed.

Root and Tuber vegetables:
- beets
- carrots
- celeriac
- parsnips
- potatoes
- radishes
- sugar beets
- sweet potatoes
- turnips
- yams

Whole commodity after removing tops. Wash the roots or tubers in cold running water, brushing gently with a soft brush to remove loose soil and debris, if necessary, and then dab lightly with a clean tissue paper to dry. For the carrots, after drying, the tops are carefully cut off with a knife by cutting through the bottom of the stem at the lowest point of attachment of the outer petioles. If an annulus of root tissue is thereby severed from hollow-crown roots, the material should be recombined with the roots.

GROUP 2 - BULB VEGETABLES

Bulb vegetables are pungent flavourful foods derived from the fleshy scale bulbs, or growth buds of alliums of the lily family (Liliaceae). The entire bulb may be consumed following removal of the parchment like skin.

Bulb vegetables:
- garlic
- leeks
- onions
- spring onions

Bulb/dry onions and garlic:
Whole commodity after removal of roots and whatever parchment skin is easily detached.
Leeks and spring onions:
Whole vegetable after removal of roots and adhering soil.

PORTION OF COMMODITIES TO WHICH MAXIMUM RESIDUE LIMITS APPLY AND WHICH IS ANALYZED

CAC/GL 41-1993
CLASSIFICATION OF COMMODITIES

PORTION OF COMMODITY TO WHICH
THE CODEX MRL APPLIES
(AND WHICH IS ANALYZED)

GROUP 3 - LEAFY VEGETABLES (EXCEPT BRASSICA VEGETABLES)

Leafy vegetables (except Group 4 vegetables) are foods derived from the leaves of a wide variety of edible plants including leafy parts of Group 1 vegetables. The entire leaf may be consumed. Leafy vegetables of the brassica family are grouped separately.

Leafy vegetables:
- beet leaves
- corn salad
- endive
- lettuce

Whole commodity after removal of obviously decomposed or withered leaves.

GROUP 4 - BRASSICA (COLE) LEAFY VEGETABLES

Brassica (cole) leafy vegetables are foods derived from the leafy parts, stems and immature inflorescences of plants commonly known and botanically classified as brassicas and also known as cole vegetables. The entire vegetable may be consumed.

Brassica leafy vegetables:
- broccoli
- Brussels sprouts
- cabbage
- cabbage, Chinese
- cabbage, red
- cabbage, Savoy
- cauliflower
- collards
- kales
- kohlrabi
- mustard greens

Whole commodity after removal of obviously decomposed or withered leaves. For cauliflower and headed broccoli analyse Brussels sprouts flower head and stems discarding leaves; for Brussels sprouts analyse “buttons” only.

GROUP 5 - STEM VEGETABLES

Stem vegetables are foods derived from the edible stems or shoots from a variety of plants.

Stem vegetables:
- artichoke
- celery
- chicory (witloof)
- rhubarb

Whole commodity after removal of obviously decomposed or withered leaves.

Rhubarb and asparagus: stems only.

Celery and asparagus: remove adhering soil (e.g., by rinsing in running water or by gentle brushing of the dry commodity).
CLASSIFICATION OF COMMODITIES

GROUP 6 - LEGUME VEGETABLES
Legume vegetables are derived from the dried or succulent seeds and immature pods or leguminous plants commonly known as beans and peas. Succulent forms may be consumed as whole pods or as the shelled product. Legume fodder is in Group 18.

Legume vegetables: beans, navy beans, broad beans, runner beans, dwarf beans, snap beans, French beans, soybeans, green beans, peas, kidney beans, cow peas, Lima beans, sugar peas

PORTION OF COMMODITY TO WHICH THE CODEX MRL APPLIES (AND WHICH IS ANALYZED)

Whole commodity.

GROUP 7 - FRUITING VEGETABLES - EDIBLE PEEL
Fruiting vegetables - edible peel are derived from the immature or mature fruits of various plants, usually annual vines or bushes. The entire fruiting vegetables may be consumed.

Fruiting vegetables - edible peel: cucumber, pepper, egg plant, summer squash, gherkin, tomato, okra

Whole commodity after removal of stems.

GROUP 8 - FRUITING VEGETABLES - INEDIBLE PEEL
Fruiting vegetables - inedible peel are derived from the immature or mature fruits of various plants, usually annual vines or bushes. Edible portion is protected by skin, peel or husk which is removed or discarded before consumption.

Fruiting vegetables - inedible peel: cantaloupe, squash, melon, watermelon, pumpkin, winter squash

Whole commodity after removal of stems.

GROUP 9 - CITRUS FRUITS
Citrus fruits are produced by trees of the rue family and characterized by aromatic oily peels, globular form, and interior segments of juice filled vesicles. The fruit is fully exposed to pesticides during the growing season. The fruit pulp may be consumed in succulent form and as a beverage.

The entire fruit may be used for preserving.

Citrus fruits: Whole commodity.
CLASSIFICATION OF COMMODITIES

GROUP 10 - POME FRUITS
Pome fruits are produced by trees related to the genus pyrus of the rose family (Rosaceae). They are characterized by fleshy tissue surrounding a core consisting of parchment like carpels enclosing the seed. The entire fruit, excepting the core, may be consumed in the succulent form or after processing.

Pome fruits:
- apple
- quince
- pear

GROUP 11 - STONE FRUITS
Stone fruits are produced by trees related to the genus prunus of the rose family (Rosaceae) characterized by fleshy tissue surrounding a single hard shelled seed. The entire fruit, except seed, may be consumed in a succulent or processed form.

Stone fruits:
- apricots
- nectarines
- cherries
- peaches
- sour cherries
- plums
- sweet cherries

GROUP 12 - SMALL FRUITS AND BERRIES
Small fruits and berries are derived from a variety of plants having fruit characterized by a high surface-weight ratio. The entire fruit, often including seed, may be consumed in a succulent or processed form.

Small fruits and berries:
- blackberries
- gooseberries
- blueberries
- grapes
- boisenberries
- loganberries
- cranberries
- raspberries
- currants
- strawberries
- dewberries

GROUP 13 - ASSORTED FRUITS - EDIBLE PEEL
Assorted fruits - edible peel are derived from the immature or mature fruits of a variety of plants, usually shrubs or trees from tropical or subtropical regions. The whole fruit may be consumed in a succulent or processed form.

Assorted fruits - edible peel:
- dates
- olives
- figs

PORTION OF COMMODITY TO WHICH THE CODEX MRL APPLIES (AND WHICH IS ANALYZED)

Whole commodity after removal of stems.

Whole commodity after removal of stems and stones but the residue calculated and expressed on the whole commodity without stem.

Whole commodity after removal of caps and stems. Currants: fruit with stems.

Dates and olives: whole commodity after removal of stems and stones but residue calculated and expressed on the whole fruit. Figs: Whole commodity.
**Classification of Commodities**

**GROUP 14 - ASSORTED FRUITS - INEDIBLE PEEL**

Assorted fruits - inedible peel are derived from the immature or mature fruits of different kinds of plants, usually shrubs or trees from tropical or subtropical regions. Edible portion is protected by skin, peel or husk. Fruit may be consumed in a fresh or processed form.

**Assorted fruits - inedible peel:**
- avocados
- bananas
- guavas
- kiwi fruit

Whole commodity unless qualified.
- Pineapples: after removal of crown.
- Avocado and mangoes: whole commodity after removal of stone but calculated on whole fruit.
- Bananas: after removal of crown tissues and stalks.

**GROUP 15 - CEREAL GRAINS**

Cereal grains are derived from the clusters of starchy seeds produced by a variety of plants primarily of the grass family (*Gramineae*). Husks are removed before consumption.

**Cereal grains:**
- barley
- maize
- oats
- rice
- rye
- sorghum
- sweet corn
- wheat

Whole commodity.
- Fresh corn and sweet corn: kernels plus cob without husk.

**GROUP 16 - STALK AND STEM CROPS**

Stalk and stem crops are various kinds of plants, mostly of the grass family (*Gramineae*) cultivated extensively as animal feed and for the production of sugar. Stems and stalks used for animal feeds are consumed as succulent forage, silage, or as dried fodder or hay. Sugar crops are processed.

**Stalk and stem crops:**
- barley fodder and straw
- maize fodder
- grass fodders
- sorghum fodder

Whole commodity.

**GROUP 17 - LEGUME OILSEEDS**

Legume oilseeds are mature seeds from legumes cultivated for processing into edible vegetable oil or for direct use as human food.

**Legume oilseeds:**
- peanuts

Whole kernel after removal of shell.
CLASSIFICATION OF COMMODITIES

GROUP 18 - LEGUME ANIMAL FEEDS

Legume animal feeds are various species of legumes used for animal forage, grazing, fodder, hay or silage with or without seed. Legume animal feeds are consumed as succulent forage or as dried fodder or hay.

Legume and animal feeds: peanut fodder
alfalfa fodder pea fodder
bean fodder soybean fodder
clover fodder

GROUP 19 - TREE NUTS

Tree nuts are the seed of a variety of trees and shrubs which are characterized by a hard inedible shell enclosing an oil seed. The edible portion of the nut is consumed in succulent, dried or processed forms.

Tree nuts: macadamia nuts
almonds pecans
chestnuts walnuts
filberts

GROUP 20 - OILSEED

Oilseed consists of the seed from a variety of plants used in the production of edible vegetable oils. Some important vegetable oilseeds are byproducts of fibre or fruit crops.

Oilseed: safflowerseed
 cottonseed
 linseed
 sunflowerseed
 rapeseed

GROUP 21 - TROPICAL SEEDS

Tropical seeds consist of the seed from several tropical and semitropical trees and shrubs mostly used in the production of beverages and confections. Tropical seeds are consumed after processing.

Tropical seeds: coffee beans
 cacao beans

GROUP 22 – HERBS

Herbs consist of leaves, stems and roots from a variety of herbaceous plants used in relatively small amounts to flavour other foods. They are consumed in succulent or dried forms as components of other foods.

Herbs: Whole commodity.
CLASSIFICATION OF COMMODITIES

PORTION OF COMMODITY TO WHICH THE CODEX MRL APPLIES (AND WHICH IS ANALYZED)

GROUP 23 – SPICES
Spices consist of aromatic seeds, roots, fruits and berries from a variety of plants used in relatively small amount to flavour other foods. They are consumed primarily in the dried form as components of other foods.

Spices:
Whole commodity.

GROUP 24 – TEAS
Teas are derived from the leaves of several plants, but principally *Camellia sinensis*. They are used in the preparation of infusions for consumption as stimulating beverages. They are consumed as extracts of the dried or processed product.

Teas:
Whole commodity.

GROUP 25 – MEATS
Meats are the muscular tissue, including adhering fatty tissue from animal carcasses prepared for wholesale distribution. The entire product may be consumed.

Meats:
Whole commodity. (For fat soluble pesticides a portion of carcass fat is analyzed and MRLs apply to carcass fat)\(^1\)

carcass meat (and carcass fat)
carcass meat of cattle
carcass meat of goats
carcass meat of horses
carcass meat of pigs
carcass meat of sheep

GROUP 26 - ANIMAL FATS
Animal fats are the rendered or extracted fat from the fatty tissue of animals. The entire product may be consumed.

Animal fats:
Whole commodity.
cattle fat sheep fat pig fat

---

---

GROUP 32 - POULTRY BYPRODUCTS

Poultry byproducts are edible tissue and organs, other than poultry meat and poultry fat from slaughtered poultry.

Poultry byproducts: Whole commodity.

GROUP 33 - EGGS

Eggs are the fresh edible portion of the reproductive body of several avian species. The edible portion includes egg white and egg yolk after removal of the shell.

Eggs: Whole egg whites and yolks combined after removal of shells.
