MULTI-COUNTRY PROGRAMMING FRAMEWORK
FOR THE PACIFIC ISLANDS
Cook Islands, Federated States of Micronesia, Fiji, Kiribati, Marshall Islands, Nauru, Niue, Palau, Samoa, Solomon Islands, Tokelau, Tonga, Tuvalu and Vanuatu

2018 - 2022

October 2017
Multi-Country Programming Framework for the Pacific Islands
2018-2022

Introduction

1. The Pacific Multi-Country Programming Framework (CPF) sets out one common priority area to guide FAO partnership and support with the Governments of Cook Islands, Federated States of Micronesia, Fiji, Kiribati, Marshall Islands, Nauru, Niue, Palau, Samoa, Solomon Islands, Tokelau, Tonga, Tuvalu and Vanuatu - bringing together innovative international best practices and global standards with national and regional expertise during five years from 2018 to 2022. This is the third programming framework prepared for the Pacific sub-region and it builds on the experiences and lessons from the implementation of the CPF 2013-2017.

2. The areas of intervention to which FAO will focus assistance have been identified through multi-stakeholder consultations in each country or territory and analysis of the development context for each country, to ensure close alignment to national development priorities as articulated in national development plans and sector strategies. Ongoing and planned interventions of other key development partners have been taken into consideration to enhance harmonization and ensure that FAO assistance builds on and complements other partner support. A series of national consultation meetings were conducted with all countries to help build ownership and to validate the priority areas selected for FAO support. The in-country consultations included government representatives from relevant sectors, private sector associations and individuals, and non-governmental and civil society institutions, particularly those representing women’s groups, key regional organizations, (United Nations) UN agencies and other development partners. The focus areas chosen reflect FAO’s comparative advantages and corporate strategic objectives in agriculture (crops, livestock, forestry and fisheries), food security, natural resource management and rural development sectors while ensuring synergy with the Framework for Pacific Regionalism and the United Nations Pacific Strategy (UNPS) 2018-2022.

I. Pacific Island Countries’ context and priorities

3. Two over-arching documents serve to frame the context of the work of FAO in the Pacific: the SIDS Accelerated Modalities of Action (SAMOA) Pathway which was adopted at the Third International Conference on Small Island Developing States (SIDS) in Samoa in September 2014; and the Framework for Pacific Regionalism which establishes processes and principles to guide a deeper regionalism to help create “a region of peace, harmony, security, social inclusion, and prosperity, so that all Pacific people can lead free, healthy, and productive lives”.

4. Paragraph 61 of the SAMOA Pathway invites FAO to develop an action programme to address food and nutrition challenges facing SIDS. This Global Action Programme on food security

---

1 Consultations with Tokelau were held in Samoa as part of the United Nations Pacific Strategy consultations
2 PIFS (2014) Framework for Pacific Regionalism, p.3
and nutrition in SIDS (GAP) guides the technical substance of the CPF as this programme is intended to support countries achieve the 2030 Agenda for Sustainable Development and the Sustainable Development Goals (SDGs). The Global Action Programme focuses on three broad objectives: (i) enabling environments for food security and nutrition; (ii) sustainable, resilient and nutrition-sensitive food systems; and (iii) empowered people and communities for improved food security and nutrition. The Framework for Pacific Regionalism, coupled with guidance provided by FAO Members through the FAO Regional Conference for Asia and the Pacific (APRC), provides the modalities of working for FAO and its technical and funding partners in the Pacific.

5. The CPF intends to support the implementation of key national policy frameworks and has also been guided by relevant regional framework documents which include: (i) the Framework for Action on Food Security in the Pacific: Towards a Food Secure Pacific, in particular Theme 3 (Enhanced and sustainable production, processing, marketing, trading and use of safe and nutritious food); (ii) the 2015 Regional Roadmap for Sustainable Pacific Fisheries; and (iii) the Framework for Resilient Development in the Pacific: An Integrated Approach to Address Climate Change and Disaster Risk Management (FRDP) 2017-2030. In line with the Pacific Leaders Gender Equality Declaration adopted by Pacific Island Forum Leaders in 2012 and reaffirmed in 2015, gender is mainstreamed throughout the CPF.

6. The national development strategies and plans of the Pacific Island Countries (PICs) included in this CPF recognize the vital importance of sustainable development of natural resources and the role of agriculture, forestry and fisheries for food security and nutrition, livelihoods and economic development. In many countries, agriculture, fisheries, food security and nutrition sector policies and plans specifically target reducing the dependency on imported food and increasing the availability, access and consumption of local nutritious food, often citing the critical importance of an enabling policy and legislative environment with improved data and information for planning, implementation and monitoring. Strategic priorities for adapting to climate change and preparing for and responding to disasters are now included at different levels in all countries’ policy frameworks with many countries already (or in the process of) having prepared integrated joint national plans for climate change and disaster preparedness.

7. Pacific Islands Forum Leaders have explicitly recognized the link between Non Communicable Diseases (NCDs) and development, declaring that the “Pacific is in a NCD crisis” as part of the 42nd Pacific Islands Communiqué for the Pacific. In 2014, a special Joint Forum Economic and Pacific Health Ministers Meeting agreed to a range of measures highlighted in the NCD Roadmap Report on preventing and controlling NCDs in the Pacific. At the national level, many countries in the region have prepared NCD action plans which recognize the need for a multi-sector approach which, inter alia, includes ministries of agriculture, education, health and trade, and specifically target reducing diet-related NCD risk factors through increased consumption of healthy foods such as fruits and vegetables. The CPF preparation has also taken account of FAO Member Countries’ recommendations from the 33rd ARPC which reiterated the importance of FAO working closely with other regional and sub-regional partners in providing support to member countries on priority areas of work, including climate smart agriculture, developing and implementing norms and standards related to food and agriculture, nutrition and food safety, and improving domestic market linkages.

---

3 Pacific Leaders Gender Equality Declaration, 30 August 2012, Rarotonga, Cook Islands (Annex 1 the Forum Communiqué, Forty-Third Pacific Islands Forum)
and agricultural sector competitiveness. The CPF is aligned with these Asia-Pacific regional priorities and with the Interregional Initiative on SIDS as FAO’s main delivery mechanism for the implementation of the Global Action Programme on Food Security and Nutrition in SIDS.

8. FAO support through the CPF will also continue assisting countries implement global standards and regulatory agreements including the Codex Alimentarius, International Plant Protection Convention, FAO Agreement on Port State Measures to Prevent, Deter and Eliminate Illegal, Unreported and Unregulated Fishing, and International Treaty on Plant Genetic Resources for Food and Agriculture; and respond to the five priority areas identified in the FAO Regional Priority Framework for Asia and the Pacific 2010-2019: strengthening food security and nutrition; fostering agricultural production and rural development; enhancing equitable, productive and sustainable natural resource management and utilization; improving capacity to respond to food and agricultural threats and emergencies; and coping with the impacts of climate change on food and agriculture.

9. The CPF responds to the 2030 Agenda for Sustainable Development, in particular to SDG 1 (End poverty in all its forms everywhere), SDG 2 (End hunger, achieve food security and improved nutrition and promote sustainable agriculture), SDG 3 (Ensure healthy lives and promote well-being for all at all ages), SDG 13 (Take urgent action to combat climate change and its impacts), SDG 14 (Conserve and sustainably use oceans, seas and marine resources for sustainable development), and SDG 15 (Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss).

II. FAO’s contribution and expected results

10. In response to the PICs national and regional priorities to build social and ecological resilience to the impacts of climate change, strengthen food security and nutrition and address the NCD crisis, FAO aims to play a catalytic role in linking agriculture and health, strengthening inter-agency linkages and developing partnerships to foster a sustainable increase in production, trade and marketing of domestic agriculture products, and healthy consumption of diverse, safe and nutritious food. To achieve this overall priority area or outcome across the PICs represented in this document, FAO assistance will be focused on three common areas of interventions to deliver the following outputs:

(i) evidence-based recommendations developed and promoted to incentivize the production and consumption of safe and healthy food;

(ii) sustainable and climate-smart practices promoted to help build resilient agriculture, fisheries and forestry production systems; and

---

4 Details on national contexts are provided in the individual background country chapters prepared to inform the development of the CPF.

Regional priorities include: non-communicable diseases (Forum Leaders Statement on NCDs, 2011); fisheries; climate change and disaster risk management (Forty-seventh Pacific Islands Forum, 2016); nutrition and food safety; inclusive value chain development; food waste and loss; transboundary animal and plant pests and diseases, sustainable production and resilience in the context of climate change; data and analysis for decision making, monitoring and evaluation (Thirty-third Session of the FAO Regional Conference for Asia and the Pacific, 2016)
(iii) food control and business practices identified and promoted to facilitate efficient agri-food value chains that provide safe, nutritious and affordable food.

11. In line with the regionalism approach promoted by PICs, the overall outcome and common outputs were drawn from commonalities arising from country consultations and will be delivered, where possible, through multi-country interventions included in the Pacific Islands matrix presented in Annex 1. Specific country outcomes, indicator targets and interventions taking into consideration each country’s context and technical gaps are presented in the individual country matrices that follow. In addition, FAO’s interventions will be informed by a planned multi-country gender assessment that will contribute to strengthen gender integrated planning at activity level.

Safe and healthy food production and consumption

12. Gaps have been identified in the availability and analysis of up to date and accurate agriculture, forestry, fisheries and nutrition information to better food and nutrition policy formation, implementation and monitoring. Recognizing that data is essential for sound decision making, planning and monitoring, FAO technical assistance will focus on cost effective and manageable measures, using innovative data collection and reporting tools as appropriate to the country context, for food security and nutrition data collection, analysis and dissemination. Support will also be provided to strengthen capacity to monitor relevant SDG indicator targets in areas where FAO has unique experience and is the leading UN specialized agency.

13. Based on a sound evidence-base, FAO technical assistance will be drawn upon to build capacity to strengthen food and nutrition policy frameworks to incentivize the domestic production and consumption of safe, healthy food from terrestrial and aquatic environments. Developing and implementing specific policies and programmes designed to increase intake levels of essential micronutrients and encourage healthy dietary choices that improve nutrition generally are a priority. In partnership with international organisations and research institutions, including the World Health Organization and the Pacific Research Center for the Prevention of Obesity and Non-Communicable Diseases (C-POND), and building on the results of recent studies and statistical modelling, technical assistance will be provided to explore a range of economic tools, including taxation of unhealthy foods, as an entry point for food system actions for a healthy diet. To guide the availability, access and consumption of healthy foods, technical support will also be provided for revising existing food-based dietary guidelines (FBDGs), adapting the revised Pacific FBDGs to national contexts, and developing implementation plans to ensure that the FBDGs guide food-related policies and programmes as well as nutrition education activities.

14. To foster healthy dietary behaviours, technical assistance will be provided to raise awareness and promote healthy eating habits through nutrition education and information, using multiple channels (ranging from mass media to the delivery of nutrition education in community settings and schools), accompanied by strategies to improve food environments. Capacity building in carrying out nutrition education will also be provided.

15. School food and nutrition interventions could play a critical role in improving diets and nutrition knowledge of school aged children and help them transition towards healthier foods and improved dietary practices. Depending on national context and specific identified needs, FAO
technical assistance will support the planning, targeting, feasibility assessment, design and monitoring for pilot school food and nutrition interventions.

**Resilient agriculture, fisheries and forestry production systems**

16. As changes in the availability and quality of natural resources, due to degradation, depletion and/or impact of climate change can significantly compromise food security in PICs, FAO technical assistance will focus on helping countries to build policy, legal, regulatory and institutional frameworks that provide the right incentives for environmentally sound and resilient development, and strengthening national capacities for the sustainable management and use of fisheries, forestry, land, water, and biodiversity resources to underpin ecosystem services, store carbon, improve climate resilience and ensure food security and sustainable livelihoods.

17. Recognizing that sound data on resources and production and linking this to policies and actions is critical to ensure resources are managed well, FAO technical assistance will focus on cost effective and manageable measures, using innovative data collection and reporting tools as appropriate to the country context, for primary sector data collection, analysis and dissemination. Training will also be provided to build capacity for results-based management, including strengthening monitoring frameworks in the agriculture, fisheries and forestry sector. The long-term aim is to build sustainable statistical systems that will produce accurate and timely statistics to integrate into the national statistical system and to inform evidence-based policy development, planning and monitoring. FAO support through the CPF will be aligned with the Pacific Strategic Plan for Agricultural and Fishery Statistics.

18. With the severity and frequency of extreme weather events projected to increase as a result of climate change, FAO support will foster integrated approaches to address climate change and disaster risks to help build sustainable and resilient rural livelihoods and food security. This will include building capacity in climate-smart agriculture, including land and water management, and exploring crop and livestock genetic resources and environment synergies to enhance farming system adaptation, through agroforestry practices, increased species diversity, and the introduction of climate-tolerant crops and varieties particularly locally-adapted and nutritious varieties. FAO will continue to support food security cluster coordination and preparedness, capacity building and policy development for disaster risk reduction in the agriculture sectors. Support will be directed to enhancing early warning systems and better forecasting – linked to a realistic set of adaptation options appropriately packaged for dissemination – to improve small scale fisheries and small holder farm planning and preparedness. Assistance will also be provided for building post-disaster rapid assessment capacity, including in the use of smart-phone based data collection tools to provide quick and efficient methods for data capture and sharing.

19. As a major source of animal protein across the region and a source of income for the small-scale sector, particularly women, coastal and inshore resources are particularly important; but traditional shallow water resource are under threat from over exploitation, habitat degradation as well as from the impacts of pollution, natural disasters and climate change. Migrating small scale effort into nearshore deep water for oceanic species can provide alternative livelihood opportunities for coastal communities and make available additional safe protein sources for the growing and urbanizing populations. In selected countries and working with other active partners, FAO support will focus on strengthening the enabling environment, reviewing and strengthening sustainable management practices and, where appropriate, exploring and piloting new models for the coastal
fishery resource management and development. To facilitate development of the small-scale fisheries sector, FAO technical assistance will be provided to support professionalization, pilot innovative, safe, fit for purpose Low Impact Fuel Efficient (LIFE) harvesting technologies, such as Fish Aggregating Devices, enhance uptake of quality fish handling and preservation techniques and improve business management skills of entrepreneurs.

20. In order to promote effective management, conservation and sustainability of oceanic fish stock and the marine environment FAO will continue to support PICs for their effective implementation of global, regional and sub-regional arrangements for conservation and management of tuna fisheries through partnering with regional and inter-regional organizations, including the Pacific Island Forum Fisheries Agency (FFA), the Pacific Community (SPC) and the Western and Central Pacific Fisheries Commission. FAO assistance will specifically address illegal, unreported and unregulated (IUU) fishing issues, including building capacity to implement the Port State Measures Agreement (PSMA) through the revision of legislation as may be necessary, institutional strengthening (including strategic action plans) and knowledge building and skills development for managers and inspectors.

*Efficient agri-food value chains that provide safe, nutritious and affordable food*

21. Ensuring that safe and nutritious food is available and accessible to consumers at competitive affordable prices is key to strengthening food security and nutrition in PICs. Facilitating improved production and marketing of local staples in order to reduce reliance on imported cereals will strengthen resilience against impacts of climate change and global market volatility and expand commercial and livelihood opportunities. In addition, confidence in the control of food safety risks in the food system, to ensure hygienically produced and safe food products is critical for accessing higher value markets, including tourist markets. FAO will adopt a nutrition-sensitive agriculture value chain approach that identifies and targets specific nutrition problems and vulnerabilities and prioritises specific foods or bundles of foods needed for a balanced diet to address these problems and to inform commodity and market selection. Technical assistance and capacity building support will be provided to organize and coordinate supply chains of local nutritious and safe food and upgrade and increase efficiencies in selected value chains areas, including: producing, processing and marketing horticultural and fisheries products; food quality, food safety and post-harvest practices to improve quality and reduce wastage; logistical systems for delivering and storing food; development and implementation of appropriate food standards; and improved coordination between actors in the value chain.

22. In accordance with specific country issues and identified priority needs, FAO support will be provided to strengthen legal and regulatory frameworks, using Codex Alimentarius standards as a benchmark, develop strategic action plans to strengthen food controls, enhance cross-ministerial coordination, strengthen participation in international standards improve capacity for risk analysis, and build capacity for good practices in primary production and downstream processing through the development of schemes and certification systems in line with international accreditation criteria.

23. To facilitate the entry of small-scale agriculture and aquaculture farms and processing operations into more commercial supply chains FAO will promote the application of sound business models and tools, enhanced business skills, and increased access to affordable finance for capital investment in new technology. FAO will work with relevant financial institutions, such as development banks, private sector associations, including Chambers of Commerce, and small
enterprise development centres to design appropriate agriculture finance and enterprise
development models and build capacity in their implementation. In accordance with specific country
needs, support will be provided to develop business skills, identify market opportunities, enhance
the technical and managerial capacities of actors involved in post-production activities, build
capacity in food processing and food processing technologies, supporting new food product
development, assess the viability of new food product lines and subsequently build capacity in
efficient production technologies, and contract farming models to improve aggregation of quality
supply and supply chain coordination. In relevant countries, FAO will continue to support the
Micronesian Association for Sustainable Aquaculture to enhance the sustainable development of
aquaculture.

24. Targeting women farmers and vendors to ensure they gain access to technologies and inputs
aimed at increasing the efficiency of local food systems has been identified to have positive benefits
for nutrition, given food production and marketing and food preparation responsibilities are
primarily managed by women. In selected countries a specific focus of interventions will be to
ensure small-scale (mainly women) food vendors are able to provide safe and nutritious food whilst
protecting and strengthening their enterprise opportunities. Additionally, support will be provided
to improve business skills, business plans and models, and opportunities for women in aquaculture
enterprises.

25. In several of the smaller island countries, urban populations are concentrated on island
centres where food demand is high, but new agricultural production opportunities near urban
centres are limited and shallow water coastal fisheries resources are depleted. In these situations
building capacity for sustainable inter-island food trade (including fish) will be targeted for support.

III. Implementation, monitoring and reporting arrangements

26. The scope of the CPF engagement will require support from the core budget of FAO and
Trust Fund projects from external donors. The approximate total of estimated resources required to
implement the CPF is USD 56.2 million, with USD 28.5 million (50.8 percent) already available from
FAO and partners. FAO’s Technical Cooperation Programme (TCP) and other core budget resources
are anticipated to provide around USD 13.2 million (23.5 percent), to be utilized for implementation
of small and medium sized national and multi-country projects. A resource mobilisation target of
USD 14.5 million (25.7 percent) has been identified for extra-budgetary resources (excluding three
potential GCF projects of USD 10 to 50 million), with a further USD 7.5 to 10 million resource
mobilization target for emergency preparedness and response.

27. Key resource partners to implement the CPF include the Global Environment Facility (GEF)
through projects in Fiji, Kiribati, Solomon Islands, Tonga and Vanuatu, the European Union (EU)
through the Food and Nutrition Security Impact, Resilience, Sustainability, and Transformation
(FIRST) projects implemented in partnership with the Governments of Fiji, Solomon Islands and
Vanuatu and the World Trade Organization through the Standards and Trade Development Facility
(STDF) project implemented in partnership with the Government of Solomon Islands. FAO will
ensure synergy between FAO funded technical assistance and GEF and STDF funded projects, with
TCP and other technical assistance supporting the achievement of these projects. Other potential
resource partners identified include the Green Climate Fund (GCF), for which FAO is as an accredited
entity for medium-sized projects. Under the GCF Readiness and Preparatory Support Programme, FAO can offer technical expertise to support Member States’ adaptation planning processes.

28. The CPF will be pursued in partnerships as broad as possible and in alignment with the joint efforts of the Governments of the PICs included in this framework and their development partners – including relevant private sector bodies, non-government organizations (NGOs), regional organizations and international players active in the areas of coastal fisheries management, disaster management, climate change and resilience building – for enhanced coordination and aid effectiveness. In particular, the Regional Framework for Accelerating Action on Food Security and Nutrition in Pacific SIDS (the Pacific Framework) will provide a mechanism to strengthen the coherence and coordination of development partner support for food security and nutrition. The Pacific Framework intends to directly contribute to the implementation of the GAP in the Pacific and involves the International Fund for Agricultural Development (IFAD), FAO, the United Nations Children’s Fund (UNICEF), the World Bank Group, the World Health Organization (WHO), SPC, the Government of Australia (Department of Foreign Affairs and Trade), and the Government of New Zealand (Ministry of Foreign Affairs and Trade). The PICs Governments and FAO look forward to seeking collaboration and support from all concerned partners for the successful implementation of the CPF.

29. An implementation and monitoring plan will be drafted as a supplement to the CPF, outlining country activities, timeframe and key performance indicators, including relevant gender qualifiers. This will be used to record progress towards the implementation of agreed activities, based on information provided by national governments and mission reports from FAO technical officers and consultants. Progress will be discussed with relevant government representatives during bi-annual reviews (mid-year teleconferences and end-of-year meetings) and progress reports will feed into the UNPS annual reporting. Following annual reviews, the CPF document may be adjusted as necessary to keep it focused and relevant to country needs. A Multi-Country Programme Evaluation will be undertaken by FAO’s Office of Evaluation in the penultimate year of the CPF.

30. Major changes in country circumstances can be addressed by a CPF revision as and when needed.
Honourable Kiriau Turepu  
Minister for Agriculture  
Cook Islands

Honourable Marion Henry  
Secretary, Department of Resources and Development  
Federated States of Micronesia

Honourable Ina Seruiratu  
Minister for Agriculture  
Fiji

Honourable Alexander Teabo  
Minister for Environment, Lands and Agricultural Development  
Kiribati

Honourable Hilda C. Heine

Honourable Kelihiano Kalolo  
Minister for Economic Development, Natural Resources & Environment  
Tokelau

Honourable Semisi Tualangi Fakahau  
Minister for Agriculture & Food, Forests and Fisheries  
Tonga

Honourable Dr Puakena Boreham  
Minister for Natural Resources  
Tuvalu

Honourable Matai Seremaiah  
Minister for Agriculture, Livestock, Fisheries, Forestry and Biosecurity  
Vanuatu

Ms Eriko Hibi  
Subregional Coordinator for the Pacific Islands  
Food and Agriculture Organization of the United Nations
Annex 1: CPF Results and Resource Requirements for 2018 to 2022

This annex includes 15 matrices: one multi-country matrix (below) focusing on results and resources relevant to several or all Pacific Island Countries and 14 country specific matrices.

PACIFIC ISLANDS

Outcome:
Sustainable increase in production, trade and marketing of domestic agriculture products, and healthy consumption of diverse, safe and nutritious food

Related UN Pacific Strategy Outcomes and Indicators:
Outcome 1: Climate Change, Disaster Resilience and Environmental Protection, Indicators 1.3 (Number of PICTs that have established a national and at least one sectoral development plan incorporating climate change and disaster risk management, related to SDG 13.1.1) and 1.5 (Coverage of terrestrial, and marine areas that are protected, related to SDG 15.1.2 and 14.5.1)
Outcome 3: Sustainable and Inclusive Economic Empowerment, Indicators 3.1 (Number of PICTs in which the proportion of population living below the national poverty line has decreased, SDG 1.2.1) and 3.2 (Number of PICTs in which the proportion of men, women, youth and children of all ages living in poverty in all its dimensions according to national definitions has decreased, SDG 1.2.2)

Regional Priorities:
Non-Communicable Diseases (Forum Leaders Statement on NCDs, 2011); Fisheries; Climate Change and Disaster Risk Management (Forty-seventh Pacific Islands Forum, 2016); Nutrition and food safety; Inclusive value chain development; Food waste and loss; Transboundary animal and plant pests and diseases, Sustainable production and resilience in the context of climate change; Data and analysis for decision making, monitoring and evaluation (Thirty-third Session of the FAO Regional Conference for Asia and the Pacific, 2016)

Output and indicator:
Output 1: Evidence-based recommendations developed and promoted to incentivize the production and consumption of safe and healthy food
Contributes to SDG Target 2.1

Annex 2: UN System Linkage

The Fiji and Samoa UN Country Teams (UNCT) covering the 14 Pacific Islands included in this CPF have adopted a regional model for the Pacific United Nations Development Assistance Framework (UNDAF). For the present cycle, a new outcome level UNDAF titled the *UN Pacific Strategy (UNPS) 2018-2022* has been developed, with six common strategic outcomes that provide the foundation for UN support at the national and regional levels: climate change, disaster resilience and environmental protection; gender equality; sustainable and inclusive economic empowerment; equitable basic services; governance and community engagement; and human rights. In 2016 and 2017, FAO has participated in joint country consultations and preparation of the UNPS 2018-2022 through the two UN Country Teams in Fiji (covering 10 countries) and Samoa (covering 4 countries).

FAO’s work articulated in the Pacific CPF will contribute to UNPS Outcomes 1 (Climate change, disaster resilience and environmental protection) and 3 (Sustainable and inclusive economic empowerment). Relevant indicators identified in the UNPS Results Framework include: 1.3 (Number of PICTs that have established a national and at least one sectoral development plan incorporating climate change and disaster risk management, related to SDG 13.1.1); 1.5 (Coverage of terrestrial, and marine areas that are protected, related to SDG 15.1.2 and 14.5.1); 3.1 (Number of PICTs in which the proportion of population living below the national poverty line has decreased, SDG 1.2.1) and 3.2 (Number of PICTs in which the proportion of men, women, youth and children of all ages living in poverty in all its dimensions according to national definitions has decreased, SDG 1.2.2).

FAO’s contribution to the UNPS is reflected in the Pacific UN Common Budgetary Framework (CBF). Drawing on the analysis of the CBF and the priorities of the UNPS, the Pacific UNCT will develop a joint resource mobilisation strategy that will allocate responsibilities across the UNCT and consolidate a common commitment to resource mobilisation. FAO will take part in the annual reviews of the resource mobilisation needs conducted by the UN Steering Committee, and will participate in the annual donor roundtables convened by the UNCT.

The outcome level, inter-agency and multi-country UNPS Monitoring and Evaluation (M&E) Plan is complemented by the monitoring and evaluation of individual agency programmes (including FAO’s CPF), the monitoring of joint programmes and M&E exercises conducted by theme groups, as well as the UN’s support to regional and national surveys. The UNPS M&E Plan will be implemented by the UNPS Coordination Group with the support of the Data Monitoring and Evaluation Group, which includes FAO. The UNPS M&E Plan includes, inter alia, the preparation of One UN Pacific Results Report in 2020 and 2022 incorporating the findings from annual monitoring and an end of cycle independent evaluation of the UNPS.

#### TCP General Provisions

1. The achievement of the objectives set by the project shall be the joint responsibility of the government and FAO.
2. As part of its contribution to the project, the government shall agree to make available the requisite number of qualified national personnel and the buildings, training facilities, equipment, transport and other local services necessary for the implementation of the project.
3. The government shall assign authority for the project within the country to a government agency, which shall constitute the focal point for cooperation with FAO in the execution of the project, and which shall exercise the government’s responsibility in this regard.

4. Project equipment, materials and supplies provided out of Technical Cooperation Programme funds shall normally become the property of the government immediately upon their arrival in the country, unless otherwise specified in the project agreement. The government shall ensure that such equipment, materials and supplies are at all times available for use of the project and that adequate provision is made for their safe custody, maintenance and insurance. Vehicles remain the property of FAO, unless otherwise specified in the project agreement.

5. Subject to any security provisions in force, the government shall furnish to FAO and to its personnel on the project, if any, such relevant reports, tapes, records and other data as may be required for the execution of the project.

6. The selection of FAO project personnel, of other persons performing services on behalf of FAO in connection with the project, and of trainees, shall be undertaken by FAO, after consultation with the government. In the interest of rapid project implementation, the government shall undertake to expedite to the maximum degree possible its procedures for the clearance of FAO personnel and other persons performing services on behalf of FAO and to dispense with, wherever possible, clearance for short-term FAO personnel.

7. The government shall apply to FAO, its property, funds and assets, and to its staff, the provisions of the Convention on the Privileges and Immunities of the Specialized Agencies. Except as otherwise agreed by the government and FAO in the Project Document, the government shall grant the same privileges and immunities contained in the Convention to all other persons performing services on behalf of FAO in connection with the execution of the project.

8. With a view to the rapid and efficient execution of the project, the government shall grant to FAO, its staff, and to all other persons performing services on behalf of FAO, the necessary facilities including:
   i) the prompt issuance, free of charge, of any visas or permits required;
   ii) any permits necessary for the importation and, where appropriate, the subsequent exportation, of equipment, materials and supplies required for use in connection with the project and exemption from the payment of all customs duties or other levies or charges relating to such importation or exportation;
   iii) exemption from the payment of any sales or other tax on local purchases of equipment, materials and supplies for use in connection with the project;
   iv) payment of transport costs within the country, including handling, storage, insurance and all other related costs, with respect to equipment, materials or supplies for use in connection with the project;
   v) the most favourable legal rate of exchange;
   vi) assistance to FAO staff, to the extent possible, in obtaining suitable accommodation;
   vii) any permits necessary for the importation of property belonging to and intended for the personal use of FAO staff or of other persons performing services on behalf of FAO, and for the subsequent exportation of such property;
   viii) prompt customs clearance of the equipment, materials, supplies and property referred to in subparagraphs (ii) and (vii) above.

9. The Government shall appoint a National Project Coordinator (NPC), as envisaged in the Project Document, to carry out the functions and activities specified in the project agreement. In some cases, it may be necessary for FAO to request, in writing, the NPC to incur specific commitments or obligations or to make specific payments on behalf of FAO. In such cases, the project may advance to the NPC project monies, up to the amounts allowed by and in accordance with current FAO rules and regulations. In this event the Government agrees to indemnify FAO and to make good to it, any losses that may arise from any irregularity in the maintenance of the advanced FAO’s monies on the part of the NPC.

10. The government shall deal with any claim which may be brought by third parties against FAO or its staff, or against any person performing services on behalf of FAO, and shall hold them harmless in respect of any claim or liability arising in connection with the project, unless the government and FAO should agree that the claim or liability arises from gross negligence or wilful misconduct on the part of the individuals mentioned above.

11. The persons performing services on behalf of FAO, referred to in paragraphs 6, 7, 8 and 10, shall include any organization, firm or other entity, which FAO may designate to take part in the execution of the project.
