## ***Foot-and-mouth disease distribution by serotype and the seven virus pools, 2010-2012***

### ***HEADLINE NEWS***

#### **Pool 1:**

- serotype O outbreaks in pigs in China (Taiwan Province)<sup>1</sup>

#### **Pool 3:**

- serotype Asia 1 epidemic in West Eurasia, outbreaks in Turkey<sup>3</sup>
- serotype O and A outbreaks in cattle, sheep and goats in Libya<sup>1</sup>

#### **Pool 4:**

- serotype O and SAT2 outbreaks in cattle in Kenya<sup>6</sup>

#### **Pool 6:**

- serotype SAT 2 outbreaks in cattle in South Africa<sup>1</sup>

## Pool 1. CENTRAL / EAST ASIA

Country	Data WRL FMD <sup>4</sup> 2011	Data from field officers <sup>3</sup> 2011	Reported serotype/outbreaks in OIE 2012 (immediate notifications) <sup>1</sup>		Reported serotype/outbreaks in OIE 2011 (1 <sup>st</sup> 6 month report or/and immediate notifications) <sup>1</sup>		Reported serotype/outbreaks in OIE 2010 (annual report) <sup>1</sup>	
			Serotype	No of outbreaks	Serotype	No of outbreaks	Serotype	No of outbreaks
Cambodia	O				?	88	?, O	138
China (People's Rep. of)		Asia 1?			O	6	O, A	20
China (Hong Kong, SAR)	O				not reported		O	4
China (Taiwan Province)			O	2	O	9	O	4
Japan					not reported		O	292
Korea (DPR)	O				report missing		report missing	
Korea (Rep. of)	O				O	155	O, A	89
Laos, PDR	O				report missing		O	1
Malaysia	O				O, A	13	O, A	51
Mongolia					O	1	O	9
Myanmar					report missing		O, A, ?	10
Russia					O	1	O	2
Thailand					O, A	15	O, A	35
Viet Nam	O, A				?, O	472	O, A, ?	280

Note: Molecular evidence indicates Asia 1 circulates for long periods in Southeast Asia/China with gaps between reporting/isolation, with big epidemics seen less frequently than for O and A. Absence from reports does not equal evidence of absence.

*There are three topotypes (meaning very distantly related, at least 15% apart = separation of 10's of years) of serotype O circulating in Southeast Asia (SEA) and China (Pool 1): **Cathay**; **SEA**, **MYA-98**; and **ME-SA**, **Pan Asia**. The Cathay topotype seems to be unique to China (Hong Kong, SAR). The MYA-98 topotype was responsible for the FMD explosive outbreaks in the Republic of Korea and the Democratic People's Republic of Korea, as well as in Japan in 2010. The Pan Asia topotype is an overspill from South Asia occurring around the mid-1990s, the others are unique (hence the concept of a virus pool, where viruses evolve mostly independently of other regions). Each sequence report needs to be reviewed to follow these topotypes. The FMDV in China (Taiwan Province) has apparently*

### ***Comments for results available (WRL)<sup>4</sup> in 2011***

#### *Cambodia:*

Date received: 28/07/2011

No. of samples: 4; O: 2; Topotype: ME-SA, Pan Asia

*China:* FMDV serotype O outbreak reported to have occurred on 29/03/2011 in Jing Xiang Village, Tianzhu, Qian Dongnan, Guizhou. VP1 sequence data provided by the Lanzhou Veterinary Research Institute (and submitted to GenBank – accession number JF837375) showed the virus to belong to the ME-SA/Pan Asia lineage and to be closely related to recent viruses from Viet Nam.

Three further outbreaks of FMD type O have been reported: on 13/07/2011 at Longfeng Village, Pudi, Bijie, Guizhou in cattle/sheep/goats/pigs; on 31/08/2011 at Liebugou, Lengda Village, Jiacha, Shannan, Tibet in cattle; and on 30/09/2011 at Duixu Village, Zhongda Town, Lang, Linzhi, Tibet in cattle. No sequence data has been reported.

#### *Hong Kong SAR, P.R. China:*

Date received: 07/12/2011; No. of samples: 2; O: 2 Topotype: CATHAY, unnamed

Date received: 15/09/2011; No. of samples: 5; O: 5; Topotype: CATHAY, unnamed

#### *Laos:*

Date received: 28/07/2011; No. of samples: 4;

O: 1 Topotype: SEA, Mya-98

O: 3 Topotype: ME-SA, Pan Asia

#### *Malaysia*

Date received: 09/12/2011; No. of samples: 29

O: 1 Topotype: SEA, Mya-98

A: 6 Topotype: ASIA, Sea-97

#### *Thailand:*

Date received: 28/07/2011; No. of samples: 17

O: 1; Topotype: ME-SA, Pan Asia

O: 5; Topotype: SEA, Mya-98

A: 11; Topotype: ASIA, Sea-97

#### *Taiwan Province of China (POC):*

Three outbreaks were detected by serology on 06/05/2011 (Xinpu Township, Hsin-chu), 16/05/2011 (Yongjing Township, Chang-hua) and 23/05/2011 (Tianwei Township, Chang-hua), all in pigs. No viruses were isolated. Two new outbreaks of FMD type O were detected by serology on 11/07/2011 (Yingge District, T'ai-pei) and 26/07/2011 (Shigang District, T'ai-nan); both were in pigs. No viruses were detected.

#### *Vietnam:*

Date received: 28/07/2011; No. of samples: 7

O: 1; Topotype: SEA, Mya-98

O: 5; Topotype: ME-SA, Pan Asia

A: 1; Topotype: ASIA, Sea-97

## Pool 2. SOUTH ASIA

Country	Data WRL FMD <sup>4</sup> 2011	FAO-ICAR International conference 2012 <sup>7</sup>	Reported serotype/outbreaks in OIE 2012 (immediate notifications) <sup>1</sup>		Reported serotype/outbreaks in OIE 2011 (1 <sup>st</sup> 6 month report or/and immediate notifications) <sup>1</sup>		Reported serotype/outbreaks in OIE 2010 (annual report) <sup>1</sup>	
			Serotype	No of outbreaks	Serotype	No of outbreaks	Serotype	No of outbreaks
Bangladesh					?	?	not reported	
Bhutan					?	4	?	5
India		O, A, Asia 1,			?, O, Asia 1	439	O, A, Asia 1	422
Nepal					O, Asia 1	48	O	22
Sri Lanka	O				O	5	O	18

Commentary on the three endemic serotypes (O, A, and Asia-1) for 2010 is found in the annual FAO/OIE FMD surveillance report ([www.wrlfmd.org](http://www.wrlfmd.org))

The following comes from the FAO reference Centre for SAARC countries (PD-FMD, India) . [Note that is difficult to compare type A and Asia-1 nomenclature to those used in other regions as this Reference centre uses its own terminology.]

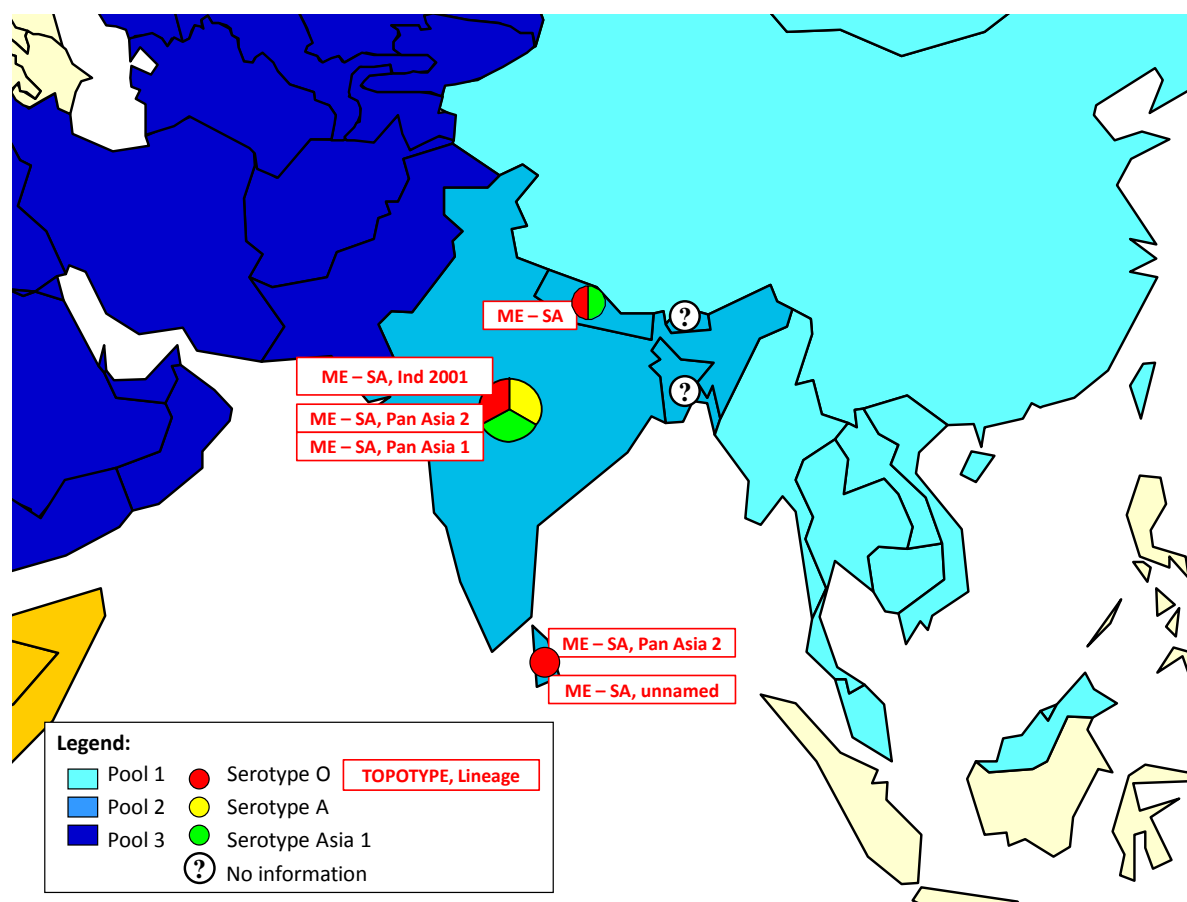

In India three serotypes have been recorded in 2010-2011. Serotype O is the most dominating one followed by serotypes Asia 1 and A. Emergence and re-emergence was observed in serotypes O and Asia 1 as part of their evolutionary process. Re-emergence was not observed in case of serotype A where it seems that, as the new sub-genotypes or genotypes appear the old ones disappear, a phenomenon that has been termed as "lineage turnover". In case of serotype O, different lineages co-circulate at the same period. During the last five years, epidemiological scenario in serotype O has been largely influenced by Pan Asia and Ind 2001 strains in India. In 2010-2011, lineage Ind 2001 dominated as outbreaks were recorded in 10 out of 12 states where disease due to serotype O occurred. Pan Asia II was responsible for the disease in West Bengal, Arunachal Pradesh and Maharashtra. Pan Asia I case in cattle occurred in Punjab. In Asia 1 exclusive dominance of particular lineage ("Lineage C") was observed. In serotype A, the phenomenon of co-circulation followed by genotype turnover was observed. Only "Genotype 18" type A viruses have been found in India since 2001, with cycles of FMDV belonging to one unique lineage (VP3<sup>59</sup>-deletion group) and non-deletion lineages. In 2010-11, the deletion lineages predominated in the epidemic spread. Emergence and re-emergence of lineages not always resulted in antigenic deviation to large extent in serotypes O and Asia 1 but resulted in significant antigenic divergence in serotype A necessitating change of the vaccine strain<sup>7</sup>.

### Pool 3. FMD distribution by serotypes 2010 - 2012

### Comments for results available (WRL)<sup>4</sup> in 2011

#### Afghanistan and Pakistan

The O/ME-SA/PanAsia-2ANT-10 and A-Iran-05AFG-07 lineages continue to dominate in these countries. A new, as yet unnamed, A-Iran-05 lineage was found in Afghanistan.

#### Bahrain

Date received: 03/11/2011; No. of samples: 4

O: 2 Topotype: ME-SA Lineage: PanAsia-2ANT-10

A: 1 Topotype: ASIA Lineage: Iran-05HER

#### Israel

Following 12 outbreaks of FMD type O in the Hazafon/Haifa and Hadarom areas between April and June 2011, six further outbreaks were reported in the Hazafon area at Shamir, Tsefat (24/06/2011),

---

Geographical boundaries or data in this report should not be considered to be official. The FAO/EuFMD disclaims all responsibility for the use made of this data. Always refer to the OIE for the official information provided by their member states [<http://oie.int/>]

Shirion Junction, Golan (30/06/2011), Orcha Junction, Golan (18/07/2011), Devora, Yizreel (10/07/2011), Dalton, Tsefat (10/07/2011) and Mi'elya, Acco (26/07/2011). All outbreaks involved only cattle. Viruses isolated at the WRLFMD all belonged to the ME-SA topotype, PanAsia-2ANT-10 lineage

#### *Kazakhstan*

An outbreak of FMD O occurred in cattle on the 11/08/2011 at Karashilik, Kurchumskiy, East Kazakhstan. A sample was submitted to the FGI-ARRIAH and the VP1 sequence provided to the WRLFMD. Phylogenetic analysis showed the sequence to belong to the ME-SA topotype, PanAsia lineage and was closely related to sequences obtained from viruses occurring in Vietnam and P.R. China (Guizhou province)

#### *Kuwait*

2 samples received on 18/07/2011. Phylogenetic analysis showed the sequence to belong to type O, ME-SA, Pan Asia-2ANT-10

#### *Libya*

Serotype O, Pan Asia-2ANT-10 lineage confirmed in of samples collected from cattle and sheep in Jan 2012

#### *South Ossetia / Tskhinvali Region Georgia (disputed)*

An outbreak of FMD type O occurred in cattle on 05/08/2011. Laboratory diagnosis took place at the FGI-ARRIAH and the VP1 sequence was provided to the WRLFMD. The virus belonged to the ME-SA topotype, PanAsia-2ANT-10 lineage.

#### *Turkey*

The WRLFMD reported on 17 October 2011, FMD results for 38 samples taken from cattle submitted from Turkey: serotype O (3); serotype A (17); both serotype O and A in one sample; serotype Asia 1 (3); and 14 samples with no virus detected.

Date received: 29/09/2011

No. of samples: 38

O: 3; Topotype: ME-SA; Lineage: PanAsia-2ANT-10

A: 17; Topotype: ASIA; Lineage: Iran-05HER-10

(Note: the viruses now designated as Iran-05HER-10 and Iran-05SIS-10 were previously classified as Iran-05AFG-07)

A+O: 1 (only the type O component could be amplified by RT-PCR)

Asia 1: 3

FMDV-GD: 14

*Note: FMDV serotype Asia 1 was detected in Pakistan (December 2010 in Bahawalpur, Punjab and December 2010/January 2011 in Karachi, Sindh). These viruses are closely related to previous viruses isolated from Sindh in 2008-2009. Subsequently, closely related Asia 1 viruses were detected in Bahrain (February 2011).*

*Asia 1 epidemics periodically spread from the Indian sub-continent across the Middle East entering Turkey, and on two occasions (1984 and 2000), even Greece. These epidemics have been recorded in 1973-1974, 1983-1984 and 1999-2000.*

*[WRLFMD, 2011, [http://www.wrlfmd.org/fmd\\_alerts/asia\\_1\\_2011.htm](http://www.wrlfmd.org/fmd_alerts/asia_1_2011.htm)]*

#### Pool 4: FMD distribution by serotypes 2010 – 2012

#### Comments for results available (WRL)<sup>4</sup> in 2011

##### Democratic Republic of the Congo (DRC)

The World Reference Laboratory for FMD (WRLFMD) received samples from the DRC on 29 September 2011 and completed the testing on 18 October 2011. FMD serotype O (**O Topotype: EA-2**) was found in epithelial tissues samples collected from cattle in October 2010 and FMD serotype A (**A Topotype: AFRICA**) was found in epithelial tissue samples collected from cattle in February 2011. The serotype O is close to the northern Zambian incursion outbreaks of last year, suggesting closer links that would link these events. The serotype A (may be the first time for DRC, that we know of) is related to East African pool (Kenya and Tanzania recent isolates, but sufficiently different to suggest local evolution).

##### Ethiopia

Date received: 02/11/2011; No. of samples: 12

#### **Comments for results available (WRL)<sup>4</sup> in 2011**

##### **Botswana**

Previously, in February 2011, an outbreak of FMD serotype SAT 2 was reported in cattle at Kaepo crush, Okavango, Ngamiland, Maun. A second focus of infection in cattle, also due to serotype SAT 2, was reported on 29/04/2011 at Butale Syndicate Crush, Francistown, North East, close to the border with Zimbabwe. The previous outbreak of FMD in this area was in 2003. Subsequently, two further outbreaks were reported in the region (on 22/05/2011 at Mabethe Crush, Francistown and on 27/05/2011 at Ramokgwebana, Selibe-phikwe, Central, Selibe Phikwe).

Collaboration between the Botswana Vaccine Institute (BVI) and the WRLFMD has shown that the viruses isolated from the two foci belong to two different serotype SAT 2 topotypes. The viruses from the Maun area belong to topotype III and are closely related to viruses present in that area during 2008 and 2009.

A new outbreak of FMD was reported in cattle at Itoto, Okavango, Ngamiland, Maun (17/09/2011); typing and genetic analysis by the regional reference laboratory is awaited.
