 Revisiting IESTI

### HISTORY OF IESTI

- 1997 FAO/WHO Geneva Consultation 
- 1998 York International Conference on Pesticide Residues Variability and Acute Dietary Risk Assessment (PSD, UK) 
- *ad hoc* Expert Meeting held before the 1999 CCPR (Annex V in JMPR 1999 report) 
- JMPR meetings 1999, 2000, 2002, 2003, 2005, 2006
- changes consolidated at FAO/WHO 'Annapolis' workshop (WHO, 2008 = EHC 240)

Revisiting IESTI

## HOW IESTI EQUATIONS ARE USED

### In the process of MRL setting:

**IESTI =**  
**I**nternational  
**E**stimate of  
**S**hort-**T**erm  
 dietary **I**ntake

Short-term = 24 hours (for comparison with ARfD)

3

efsas European Food Safety Authority

Revisiting IESTI

## HOW IESTI EQUATIONS ARE USED; EU SPECIFIC

- In the pre-authorisation risk assessment
- In the EU annual reports on the monitoring programme for pesticide residues
- In the process of enforcement:
  - EU Rapid Alert System for Food and Feed (RASFF)
  - PSTI = Predicted short term intake from sampling result
  - Uses 'OR' = observed residue in equation instead of HR, but is essentially identical to IESTI. **OR refers to residue definition for monitoring!**

4

### Slide 3

Revisiting IESTI

## IESTI EQUATIONS

Select case 1, 2 a, 2b or 3:

- Case 1  
Unit weight ( $U_{RAC}$ ) < 25 g  
(e.g. green beans)
- Case 2a  
Unit weight ( $U_{RAC}$ )  $\geq$  25 g  
edible portion ( $U_e$ ) < large portion  
(e.g. potatoes)
- Case 2b  
Unit weight ( $U_{RAC}$ )  $\geq$  25 g  
edible portion ( $U_e$ )  $\geq$  large portion  
(e.g. red cabbage)
- Case 3  
bulked/blended commodity  
(e.g. tea)

5

efsa  
European Food Safety Authority

Revisiting IESTI

## CURRENT IESTI EQUATIONS

- Case 1  
Unit weight ( $U_{RAC}$ ) < 25 g  
(e.g. green beans with pods)  
$$IESTI = \frac{LP \times HR}{bw}$$
- Case 2a  
Unit weight ( $U_{RAC}$ )  $\geq$  25 g,  
 $v=3, 5, 7, 10$   
edible portion ( $U_e$ ) < large portion  
(e.g. potatoes)  
$$IESTI = \frac{\{U_e \times HR \times v\} + \{(LP - U_e) \times HR\}}{bw}$$
- Case 2b  
Unit weight ( $U_{RAC}$ )  $\geq$  25 g,  
 $v=3, 5, 7, 10$   
edible portion ( $U_e$ )  $\geq$  large portion  
(e.g. red cabbage)  
$$IESTI = \frac{LP \times HR \times v}{bw}$$
- Case 3  
bulked/blended commodity  
(e.g. tea, cereals)  
$$IESTI = \frac{LP \times STMR}{bw}$$

6

efsa  
European Food Safety Authority

Revisiting IESTI

## CURRENT IESTI EQUATIONS

### Effect of the unit weight

Spinach-total LP = 420.3 g/p/d, bw = 14.2 kg, South Africa (ZA) HR = 2.5 mg/kg, ARfD = 0.1 mg/kg		
Bunch of spinach	Spinach plant	Spinach leaf
$U_{RAC} = U_e = 300 \text{ g, JPN}$	$U_{RAC} = 45 \text{ g, } U_e = 33.3 \text{ g, AUS}$	$U_{RAC} = U_e = 1.5 \text{ g, NLD}$
Case 2a, v=3	Case 2a, v=3	Case 1, v=1
180% ARfD	90% ARfD	70% ARfD

7

European Food Safety Authority

Revisiting IESTI

## HISTORY OF MRL VERSUS HR (WHO/JMPR)

- Initially, MRL instead of HR in IESTI
- In 1999, MRL was replaced by HR, because:
  - the JMPR practice of recommending MRLs within 'MRL classes'. This may lead to the IESTI not being sufficiently discriminatory to be used as a screening technique.
  - wish to consider **total toxicologically relevant residue**; use of residue definition for risk assessment (HR) instead of residue definition for enforcement/monitoring (MRL)
  - **no rounding** in the middle of a calculation

8

efsa  
European Food Safety Authority

Revisiting IESTI

## HISTORY OF VARIABILITY FACTOR

- Definition for **variability factor (v)**: 97.5<sup>th</sup> percentile of the residues present in single crop units divided by the mean residue of the lot
- 2002 JMPR: default factors of 3,5,7,10  
2003 JMPR: **default factor 3**; 2005 JMPR confirmed this (new data)
- **Not accepted in EU**; EFSA PPR Panel opinion 2005. Variability factor is itself variable, 3 is the mean of the distribution. How conservative do risk managers want to be?
- 2007 EFSA PPR opinion; influence of changing v on Level of Protection

9

efsa  
European Food Safety Authority

Revisiting IESTI

## REASONS TO REVISIT IESTI - 1

- Check against **current science and practicalities** after 15 years of use
- Communicating that the legal standards (MRLs) are assessed may contribute to **building trust** among the general audience
- Harmonizing the IESTI methodology will increase the acceptability of Codex MRLs and as such contribute to a **level playing field** in international trade.

10

efsa  
European Food Safety Authority

Revisiting IESTI

## REASONS TO REVISIT IESTI - 2

- Use of OECD MRL calculator and harmonised MRL classes:
  - MRLs are derived in the same way everywhere
  - using the MRL instead of the HR will no longer lead to different conclusions in different countries
- HR is based on a small dataset.
  - In reality, residue levels may vary outside the dataset. The 'OECD – MRL calculation unrounded' is a statistically more reliable estimate of the highest residue. The OECD – MRL calculation in many cases results in a level at approximately 2x the HR

11

efsa  
European Food Safety Authority

Revisiting IESTI

## 2006/2007 JMPR RECOMMENDATIONS

### for issues to address in a global workshop/consultation on IESTI

- Uncertainty and variability of the parameters
- Investigation of the practicalities of using the MRL
- Ways to improve the consumption, unit weight and bodyweight data
- Identification of additional subgroups of the population for which the assessment should be conducted, e.g. toddlers
- The adequacy of the IESTI/NESTI equations when residues from monitoring/enforcement are used
- How to improve the communication between risk assessors and risk managers and the public on the output of the risk assessment

12

efsa  
European Food Safety Authority

Revisiting IESTI

**IESTI EVENT GENEVA SEPT 2015**

## Stakeholder meeting 7 sept

- AIM: to collect views and contributions of stakeholders in order to use this input in the EFSA/FAO/WHO scientific workshop on 8 + 9 sept
- Attended by representatives of risk management bodies, of producing and exporting countries, of NGOs, of Industry
- Expectations of participants for workshop:
  - Global harmonisation of the equations;
  - Development of a roadmap describing the activities needed to reach that goal.

13

efsa  
European Food Safety Authority

Revisiting IESTI

**IESTI EVENT GENEVA SEPT 2015**

## Stakeholder meeting 7 sept

Discussion on purpose of IESTI calculations:

1. evaluation of the dietary risk related to a specific use or
2. evaluation of the dietary risk related to a specific MRL

14

efsa  
European Food Safety Authority

Revisiting IESTI

## FURTHER MESSAGES FROM STAKEHOLDER MEETING

- PAN- Europe (NGO):

*'Priority in the EU is to protect human and environmental health'*

*'IESTI being over conservative is a myth'*

*'IESTI must be modified according to cumulative risk assessment'*

- ECPA:

*'Keep current IESTI equation (as applied by JMPR) until full impact is known and further work is completed'*

*'Promote international harmonization between JMPR, Japan, Europe and USA / Canada'*

15

efsa  
European Food Safety Authority

Revisiting IESTI

## FURTHER MESSAGES FROM STAKEHOLDER MEETING

- European Commission:

  - *'All residue levels entered up to and including the MRL should not result in ARfD exceedance'*
  - *'Revised IESTI equation should be acceptable at international level, notably Codex/JMPR'*
  - *'Overall LoP should not be lowered'*
- Exporting country (Thailand):

  - *Use MRL in IESTI as tier 1 in tiered approach*
  - *Develop guidelines on establishing unit weights*
  - *Consider processing / cooking factors*
  - *Establish a guideline for inspection on pesticide residues based on risk*

**IESTI EVENT GENEVA SEPT 2015**

**Conclusions workshop 8 + 9 sept.**

17

efsa  
European Food Safety Authority

Revisiting IESTI

**IESTI EVENT GENEVA SEPT 2015: WORKSHOP**

**Proposal for new IESTI equations**

- New IESTI equation replacing case 1 and case 3 of the current IESTI equation:
 
$$IESTI = LP_{bw} \times MRL \times CF \times PF$$
- New IESTI equation replacing case 2a and case 2b of the current IESTI equation:
 
$$IESTI = LP_{bw} \times MRL \times v \times CF \times PF$$

18

efsa  
European Food Safety Authority

Revisiting IESTI

**IESTI EVENT GENEVA SEPT 2015: WORKSHOP**

## Main recommendations

- Replace the HR and STMR by the MRL in all cases of the IESTI equation
- Use a default variability factor of 3
- Derive the P97.5 large portion from the distribution of consumption values expressed as g/kg body weight
- Proposal to remove the unit weight from the IESTI equations
- applicable to both MRL setting for individual commodities and enforcement purposes

19

efsa  
European Food Safety Authority

Revisiting IESTI

**IESTI EVENT GENEVA SEPT 2015: WORKSHOP**

## Future work - 1

- Develop a list of commodities for which the variability factor is not applicable
- Information on bulking and blending practices needs to be gathered.
- Further guidance on the derivation of conversion factors is needed (OECD?)
- Conversion factors and processing factors should be made publicly available by the risk assessors in a database.

20

efsa  
European Food Safety Authority

Revisiting IESTI

## IESTI EVENT GENEVA SEPT 2015: WORKSHOP

### Future work - 2

- Develop a harmonized and comprehensive list of commodities and certain pre-defined processed commodities for which large portion data need to be derived
- Develop a harmonized list or database compiling the large portions for the different diets at global level. Data should comply with agreed quality criteria.
- Further guidance on how to derive a large portion is required.

## PRELIMINARY IMPACT ANALYSES

- An *ad hoc* working group with members from ANSES (FR), APVMA (AUS), BfR (DE), CRD (UK), EFSA, RIVM (NL) has prepared a preliminary impact assessment on the proposed changes. The assessment includes:
  - impact on number of MRLs
  - ratio of current versus proposed exposure estimates (case 1, 2a, 2b, 3)
  - commodities affected
  - influence of the number of trials in the derivation of the MRL

23

## IESTI ratio proposed over current per case

27

Impact of changes in IESTI calculations : use of the residue data from EU Art 12 review

## Conclusion for all diets (cumulated)

	Acute risk not identified anymore	MRL lost	Unchanged conclusion	No comparison possible	TOTAL
New IESTI / IESTI_pers_EU	29	178	16664	23559	40430
New IESTI / IESTI_pers_JMPR	1	268	16602	23559	40430
New IESTI / IESTI_calc_EU	47	203	21072	19108	40430
New IESTI / IESTI_calc_JMPR	0	320	21002	19108	40430

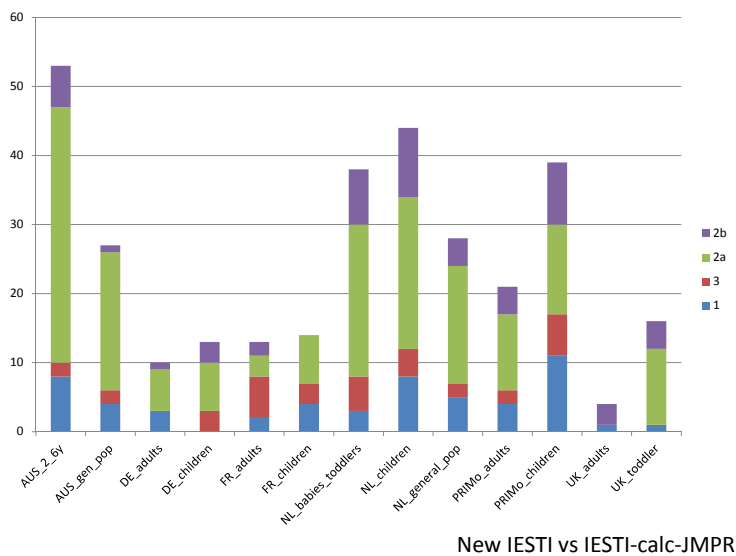

## MRL by case for each diet

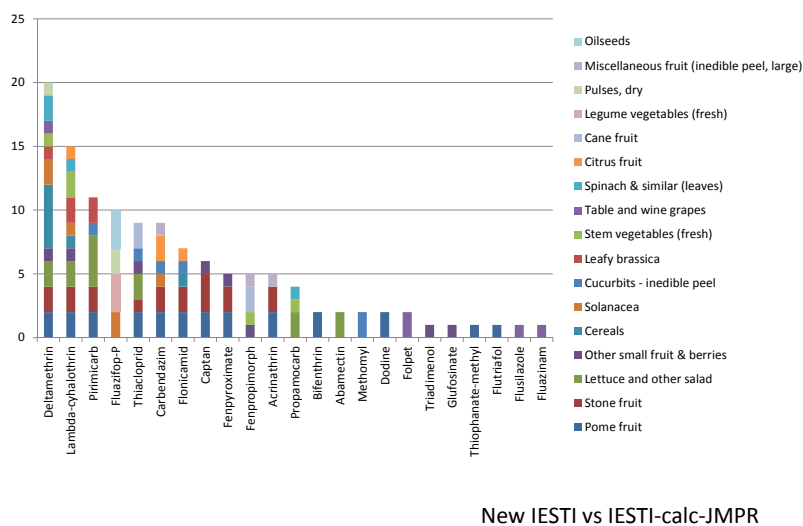

## MRL lost by diet and by case

## MRL lost by AS and commodity group

# MRL lost by commodity

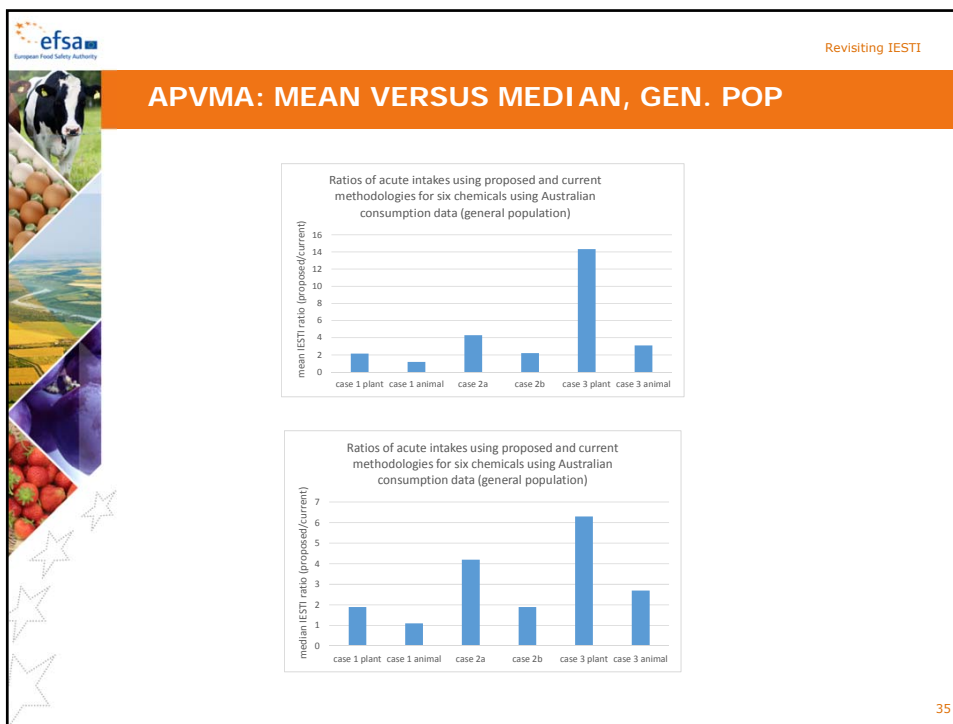

New IESTI vs IESTI-calc-JMPR

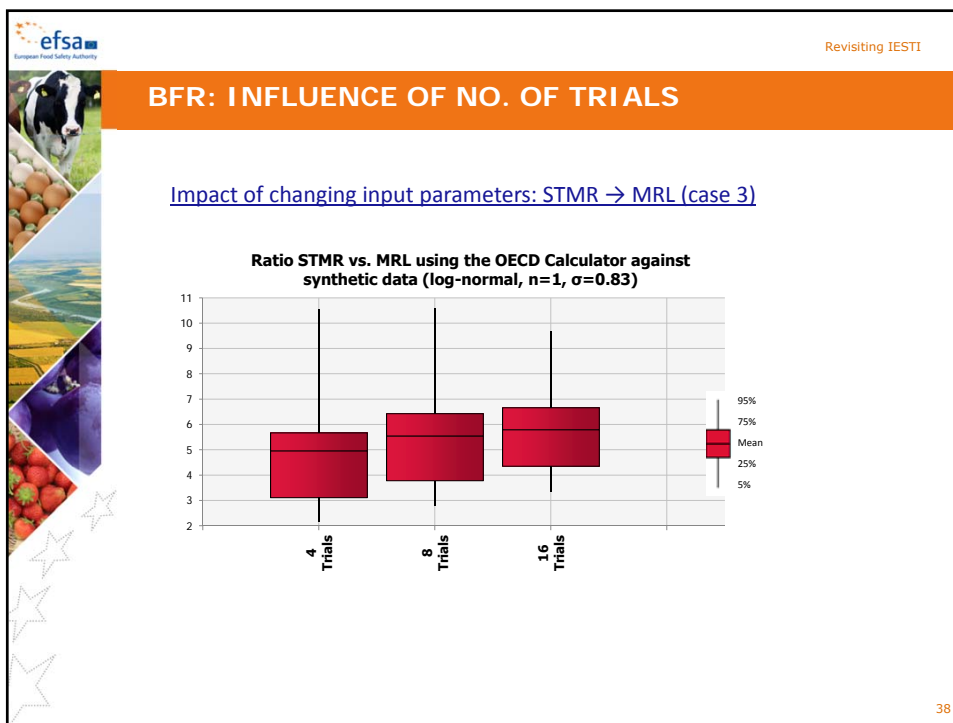

# % of MRL lost by commodity group

New IESTI vs IESTI-calc-JMPR

Total number of MRL for each commodity is indicated above each bar

## ROADMAP

- 

EFSA event report by end 2015 ✓
- 

Draft report considered by JMPR 2015 ✓
- 

Side-event at CCPR 2016 (25-30 April) ✓
- 

Need for further international discussions  
with JMPR and stakeholders and  
dissemination of information ✓
- 

Please refer to CRD3 for background  
information and proposal for future work ✓

# THANK YOU FOR YOUR ATTENTION!

謝謝

41

The slide features a vertical collage on the left side with images of a cow, eggs, a landscape, and vegetables. The main content is centered, with a large orange bar at the top. Below the title, a corkboard displays sticky notes with 'Thank you' in multiple languages: obrigado, Dank U, Merci, mahalo, Kösz, chacubo, Grazie, Thank you, maururu, Takk, Gracias, Dziękuję, Děkuju, danke, and Kiitos. The Chinese characters '謝謝' are written in a stylized font to the right of the corkboard.
