

## **Inputs for the follow up discussion on Sustainable Forestry for FSN**

### **SWITZERLAND**

As mentioned during the last Bureau meeting, Switzerland supports the idea of organizing a CFS intersessional event on the topic: “Relation between tree plantations and food security and nutrition.” Our understanding is that a written outcome of the meeting will be produced to be reported to the CFS 46 plenary, but no further follow-up work within the CFS agenda should be foreseen.

We expect to hold an all-inclusive meeting with speakers from civil society and private sector as well as specialists from research institutions capable to highlight all aspects linked to the generation of benefits generated by these plantations and the short and longer term impact for the local populations, including those working in these plantations.
