

Mountains under pressure climate, hunger, migration

FAO HQ, Rome, Italy

14 - 15 December | Workshops

Training workshop on Mountain Green Cover Index | IRAQ ROOM (A235)

The training, organized by FAO, aims to illustrate the possible application of the Collect Earth system to results-based monitoring, where the outputs can be visually assessed through high and very high resolution satellite images and derive products such as vegetation trends. Case studies on the assessment of the Mountain Green Cover Index (Sustainable Development Goal indicator 15.4.2) in agriculture, forestry and land use from past applications will be described in order to provide greater detail and reference. The training will comprise a review of Collect Earth functionalities and context, hands-on assessment of case studies, data analysis and discussion, and possible applications for current or future projects.

14 December
9.00 -17.00

Training workshop
Collect Earth – part I

15 December
9.00 -17.00

Training workshop
Collect Earth – part II

Mainstreaming Ecosystem-based Adaptation into development planning | MALAYSIA ROOM (B227)

The two-day training session, developed by GIZ and offered in cooperation with The Mountain Institute and IUCN at the Mountain Partnership Global Meeting, allows participants to become familiar with the latest international political and conceptual discussions on Ecosystem-based Adaptation (EbA) mainstreaming issues and provides an overview of the basic steps of the EbA mainstreaming cycle. The training will focus specifically on mountain ecosystems.
