

# Irrigated Agriculture Adaptation

- No Regret:
  - Need to do it and will work with/without CC.
  - Irrigation agenda driven by water productivity and/or food security – CCA is add-on.
- CCA strategy: start at development agenda – check priorities and check CC.
- What scenarios to bring?
- Farmer – system – hydrol unit (basin) level
- Reducing risks: service provision modernization, insurance systems
- Institutions: support services (private/public) part of change management – a bottom up process
- Farm level: technology, agr practices → R&D, education
- Sound policy environment to enable adaptation.
