Integrated land use

National Integrated Land Use Assessments (ILUA)/ TCP/ZAM/3007.

## Scope

- Carry out an integrated assessment of land use resources
- Produce a national land use/cover map
- Establish a national monitoring system of natural resources
- Develop an integrated land use assessment methodology that meets C&I for sustainable natural resource management

## Approach

- Develop national capacities in ILUA on close collaboration between various national land use institutions
- Integrated approach that allows analysis of relationships between different land uses: forests, trees outside forests, crops and livestock
- Link field data (including household survey) with remote sensing mapping

## Weaving knowledge into development

- Inter-sectorial collaboration in natural resource monitoring
- Long term monitoring of natural resources at national level
