# EUROPEAN PRICE REPORT

Issue 2/2019 February 2019

## Latest trends

February is traditionally a quiet month for fish consumption in Europe. Landings in European waters are generally poor at present due to the winter weather. Prices are trending upwards, despite lacklustre demand. Further price hikes are likely as Easter approaches.

## GROUNDFISH

Groundfish quotas have been reduced for 2019, which will lead to price increases. In Poland, demand is currently limited but catches have been poor recently and prices have started to move up.

### COD - in Poland (FOB, origin: Baltic Sea)

### Index for prices

Groundfish	7
Flatfish	8
Tuna	10
Small Pelagics	10
Cephalopods	11
Crustaceans	15
Bivalves	18
Salmon	19
Trout	20
Freshwater fish	21
Non Traditional Species	22
Seabass-Seabream-Meagre	23

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

Demand for cultured turbot has weakened in line with seasonal patterns, but prices have remained stable.

Meanwhile, consumption of wet-salted cod fillets from frozen raw material (*Gadus macrocephalus*) is rising and market prices are increasing strongly. For wet-salted cod fillets from fresh raw material (*Gadus morhua*) of Faroese and Icelandic origin, fishing is finally improving after months of poor catches. In particular, the Foroya banki fishing grounds near the Faroe Islands are becoming more productive.

Christmas is typically a strong sales period for these products, especially in the Southern part of the continent.

## TURBOT - in Spain, origin: Spain

## TUNA - BILLFISHES

Although there is little demand for finished product (canned tuna) in Europe at present, demand for frozen pre-cooked loins is strong.

Fishing in the Western and Central Pacific is still being affected by bad weather and is reported to be poorer than average. However, Bangkok Port remains congested due to the backlog of carriers and raw material inventories at local canneries remain healthy. Skipjack prices continue to decline.

## TUNA - Pacific Ocean

There is little change in the situation in the Indian Ocean as catches remain moderate-to-good and raw material inventories at local canneries are still healthy. The steady supply there has coincided with an increase in transhipment activities. Skipjack and yellowfin prices have increased slightly.

The second IATTC 'veda' in the Eastern Pacific ended 19 January, but fishing is reported to be very poor. Inventories at local canneries are now low even though raw material supply is being supplemented by carrier arrivals from the Atlantic Ocean, Indian Ocean and the Western and Central Pacific. As a result, skipjack prices have risen while yellowfin prices remain stable.

The two-month FAD closure in the Atlantic Ocean is in force until 28 February. Fishing is reported to be very slow and local canneries are starting to run low on raw material. However, skipjack prices have still fallen slightly (ex-vessel Abidjan) while yellowfin prices have dropped more sharply.

European prices for skipjack remain stable, while yellowfin prices continue to fall. The market price for cooked, double cleaned yellowfin loins has risen sharply due to the exhaustion of the duty-free loins quota.

## TUNA - Loins

## SMALL PELAGICS

In late November 2018, the EU28, Norway and the Faroe Islands agreed on a Total Allowable Catch (TAC) for Northeast Atlantic mackerel of 653 438 tonnes for 2019. This figure represents a 20 percent cut compared with 2018, but in fact the International Council for the Exploration of the Sea (ICES) had recommended a much more drastic cut, to just 318 403 tonnes.

In Poland, herring catches have been moderate and prices have been stable. Catches of sprat have been low but demand is good, pushing prices upwards.

## CEPHALOPODS

South African squid catches have been poor, which has supported improved price levels, although there is a large gap between the larger sizes and the S grade, which competes against many other species of the same size. The price gains have been partially offset by the strength of the local currency, which has performed well since the start of the year, but overall sellers are still targeting higher prices as they expect the market to firm before Easter.

Octopus supply from Indonesia is increasing in February with the arrival of the peak season for octopus and raw material prices have declined slightly compared with last month. Supply is expected to continue increasing until March. Demand for cuttlefish in Europe is limited, but prices are steady.

## SQUID - in Italy, origin: South Africa

## CRUSTACEANS

At present the supply of vannamei shrimp from Indonesia remains stable despite outbreaks of disease at some sites. The supply of large sizes has decreased while small sizes are slightly more plentiful. Overall, raw material prices are up.

Argentina reported good catches of shrimp for processing on land, leading to lower offer prices. As inventories remain high in Europe, there has been little demand for frozen-on-board shrimp and a typically slow market in the opening months of the year has led to sharp price declines. Demand is expected to increase again during Holy Week (the week before Easter) which, combined with fewer arrivals of land-frozen shrimp due to the delayed start to the fishing season, should result in higher prices later in April.

### ARGENTINA RED SHRIMP - origin: Argentina

European crab and lobster landings are traditionally low at this time of year. Lobster consumption tends to spike on Valentine's Day and demand for tropical lobster is high, but prices have stayed stable. The US market remains very strong on tails. Meanwhile, it's now off-season for Canadian lobster and there's little inventory left in Canada of whole lobster and cooked meat, meaning that prices at the start of the new season on 1 May are likely to be high.

### CRAB - in France, origin: Europe

### EUROPEAN LOBSTER - in Europe, origin:

## BIVALVES

There are fewer French bouchot mussels on the market at this time of year, as the official Baie du Mont Saint Michel bouchot season has been open since July. Irish and Spanish rope as well as Dutch bottom mussels are more widely available.

February is generally a relatively quiet month for bivalve consumption following end of year sales, with the exception of a boost to oyster consumption on Valentine's Day.

### MUSSEL BOUCHOT - in France

## SALMON

The new year has started well for the Norwegian Atlantic salmon industry, with EU export markets remaining the key drivers of revenue growth. The Norwegian Seafood Council (NSC) reported a 14 percent increase in the value of Norway's salmon exports in January compared with the same month in 2018, with higher exports to major processor and re-exporter Poland pointing to strong demand for smoked salmon in particular. Export volume increased by 2 percent over the same period, reflecting the higher price of farmed Atlantics in the first few weeks of 2019, although this gap was closing at the beginning of February as traders reported good availability of fish on the market despite Chinese New Year demand. The Fish Pool Index, which measures aggregate export prices for fresh whole Atlantics out of Norway, was at NOK 56.1 per kg as of week 5, a decline from NOK 65.6 per kg in week 1 but still above the NOK 53.69 per kg recorded in the same week in 2018. These price levels are well above historical norms, a consequence of a persistently tight market balance that was maintained in 2018 by farmed Atlantic production in Norway which came in some 60 000 tonnes short of expectations at 1 255 000 tonnes (source: Kontali). Meanwhile, in the UK, stable export prices for farmed Atlantics out of Scotland have been reported, with week 7 prices estimated at around GBP 5.30-5.40 per kg for 2-3 kg fish and GBP 6 per kg for 4-6 kg sizes. These levels are comparable to 2018 equivalents for smaller sizes but some increases have been seen for larger fish in year-on-year terms.

### Salmon - origin: Norway

Estimates for Norwegian farmed Atlantic production growth in 2019 vary somewhat, but the expected range is an increase of some 3-5 percent while global output is projected to rise by 4 percent overall. Demand is expected to be sufficient to absorb this increase without much difficulty and the average Fish Pool forward price for fresh whole Atlantics for the whole of 2019

is stable at NOK 61.16 per kg. For February 2019 and Q1 2019, consensus forward prices currently stand at NOK 56.25 and NOK 59.83 per kg respectively. The imminent exit of the UK from the EU remains an important source of uncertainty for the European salmon market, although the impact is likely to be considerably more significant from the perspective of the Scottish industry as opposed to those who export to the UK.

## TROUT

Good supply of farmed Norwegian trout is being matched by good prices, with fresh trout selling in the low NOK 60s per kg in early 2019. According to the NSC, Norway exported 4 000 tonnes of trout worth NOK 59 million in January, increases of 24 percent and 29 percent respectively compared with the same month in 2018. Belarus, the USA and Thailand were the leading export markets. Farmed trout biomasses were some 16 percent higher year-on-year at Norwegian farms in December and plentiful supply can be expected throughout early 2019.

## SEABASS SEABREAM

Prices for Greek-origin bass and bream in Italy have risen in February for most sizes, marking the start of the annual upward climb that typically peaks in early summer when demand for the species is strongest. However, the reported prices of EUR 4.10 per kg for bass and EUR 4 per kg for bream for 300-450 gram fish are still some of the lowest observed in February for the last 5 years. This is a continuation of an ongoing supply-driven price lull that has been threatening the sector over the last year or so and looks set to continue in 2019. A recent report from the Hellenic Seafood Consortium (SEAT) forecasts a 4.5 percent increase in Greek production of bass and bream in 2019, adding to the supply surplus that has caused the recent price decline. Meanwhile, in Turkey, bass and bream represented a major proportion of a 13 percent increase in aquaculture exports in 2018 and continued production growth is expected this year.
