33rd International Symposium on Remote Sensing of Environment

Sustaining the Millennium Development Goals

May 4-8, 2009
International Convention Centre
Stresa, Lago Maggiore, Italy

www.stresacongressi.it

CIAO! You are cordially invited to the 33rd International Symposium on Remote Sensing of Environment (ISRSE) which will represent a major event in the long series of internationally recognized ISRSE meetings. The overall theme of the symposium is the use of Earth Observation systems and airborne techniques for understanding and managing the Earth environment with particular emphasis on resources and natural hazards. It will be structured along the societal benefit areas of the GEO initiative and specifically address how Earth Observation can support the UN Millennium Development Goals.

The symposium will include oral sessions and posters on vital issues of interest to scientists, policy makers and resource managers in the public and private sectors. The programme will feature speakers from around the globe sharing their experiences and knowledge on remote sensing applications and programmes during plenary, breakout and poster sessions.

The Joint Research Centre of the European Commission will be the host of the 33rd ISRSE supported by the International Committee on Remote Sensing of Environment (ICORSE). The ISRSE is a Symposium of the International Society of Photogrammetry (ISPRS).

An Announcement and Call for Papers for the Symposium will be posted on the symposia website www.symposia.org and sent to prospective participants in early June.

We invite you to have a great time, and to enjoy the symposium and your visit to Italy.
