

## **METHAMIDOPHOS (100)**

The 2003 JMPR evaluated supporting information on cucumbers and concluded that the residue data were insufficient to estimate maximum residue limits for acephate or for methamidophos arising from use of acephate. The present Meeting noted that the report of the 2003 JMPR, while stating that the number of trials was inadequate for the purposes of estimating a maximum residue level for acephate on cucumber, made no recommendation with respect to the existing recommended MRL for methamidophos arising from the use of acephate.

### **RECOMMENDATION**

The Meeting recommended that the draft MRL of 1 mg/kg for cucumber (CCN: VC0424) be withdrawn.
