Integrated land use

Support to afforestation and protection of the ecological environment of agricultural lands in the plain areas (TCP/DKR/3101)

Scope

To create and implement models and develop a strategic priority action plan to improve the ecological environment and soil productivity of agricultural lands in the major plain granaries in order to achieve sustainable agricultural production.

The project emphasizes the integration of trees and tree-crop systems in the landscape, agricultural ecosystems and watershed management.

Approach

- Integrating agroforestry systems in the agricultural landscape
- Strengthen cross-sectoral collaboration and inter-project synergy
- Developing concept for participatory forestry with farms cooperatives

Weaving knowledge into development

- Training governmental officers, cooperative farmers and technicians in areas such as agroforestry, conservation agriculture and landscape planning.
- Demonstrating good agroforestry and afforestation practices
