

## **Cabo Verde's Contributions**

As CFS secretariat may continue to receive inputs to improve the Voluntary Guidelines for Food Systems for Nutrition, without changing the core ideas already discussed and agreed upon, but allowing to capture the diversity of scenarios in which food systems exist, we propose the following:

- To capture the African reality it is important to reference the Youth and strengthen their role in Food Systems for Nutrition;
- To include a reference to promoting or reinforcing inspection actions in all establishments dealing with food confection, since in many cases the problems are not related to sanitary laws and regulations but with weakness in the inspection/supervision of those laws.
- To strengthen the sustainability in Food Systems for Nutrition w it is suggested that states should encourage the widespread use of renewable energy (solar, wind and waves) in all chains of production.
