

Global Map of Irrigated Areas

Version 3.0: Update for North America

Introduction

In Version one of the digital global map of irrigated areas was derived by combining large-scale maps with outlines of irrigated areas (Achtlich, 1980) and FAOSTAT data on total irrigated area per country around 1995. In the meantime map updates were incorporated to improve the map quality by:

- considering more sub-national statistics on the extent of irrigated areas;
- using a large number of irrigation maps, project reports as well as remote sensing products to locate irrigation schemes within the sub-national units;
- increasing the map resolution from a 0.5° raster to a 5' (0.0833°) grid.

By publishing an update for North America the new mapping methodology is now being applied for the entire globe. Therefore it was decided to publish the new global mapping product as version 3.

The quality of the irrigation map could be improved considerably for Northern America by using information on the acreage of irrigation in more sub-national administrative units (3,593 units for the United States and 269 census divisions for Canada). The incorporation of several high-resolution land use maps allowed the concentration of irrigation in areas of agricultural land use, which improved the map quality in particular in the more arid western part of North America.

However, in some sub-national units the irrigated area according to the sub-national statistics was higher than the irrigated area distributed according to the land use or irrigation maps. In these cases (mainly small islands along the coastline) the difference was distributed equally over the most suitable grid cells using the USGS landcover classification map. It was assumed, that irrigation may appear in grid cells classified as: "Dryland Cropland and Pasture", "Irrigated Cropland and Pasture", "Cropland / Grassland Mosaic", "Cropland / Woodland Mosaic", "Grassland", "Shrubland", "Mixed Shrubland / Grassland", "Savanna", "Herbaceous Wetland" and "Wooded Wetland".

The way the map was generated is documented per country and presented below.

Canada

Irrigated area as reported by the agricultural census 2001 is 784,469 ha in the 10 provinces of Canada [CA01]. Additionally there are 565 ha irrigated area in Yukon Territory and 7 ha irrigated area in the North-West Territories [CA02]. The figures are related to the year 2000. The total irrigated area in Canada is therefore 785,041 ha. Irrigated area per census division is documented in Annex A.

About 466,270 ha irrigated area is located in 13 official irrigation districts in the province of Alberta [CA03]. A map showing the outlines of these districts [CA04] was digitized and used thereafter to assign irrigated area to grid cells located in these irrigation districts. All the other irrigated area was assigned to cells classified as cropland in the GLC2000 land cover classification for North America [CA05]. In some census divisions the irrigated area as reported by the census was larger than the area classified as cropland by the GLC2000. Also in this case cells classified as cropland mosaics were assumed to be irrigated.

United States of America

According to agricultural census data collected by the National Agricultural Statistics Service (NASS) of the United States Department of Agriculture (USDA) the irrigated area in the conterminous US (including Alaska and Hawaii but excluding the islands of Puerto Rico, Guam, Virgin Islands and Northern Marianna Islands) was 55,311,236 acres in 2002 [US01], 56,289,172 acres in 1997 [US02] and 49,404,030 acres in 1992 [US03]. However, the water use estimate reports of the United States Geological Survey (USGS) reported a larger extent of irrigated areas. In these reports irrigated areas was reported to be about 57,900,000 acres in 1995 [US04] and 61,900,000 acres in year 2000 [US05]. All these figures relate to the area actually used for irrigation in the year of the census, the area equipped for irrigation is larger. So the Natural Resources Conservation Service (NRCS) of USDA estimated the area irrigated in 1997 or in at east two of the four years before at 67,500,000 acres [US06].

No information could be found on area **equipped** for irrigation on a sub-national level. Area equipped for irrigation was therefore estimated on a county-level by first combining the inventories of USDA and USGS on irrigated area per county in years 1995, 1997, 2000 and 2002. The maximum value of irrigated area per county reported for these years was derived and assumed to represent the area equipped for irrigation. For the outlying territories of the United States similar statistics provided by USDA and USGS as part of the census reports were used as long as they were available. For some counties all the inventories reported "no data". Then area equipped for irrigation was set to the value as reported by the agricultural census 1987 and published by Battaglin and Goolsby, 1994 [US07]. Since this inventory also reported statistics for units below the county-level it was used for downscaling of area equipped for irrigation in sub-county statistical units. Irrigated areas per federal state (or territory) computed by summarizing irrigated areas per county as reported by the different inventories is documented in Annex B. Irrigated area per county as used for the purpose of this map update adds up to 27,951,503 ha and is documented in Annex C.

A national land cover data set on a 30 m resolution [US08] was used to assign irrigated areas to specific cells within the sub-national units of the conterminous United States. Irrigated area of the sub-national units was equally distributed over all cells classified as orchards and vineyards (value 61), row crops (value 82), small grains (value 83) or fallow (value 84). If the sum of these cropland areas was smaller than the total irrigated area per sub-national unit, the remaining area was assigned to cells classified as pasture and hay (value 81). This appeared in the majority of the sub-national units in the states of Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming and in some sub-national units located in the states of Arkansas, Florida, Massachusetts, Missouri, Montana, Nebraska and Texas.

This land cover data set was not available for Alaska as well as for the islands of Hawaii, Puerto Rico, US Virgin Islands, Northern Marianna Islands and Guam. A similar land cover classification with the same resolution [US09] was available for the Hawaiian Islands. Irrigated area was assigned to all cells classified as cultivated land (class 4). Additionally areas close to cropland-cells and classified as grassland (class 5) were assumed to be irrigated on the islands of Honolulu and Kauai. The GLC2000 land cover classification for North America [US10] was used to distribute irrigated areas within the sub-national units of Alaska. The highest priority was given to cells classified as cropland (class 18). If

the sum of the areas classified as cropland was lower than the irrigated area as reported by the statistical surveys also cells classified as mosaic of cropland and other land cover types were considered. Irrigated area in Puerto Rico was distributed to areas classified as agriculture/hay/pasture on a recent land cover map published in [US11]. However, in some sub-national units of Puerto Rico the irrigated area according to the sub-national statistics was higher than the irrigated area distributed according to the land cover map. In these cases (mainly small islands along the coastline) the difference was distributed equally over the most suitable grid cells using the USGS landcover classification map (see introduction). Irrigated areas on the US Virgin Islands, Northern Marianna Islands and Guam was distributed according to the USGS land cover map only. The irrigated area was equally spread over some sub-national units if the USGS land cover map only has NODATA-values.
