

UNITED KINGDOM

The UK welcomes this preliminary version of the zero draft and it is generally satisfied with the overall structure of the document.

We would like to make two specific comments;

- In the section about production systems (p.9/10), there are two key areas that still need to be included, biofortification and the access to better quality inputs - perhaps these could be included as part of section f. Moreover, on page 15 fortification is mentioned as a means to improve nutritional and health outcomes. We believe in this context biofortification should be included as well.
- We would like to see greater emphasis on the role that technology and innovation play in food systems not only to increase productivity and efficiency, but also as a means to inform consumers on how to improve their diets, especially those in hard to reach areas.
