

***PCP Stage 3 focus: “Progressive reduction in outbreak incidence followed by elimination of FMDV circulation in domestic animals in at least one zone of the country”***

***Instructions for filling out the PCP checklist:***

1. Please complete and return to: [EuFMD@fao.org](mailto:EuFMD@fao.org) by 18 March 2013
2. Please complete the checklist corresponding to your country’s PCP Stage assignment at the most recent Roadmap meeting. If you believe that your country should be in a different PCP stage this year, then please fill in both checklists.
3. All questions, EXCEPT those **shaded yellow**, should be answered as either Yes or No, or Not applicable.
  - a. If the answer is Yes, please indicate with the number 1.
  - b. If the answer is NO, please indicate with a 0 (zero).
  - c. If the question is not relevant to the country situation (eg relates to swine production when there is none in the country), please mark NA.
4. Cells **shaded yellow** should be answered with a number ONLY
5. Activities are either Required or Recommended.
  - a. Required: These activities are indicated by the **grey shading**. Some activities or conditions are considered essential and fundamental to progression in the PCP, and so are required to complete the PCP Stage. A country can remain within the Stage without fulfilling all of these required activities...but they must be fulfilled in order to progress to the next stage.
  - b. Recommended: These are not required to complete the Stage, but are suggested, and if completed generally indicate high quality or thoroughness

6. Further explanation about each PCP Stage and Outcome is included in the *Checklist Explanation* document. Words in **red** are included in the *Glossary* at the end of the document.

***PCP Stage 3 focus: “Progressive reduction in outbreak incidence followed by elimination of FMDV circulation in domestic animals in at least one zone of the country”***

Outcome	Criteria		Questions	<b>COMPLETE THIS COLUMN</b> Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
<b>To enter Stage 3</b>				
Completion of PCP-Stage 2 AND results available from activities working towards key outcomes 1 & 2 below		0.1	Have you filled out the self-assessment questionnaire for Stage 2?	
OR		0.2	Has the country met all of the minimum requirements for Stage 2?	
Country was recognized in PCP-Stage 3 following the most recent Regional Roadmap Meeting AND results are available from activities working towards key outcomes 1 & 2 below.		0.3	Was your country recognized to be in PCP-Stage 3 following the most recent Regional Roadmap Meeting?	
<b>Outcome 1</b>				

Outcome	Criteria		Questions	COMPLETE THIS COLUMN Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
Ongoing monitoring of circulating strains and risk in different husbandry systems	Monitor <b>incidence</b>	1.1	Has the incidence of FMD been estimated for <u>one or more regions</u> (e.g. province, district) of the country, using robust epidemiological data collected within the last 12 months)?	
		1.2	Has the incidence of FMD been estimated for each and every region of the country, using <b>robust epidemiological data</b> collected in the last 12 months)	
		1.3	Has the incidence of FMD been estimated for each and every <b>husbandry system</b> , using robust epidemiological data collected in the last 12 months)	
		1.4	Has an <b>NSP serosurvey</b> , specifically designed to estimate FMD incidence been done in the last 12 months?	
	Monitor circulating strains	1.5	How many outbreaks have been clinically reported in the last 12 months	
		1.6	For how many outbreaks has the serotype been identified? (O, A, Asia-1)	
		1.7	For how many outbreaks has the virus been completely characterized in the last 12 months (FMD strain identified, sequenced, vaccine matching done)?	
	Quality assurance	1.8	Did these isolates originate from different regions of the country?	

Outcome	Criteria		Questions	COMPLETE THIS COLUMN Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
		1.9	Did these isolates originate from different husbandry systems?	
	Analysis of data	1.10	Are reports available that describe the dynamics of FMD occurrence over the past 3 years? (e.g. epidemic curves, sequential maps etc)	
Outcome 2				
The FMD control plan developed at the end of PCP Stage 2 is implemented, resulting in rapid detection of, and response to, all FMD outbreaks in at least one zone in the country.	Rapid detection	2.1	Are there any <b>incentives</b> to encourage reporting of suspect cases ?	
		2.2	Have suspected cases of FMD been reported to the veterinary authorities by public and private stakeholders in the past 12 months?	
		2.3	Have there been public awareness campaigns to encourage reporting of suspect FMD?	
		2.4	Is there a dedicated telephone number for people to use to reported suspected FMD cases?	
	Monitoring the implementation of control measures	2.5	Is there an established program to monitor the implementation of control measures, such as vaccination performance? (coverage, efficacy, matching to field strains)	

Outcome	Criteria		Questions	COMPLETE THIS COLUMN Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
	Response to all outbreaks	2.6	Were control measures to limit FMD spread implemented in response to <u>every</u> confirmed FMD outbreak (in the zone(s) where FMD eradication is targeted )?	
		2.7	Are <b>outbreak investigation</b> reports available for every suspected outbreak? These reports should identify the possible source of infection and premises to which spread might have occurred.	
Outcome 3				
		3.1	Is there objective evidence that the control measures are progressively decreasing FMD incidence in at least one zone of the country?	
Incidence of clinical FMD progressively eliminated from domestic animals, at least one zone		3.2	Have repeated serological surveys demonstrated a decrease in FMD incidence in zones targeted by control measures, compared to a similar period 12 or 24 months ago ?	
		3.3	Have reports of clinical FMD decreased in zones targeted by control measures, compared to a similar period 12 or 24 months ago?	
Outcome 4				
There is further development of an	FMD surveillance and <b>stakeholder</b> support	4.1	Do public and private stakeholders support the FMD control strategy?	

Outcome	Criteria		Questions	COMPLETE THIS COLUMN Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
enabling environment for control measures		4.2	Are livestock owners insured or compensated financially in the case that their animals are culled as part of FMD control?	
	Effective veterinary services	4.3	Has an OIE PVS or Gap analysis mission been done in the past 5 years?	
		4.4	Is there an organisational structure for <u>FMD control</u> with differentiation of roles and responsibilities for a) strategy development, b) implementation, c) decision making, d) monitoring and evaluation?	
	Supportive legal framework	4.5	Do the laws of the country allow for full implementation of the FMD eradication strategy ?	
		4.6	Do the laws of the country allow for restrictions on animal movement to prevent FMD spread?	
		4.7	Do the laws of the country allow for animals to be culled to prevent FMD spread?	
	Develop information system	4.8	Are all <b>epidemiology units</b> geo-referenced and are the data stored in a centralized information system?	

Outcome	Criteria		Questions	COMPLETE THIS COLUMN Yes=1 , No=0 Not applicable=NA, Yellow = enter a number
		4.9	Is there routine analysis and reporting of surveillance data (e.g. maps of outbreaks, epidemic curves, calculation of vaccination coverage etc)	
Outcome 5				
Body of evidence that FMD is not circulating endemically in domestic animals (in country or zone)		5.1	Are you confident that <b>surveillance</b> activities are detecting <i>all</i> cases of FMD?	
		5.2	Are <i>all</i> cases of FMD traced to a wildlife source or due to an incursion from another country?
