LATEST TRENDS

No to Child Labour in Fisheries and Aquaculture

Children make up a large proportion of the labour force in fisheries. Children work as crew on fishing boats, as fish sorters, in fish processing factories, in fish marketing and trading and in households with fisheries-based livelihoods. They work in diverse activities such as handling and repairing nets, diving, draining boats, painting and cooking. They often work in a way that is incompatible with school attendance and hazardous to their health. FAO and ILO joined forces to fight child labour in agriculture, including fisheries and aquaculture. On the occasion of the World Day Against Child Labour (12 June) this year FAO and ILO launched their *Guidance on Addressing Child Labour in Fisheries and Aquaculture.*

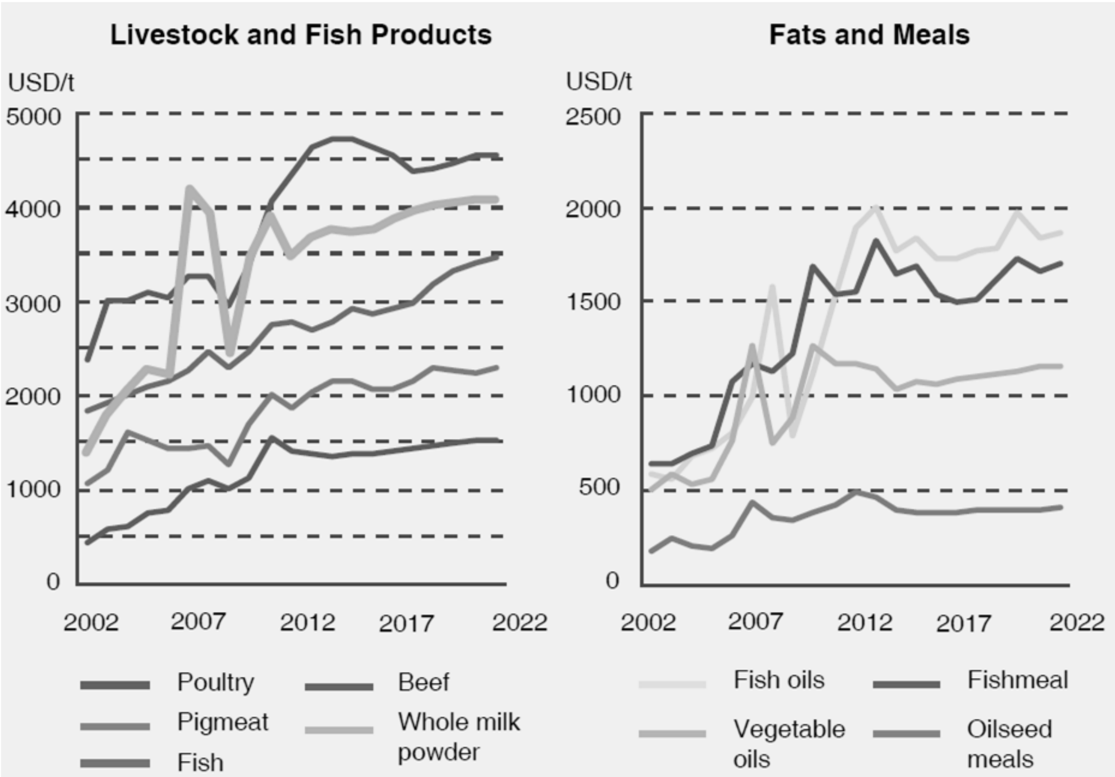
New FAO Food Outlook Issue (June 2013)

FAO Food Outlook is a biannual publication focusing on developments affecting global food and feed markets. The latest issue indicates that tight supply and higher feed costs for several key traded species such as salmon and shrimp are pushing international seafood prices higher. Overall supply is still growing thanks to aquaculture, with strong local and regional demand sustaining production growth in the developing countries.
For more information: www.fao.org/giews/english/fo/index.htm

OECD FAO Agricultural Outlook

On 6 June, OECD and FAO released officially their projections for the years 2013-2022 on production, trade, consumption and prices. According to the report, fish product prices are projected to rise strongly over the coming decade as a result of strong demand, rising production costs and slowing production growth with continuing price volatility associated with supply swings. Rising prices are also projected for fishmeal and fish oil to 2022 with continuing rapid growth in per capita consumption and slowing production trends. The full publication will be available on 26 June. For more information: www.oecd.org/site/oecd-faoagriculturaloutlook



Historical Agreement on Reform of Common Fisheries Policy

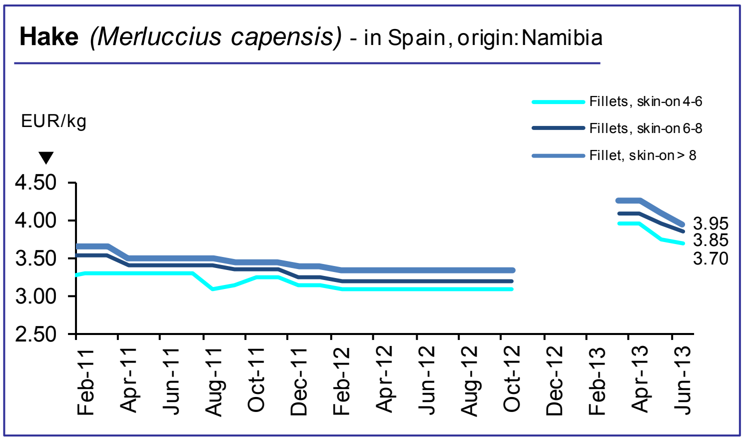
On 30 May, the European Commission welcomed the landmark agreement between the Council of Ministers and European Parliament on the reform of the Common Fisheries Policy (CFP). The agreement brings to an end a long process of consultation, the aim of which is to end overfishing and make fishing sustainable environmentally, economically and socially. It is hoped that the reform package will support sustainable sectoral growth, create job opportunities in coastal areas and ultimately provide EU citizens with a healthy and sustainable supply of fish.

GROUNDFISH

The **cod** market is extremely slow. According to the industry, there is no need to buy despite low prices. The predicted loss of money for ship-owners has become a reality. Small-sized cod is fetching a better price than bigger sizes.

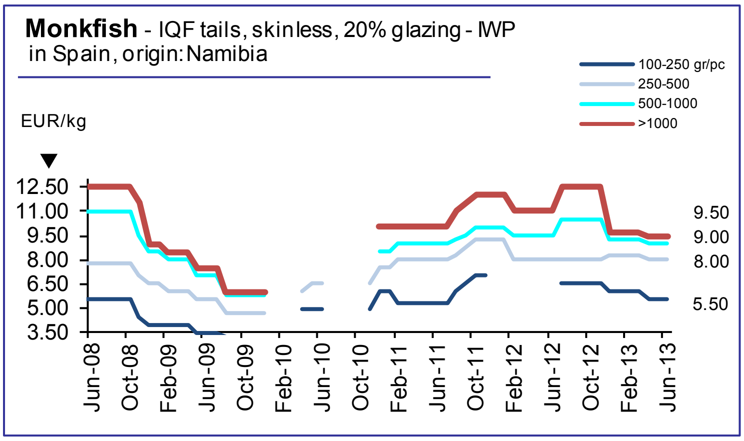
Norwegian cod exports increased in May for both fresh and frozen products, including fillets, compared with last year for a total of NOK 101 million and NOK 160 million respectively. On the contrary, exports of salted fish decreased. Clipfish (dried and salted fish) exports were at the same level as in May last year with an export value of NOK 257 million. Export sales comprise NOK 154 million for cod and NOK 90 million for saithe.

Some **hake** fillet of Namibian origin is now available on the **Spanish** market and prices have started to decrease.

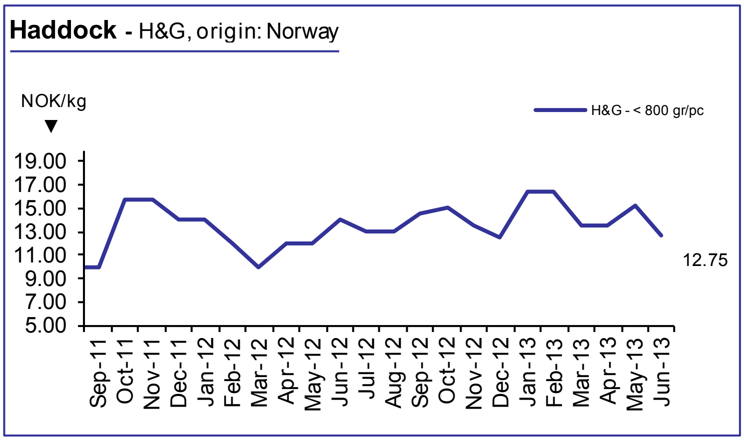


Hake *(Merluccius capensis)* - in Spain, origin: Namibia

Alaska pollock is the number one species exported by **Russia**, mainly to the South East Asian market. From 1 January to 4 June this year Alaska pollock catches in Russia have been reasonably good, amounting to 947 500 tonnes (949 400 tonnes for the same period last year). In the first four months of 2013, fish exports from the Russian Far East reached 623 900 tonnes (5% more than in the same period last year). The average export price for Alaska pollock grew by 2.5% from USD 1.18 in January-April 2012 to USD 1.21 per kg in January-April 2013.



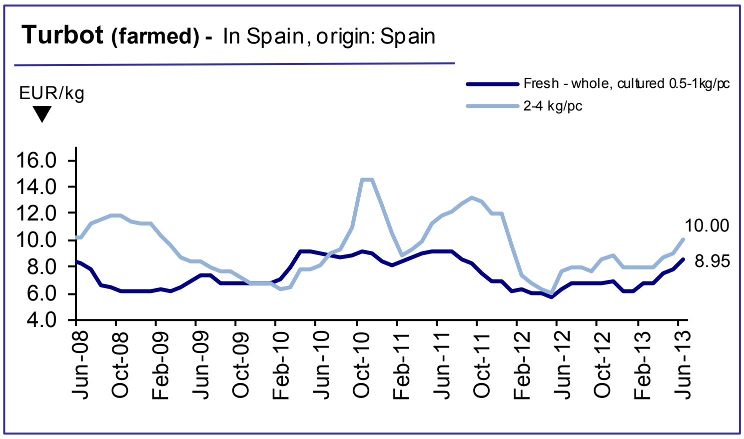
Monkfish - IQF tails, skinless, 20% glazing - IWP in Spain, origin: Namibia



Haddock - H&G, origin: Norway

FLATFISH

The **turbot** spawning season is slightly delayed this year and appears to have started only recently. Each year, in spring (generally from the beginning of May to the end of June), mature turbot move to shallow waters to spawn. The North Sea is the most important spawning area. Spawning normally takes place over several weeks and during this

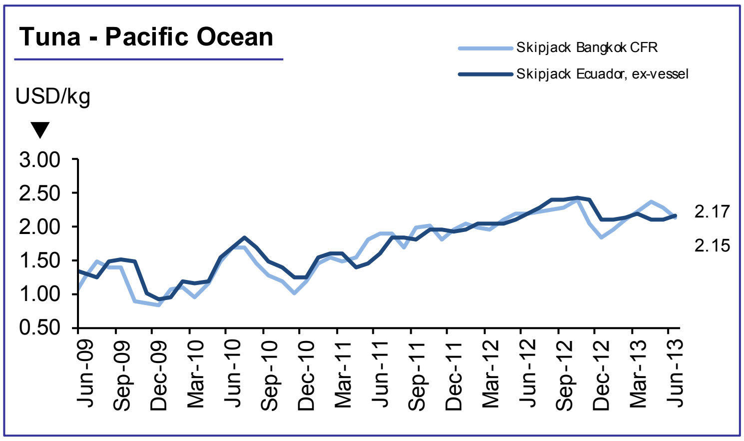


Turbot (farmed) - In Spain, origin: Spain time wild turbot is easier to catch with a subsequent increase in landings in this period. However, the flesh quality is lower in spring as turbot flesh retains more water, which is later released with the eggs. With higher volumes landed and lower quality fish, prices go down during this season.

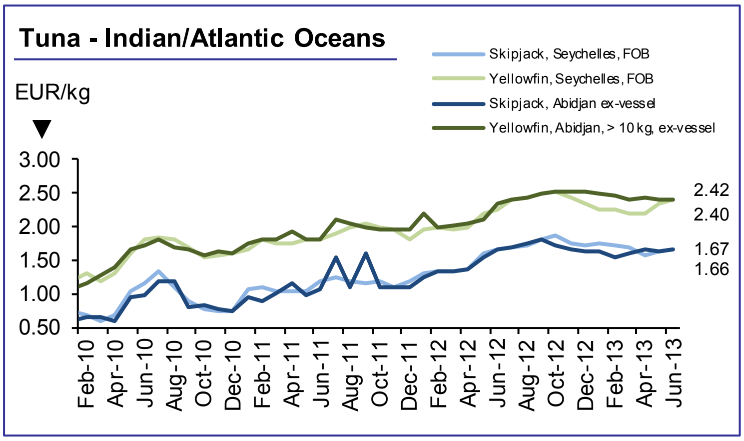
A shortage of farmed turbot continues to be reported this month in Spain. Consequently prices will continue to increase despite weak demand. However, catches of wild turbot from the North Sea should enter the market very soon, pushing prices down.

TUNA

Average fishing trends prevail for most fleets operating in the **Western and Central Pacific**. Most processors in South East Asia continue to hold large inventories of raw material because of a scarcity of orders with buyers apparently waiting for a decline in prices. Thus, skipjack prices have softened to USD 2 150/tonne CNF Bangkok for June deliveries. Several fleets are planning to perform maintenance and repair work on their vessels during the upcoming 4 month long FAD closure period, which will last from 1 July to 31 October.

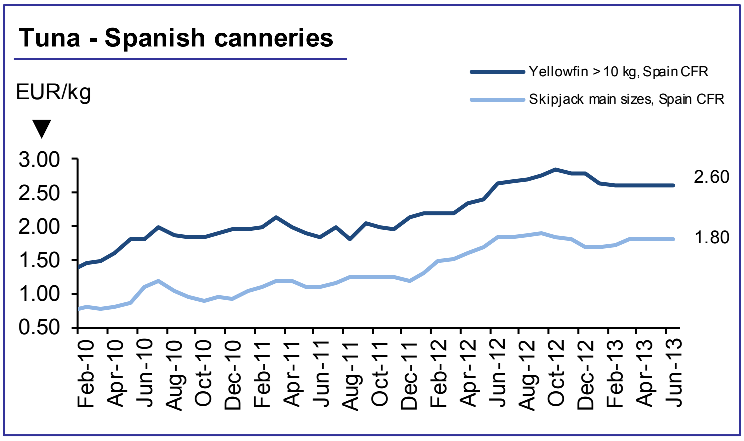


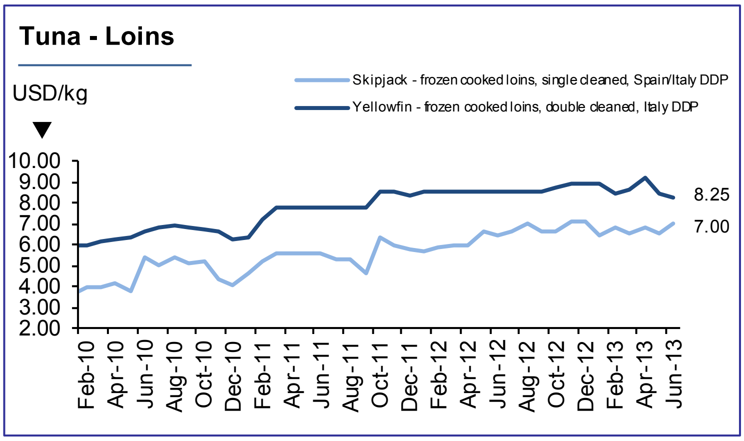
The **Eastern Pacific** fleets have been fishing regularly and supply has been steady with better fishing results compared with last year. However Ecuadorian waters have now cooled and a lack of raw material is expected in a couple of weeks. Processors in Ecuador have enjoyed strong demand. This is related to the fact that the price of raw material in Ecuador has been lower than in Bangkok for the past few months giving a clear cost advantage to the Latin American producers, especially for the EU market where Ecuador and certain other Latin countries have duty free access compared with 24% duty on imports of tuna products from Thailand. With increased demand for fish, the price of skipjack has been firm at USD 2 150/tonne to USD 2 200/tonne ex vessel Manta.



Bad weather and strong currents have affected fishing efforts in the **Indian Ocean**. A number of vessels suffered some damage to nets and other equipment further limiting their capabilities. Therefore, prices have increased, even if only slightly, to EUR 1 670/tonne FOB Seychelles for skipjack and EUR 2 400/tonne FOB Seychelles for yellowfin 10kg and up.

Moderate fishing continues in the **Atlantic Ocean**, especially along the north west African coast. Several vessels have moved down to the middle of the African coast and to the Gulf of Guinea in the hope of better results. Prices have risen slightly to EUR 1 660/tonne ex vessel Abidjan for skipjack and EUR 2 425/tonne for yellowfin.





In **Europe**, yellowfin continues to trade at EUR 2 600/tonne CFR Italy and Spain. Skipjack prices in Spain remain similarly unchanged at EUR 1 800/tonne ex cold store.

As of the end of May, the **EU** 2013 zero duty quota of 22 000 tonnes has been completely filled.

SMALL PELAGICS

In **Russia**, **herring** catches during the first five months of 2013 have been very good and reached 191 600 tonnes, corresponding to a 54.9% increase over the same period last year. Herring is the second largest product species exported by the Russian Far East - after Alaska pollock - with a share of 22% of total fish exports, amounting to 134 900 tonnes. The average export price for Pacific herring grew by 8.2% from USD 0.73/kg in January-April 2012 to USD 0.79/kg in January-April 2013.

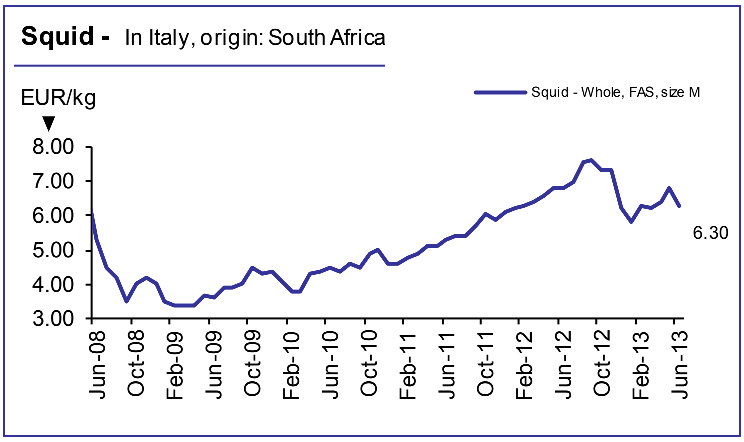
At present, there is no fishing for fishmeal and oil production in **Iceland** and will remain so until late June when **herring** and **mackerel** fishing should start. However, it is reported that one vessel has been out searching for mackerel with disappointing results. The research cruise reports good findings of local herring, which indicates that the biomass has recovered after being infected with a virus a few years ago.

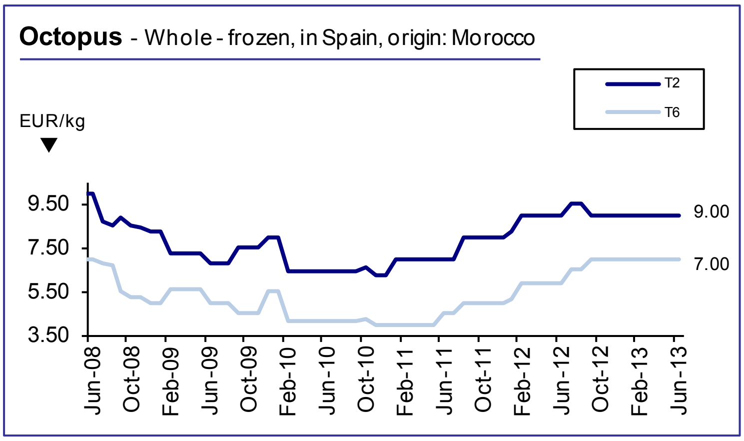
In **Denmark** 30 417 tonnes of **sand eel** were reported in mid-June, bringing the official total delivered to Denmark to 176 173 tonnes (against the Danish quota at 249 000 tonnes). The sprat season is now over, with official total at 95 628 tonnes (against 84 909 tonnes last year). Fish oil yields have remained lower than normal. For fishmeal, Danish producers report fairly good demand.

The **Norwegian sand eel** fishery has been poor lately and the Ministry has decided to extend the season by one week up to 30 June. Total catches presently amount to only 29 124 tonnes against the 42 450-tonne quota. Seawater temperatures are now improving and consequently also fish feed sales. Total fish feed sales at the end of week 22 were 368 091 tonnes, down 21% on last year's figures.

Norwegian herring exports went up by NOK 23 million in May to a combined total value of NOK 169 million. However, despite the good sales last month, overall herring exports from Norway during the first five months of 2013 fell 42% to NOK 1.1 billion. **Mackerel** followed the reverse trend with sales falling by NOK 70 million in May to a total of NOK 43 million. However, so far this year, mackerel exports have increased by NOK 415 million to a total of NOK 574 million.

CEPHALOPODS

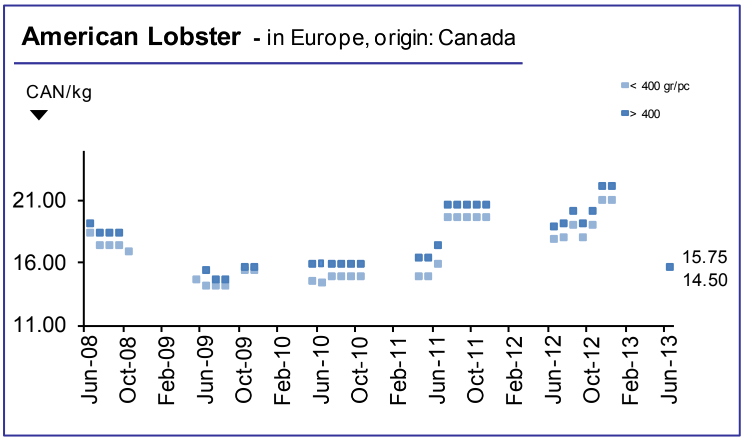




In South Africa, east coast **squid** catches continue to be very poor. There was some sign of improvement two weeks ago but winter storms have put a stop to catching at present. Despite the lack of stocks and poor landings, prices have weakened. The South African currency has dropped dramatically against Euro during last month. This will improve receipts per kilo by about 15%, providing some small relief. However, the problem is that oil and other imports are in US dollars and therefore overall costs are expected to increase.

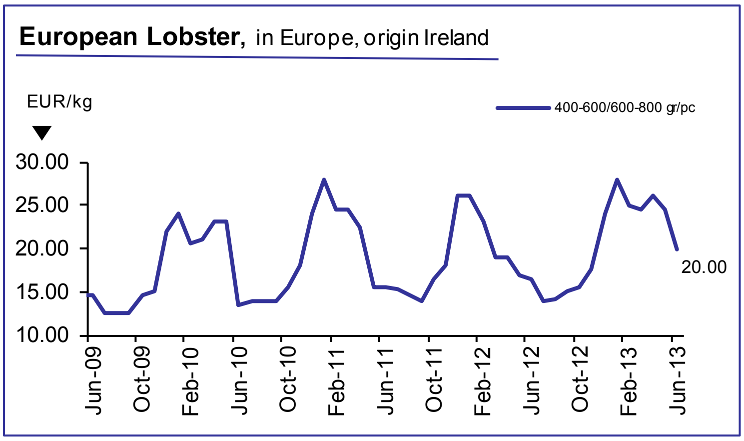
Mauritania, the tenth biggest supplier of **cephalopods** to Europe, is currently observing a biological stop. In 2012, 12 950 tonnes of cephalopods were exported by Mauritania to the EU. Total cephalopod imports by the EU in 2012 amounted to 482 000 tonnes, with Spain (189 500 tonnes) and Italy (153 300 tonnes) as major markets. Top suppliers to the EU (excluding Spain – 83 900 tonnes exported to EU) were India, Falkland Islands, Morocco and China.

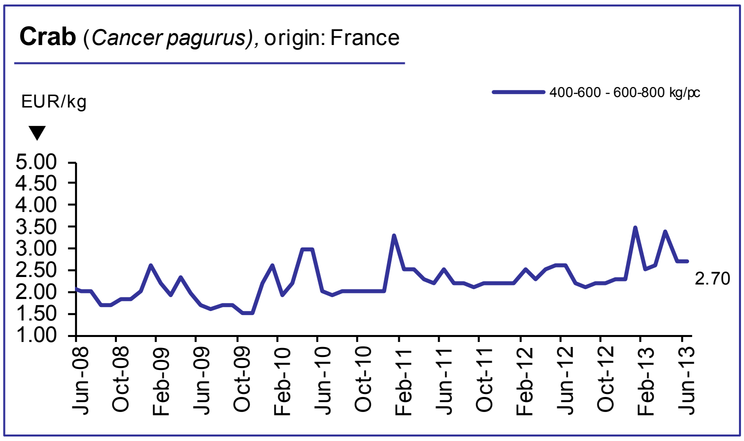
CRUSTACEANS



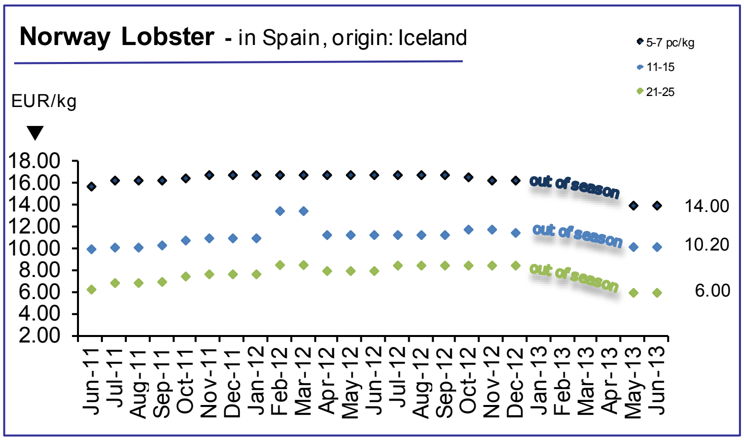
Demand for **American lobster** on the European market is generally slow, with old stocks still available. Consequently, the new season's prices are extremely low.

Exceptionally cold spring temperatures in northern Europe and in France continue to affect fishing conditions and shellfish growth, leading to low landings for the season. Consequently, prices remain quite high. Demand for **crab** is expected to increase as cooking factories have started their purchases to build new inventory. Landings for ***Homarus gammarus*** should improve soon as the warmer weather arrives.





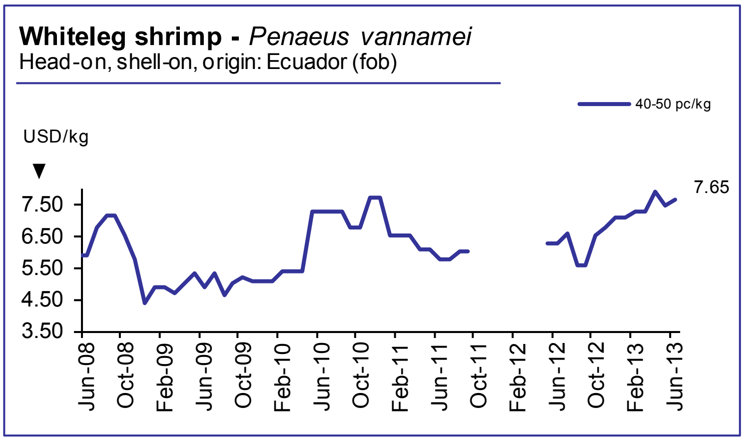
Norway lobster prices are relatively stable.



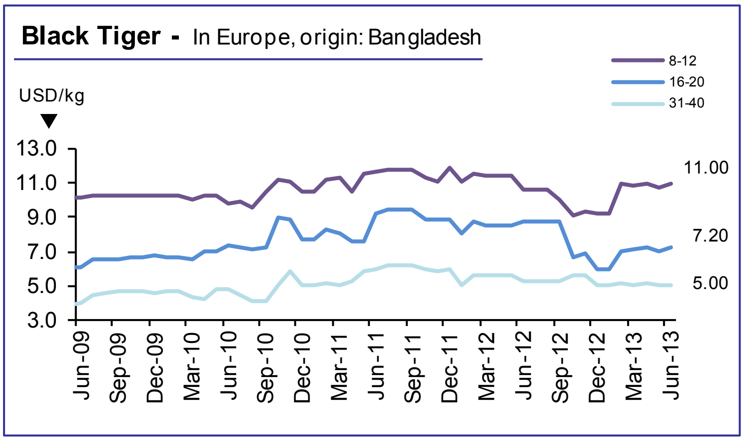
SHRIMP

The price situation for **vannamei** is very unstable at present, with prices increasing every day because of the supply shortage. The European market is very slow as buyers cannot agree to the high prices offered by big packers who use US-based prices as a barometer.

During the first quarter of 2013, Spain lost its position of top shrimp importer on the European market with a 7% decrease in volume and a 13% decrease in the value of its imports compared with the same period last year. France takes the lead with 23 546 tonnes imported during the first quarter of 2013, for a total of EUR 135.7 million, corresponding to a slight increase on 2012 figures.



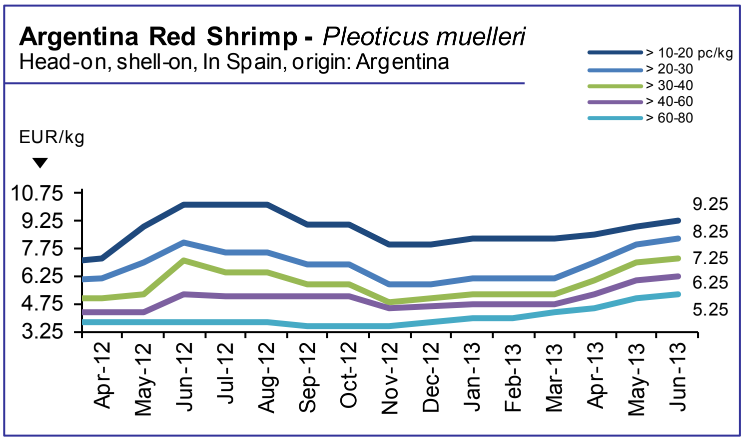
In India, the switch from ***Penaeus monodon*** (black tiger) to ***Penaeus vannamei*** (whiteleg shrimp) has had a huge impact on India's shrimp production. Marine Products Export Development Authority (MPEDA) estimates that the exports of vannamei shrimp, farmed mainly in Andhra Pradesh and Odisha, increased to USD



730 million during the 2012-13 fiscal year against USD 385 million in the previous year. In volume vannamei exports reached 91 000 tonnes against 40 787 tonnes the previous year.

In Thailand, many shrimp processing plants in the eastern and southern parts of the country have temporarily reduced or suspended production as the shrimp disease EMS has cut supplies. The higher cost of labour and the strengthening baht have also dampened the industry's growth this year. The president of the Thai Frozen Foods Association, said the outbreak of early mortality syndrome (EMS) has caused shrimp production to drop by more than 50% from the normal level of 200 000 tonnes to about 90 000 tonnes in the first half of this year. Shrimp production in the first quarter was 63 000 tonnes, while it was 3 000 tonnes in April, 8 700 tonnes in May and is expected to be 8 000 tonnes this month. The raw material price has climbed from THB 160 (USD 5.2) to THB 240 (USD 7.8) for size 50 pc/kg and from THB 100 (USD 3.3) last year to THB 150-160 (USD 4.9-5.2) for sizes 100 pc/kg currently. The association predicts that the volume of Thai shrimp exports will drop by 30-40% in volume this year. However, the export value will not decline as much because producers have tried to add more value to their products. According to Commerce Ministry data, the value of shrimp export in the first four months dropped 19.3% year on year to USD 643 million.

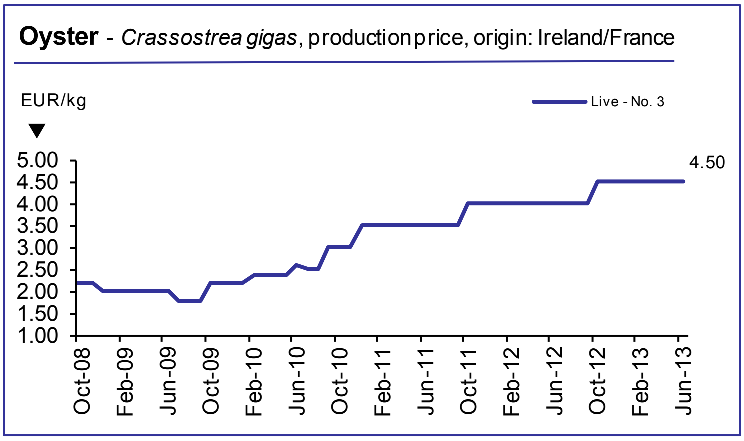
Argentine red shrimp prices on the European market remain at yearly highs, in the absence of stock and limited product availability. Fishing in national jurisdiction waters opened in late May with good results, although slightly lower than 2012. The shortage of supply is expected to continue until mid-July when sufficient products from national jurisdiction waters reach the European market. Therefore prices are expected to remain high until then.



BIVALVES

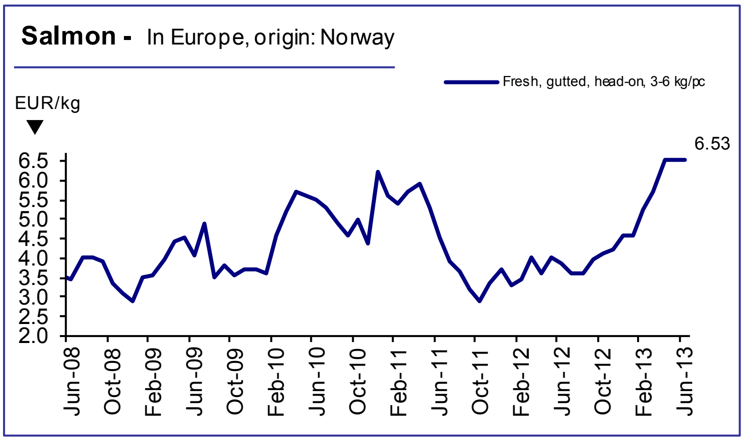
On the French market Spanish and Italian origin *Mytilus galloprovincialis* is present in substantial quantities. Small sized Bouchot **mussels** are still available in the French market. With regard to *Mytilus edulis*, cold spring temperatures mean that the season in Ireland will be longer as spawning has been delayed. The Dutch auction season has come to an end but the Netherlands are still trading mussels of other origins (mainly Ireland).

In France, the number of **oyster** larvae catches has been abundant this year, but mortalities have now started. Currently prices remain strong because of low supply.



This year, the top Seafood Prix d'Elite at the European Seafood Exposition in Brussels was awarded to a bivalve/cephalopod product: Squid and Apple Black Pudding with **Scallops** and Minted Pea Purée. It is a convenient, ready-to-cook version of a favourite British dish. Now in its thirteenth year of honouring the finest new seafood products entering the market, the Seafood Prix d'Elite competition continues to grow in importance and prestige. 25 840 buyers and sellers from 145 countries attended the show this year and 1 697 exhibiting companies came to showcase their seafood, seafood products, equipment and services. According to organizers, the growth in the number of participants is an indication that the fishery industry remains strong even in the poor economic conditions in Europe and proves that companies from around the globe find value in meeting face-to-face and in the relationships developed at the exposition.

SALMON/TROUT



Despite some softening of prices in June, prices of farmed **Atlantic salmon** remain extremely high. Demand is surprisingly strong despite increasing resistance from processors who are struggling to pass on the higher raw material prices to retailers. The coming months may see some uncertainty as larger volumes will become available from Norway during the summer months and wild salmon will reach the US market from Alaska and Canada. A slowdown in the Brazilian, Russian and Chinese economies will also impact the demand for salmon.

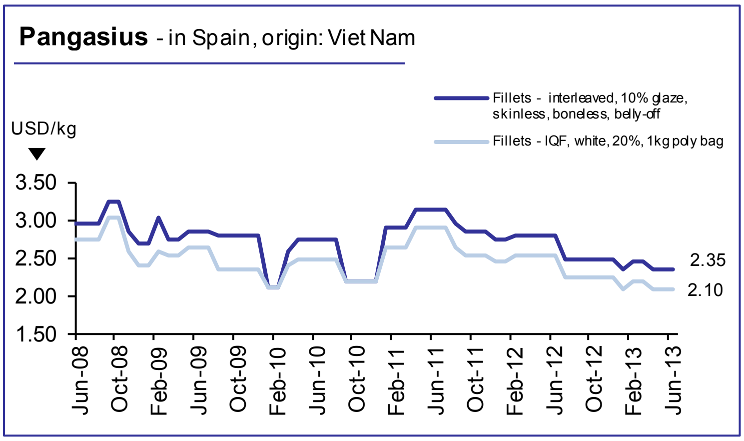
The strength in demand is shown by export figures from Norway, which during the first five months of 2013 totalled NOK 14.5 billion, 27% more than the same period last year. Volumes, though, fell by 3.2%. It should also be mentioned that producers are facing dramatically higher feed costs this year. Yields have also been lower caused by slower growth as a result of low water temperatures during the winter and recurring problems with sea lice.

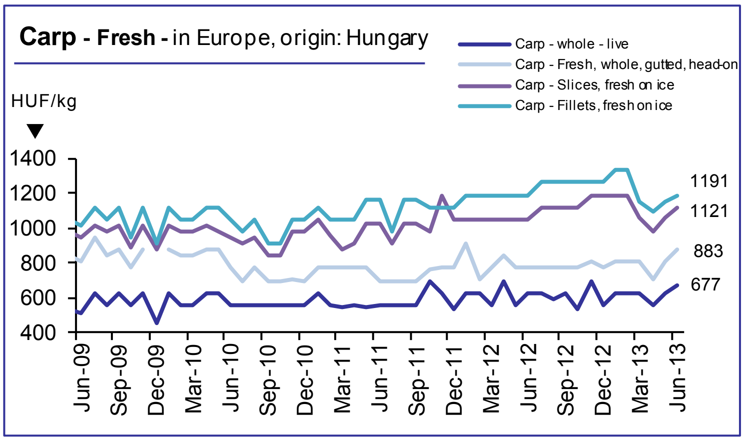
Norwegian trout exports for the first five months totalled NOK 843 million, up 21% compared with 2012. Russia and Belarus are Norway's largest trout markets.

FRESHWATER FISH

On the Spanish market, sale prices of frozen **Nile perch** fillets are still very low despite present high fresh prices in Tanzania and Uganda.

In Hungary, sale discounts for **common carp** and **bighead carp** have ended this month. Regular prices have increased slightly.

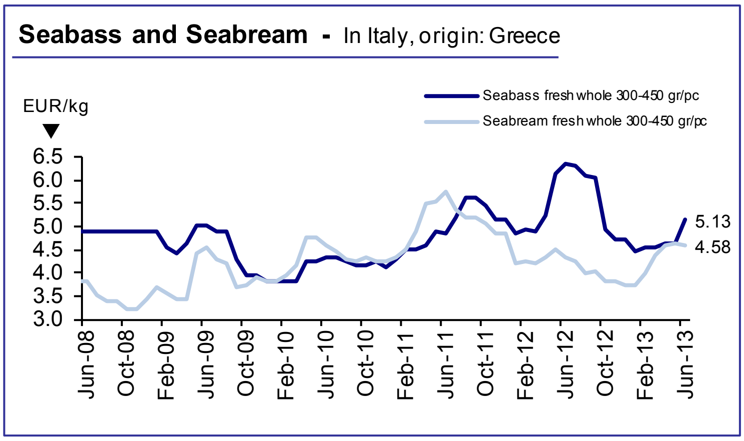


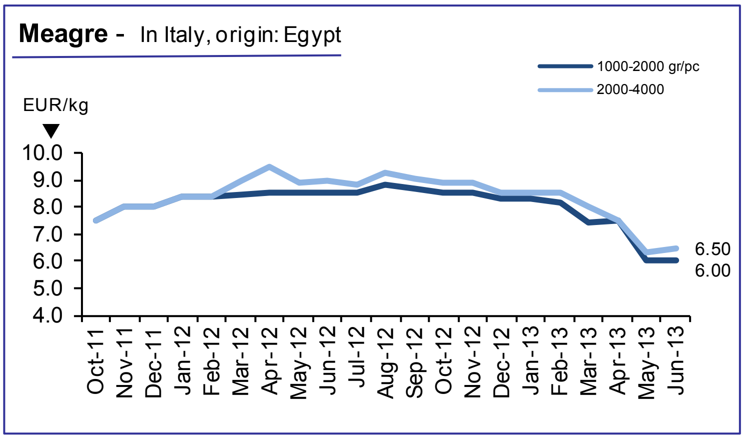


SEABASS/SEABREAM/MEAGRE

With the seasonal rise in water temperatures in the Mediterranean, producers reported good growth and rising volumes are now reaching the preferred market size of 350 gr and upwards. At the same time, demand in the large metropolitan cities in Europe is contracting as schools close and many families start spending week-ends elsewhere. **Bream** prices in particular have seen some declines during June whereas **bass** prices held firm and are even edging higher for some producers.

The Greek publicly quoted companies have published results for the first quarter. The companies for the most part are showing growing sales and profitable operations but results are weaker given the markedly higher feed costs compared with earlier periods.





Fish Species Trade Name	Product Form	Grading	Price per kg As stated	EUR	USD	Reference & Area	Origin
