LATEST TRENDS

INTRODUCTION

Several conferences during the last month have highlighted how the whitefish market has been revitalized thanks to the recovery of a number of wild whitefish stocks and the continued growth of farmed whitefish species.

In Rio de Janeiro, the **INFOPESCA-FAO conference on tilapia** presented the latest trends for a species whose annual production now has reached 3.5 million tonnes. Production is expanding in Asia, South America and Africa with new supply targeting domestic and regional consumption rather than international markets. Demand in Europe for the species continues to be limited and the species certainly needs some active marketing and promotional activities in order to gain awareness in the market. All INFOPESCA-FAO conference presentations on tilapia are available at www.infopesca.org/tilapia.

Then in Vigo, the **CONXEMAR-FAO Whitefish congress** brought together world experts on major whitefish species. Although some stocks are still under pressure, the recovery of cod in northern European waters has created a new market for fresh cod in Continental Europe. Finally, the **Groundfish Forum** held in mid-October in Austria brought industry leaders together to discuss the supply situation and demand trends.

The World Trade Organisation (WTO) and fisheries *29-31 October 2013, St. Petersburg, Russia*

http://eurofishmagazine.com/news/367-the-wto-and-fisheries-regional-workshop

World whitefish markets used to be dominated by traditional groundfish species, such as cod, hake, saithe, and pollock, among others. With the advent of aquaculture this has completely changed the picture, and tilapia and catfish not only have gained inroads in traditional groundfish markets but also permitted the sector to expand substantially and to reach new consumer groups.

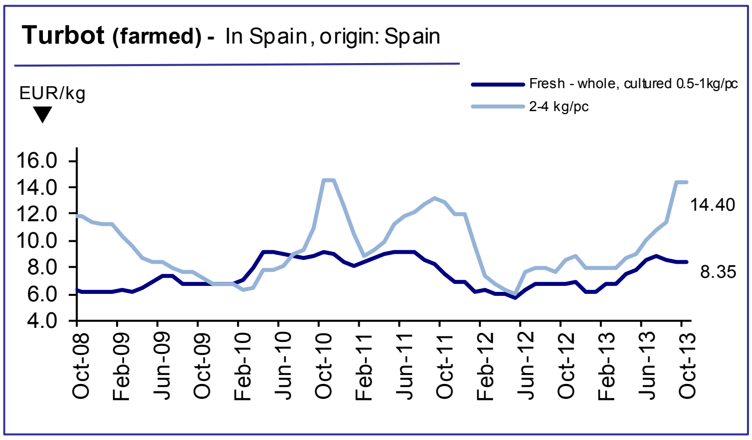
GROUNDFISH

In September, the value of exports of **Norwegian cod**, **saithe** and **haddock** totalled NOK 932.4 million. This represents an 11.4% increase in value and a 15% increase in volume on last year's figures. Exports of **clipfish**, in particular, showed a marked increase with Portugal as the biggest market.

In September, **Norway** raised the minimum first-hand **cod** price by between NOK 0.25 and 0.50 per kg. For the larger sizes, prices were increased by NOK 0.25, while for the smallest size (under 1 kg) prices were raised by NOK 0.50. Last year, Norwegian minimum cod prices were reduced in anticipation of the 33% increase in the cod quota for the Barents Sea.

This month **Norway** and **Russia** agreed on quotas for 2014 for **cod** and **haddock** in the Barents Sea. The ICES recommendation for the cod quota was followed, with the 2014 quota set at 993 000 tonnes, just 7 000 less than this year's quota. However, the 2014 haddock quota was set somewhat higher than the ICES recommendation at 178 500 tonnes, or 10.75% down on this year's quota. In June ICES had recommended a cut of 25% to 150 000 tonnes for 2014. Norway's share of the cod quota will be 443 735 tonnes, while Norway will receive 88 115 tonnes of the haddock quota for 2014. The haddock quota has already been cut quite drastically in the past two years, from 318 000 tonnes in 2012 and to 200 000 tonnes in 2013. This had led to a very large increase in the price of haddock already this year.

FLATFISH



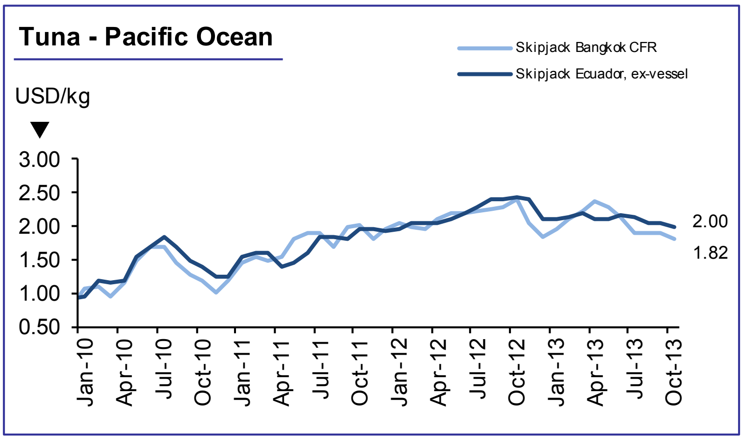
Turbot demand on the European market has been quite low after the summer season. The fish stocks in farms have started to recover and therefore prices remained stable. No major changes are expected for this month, although a further drop in demand is anticipated.

In general, **flatfish** prices are reported to be stable on the European market.

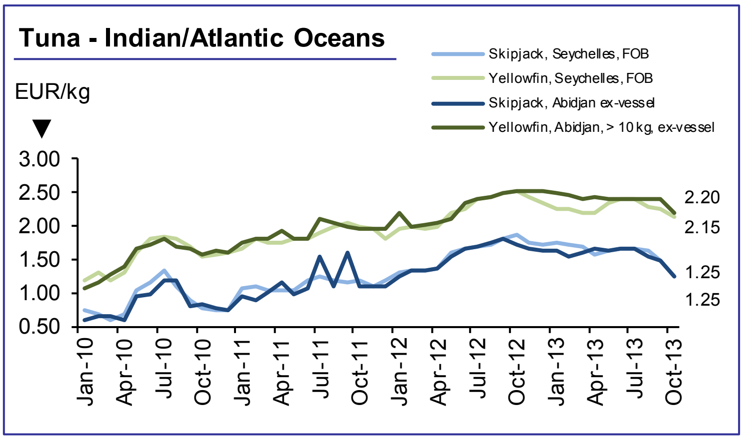
TUNA

With the WCPFC FAD closure in its final month (lasting from 1 July to 31 October) catch volumes in the **Western and Central Pacific** remain low. In spite of diminished supply, prices have dropped to USD 1 820/tonne CFR Bangkok.

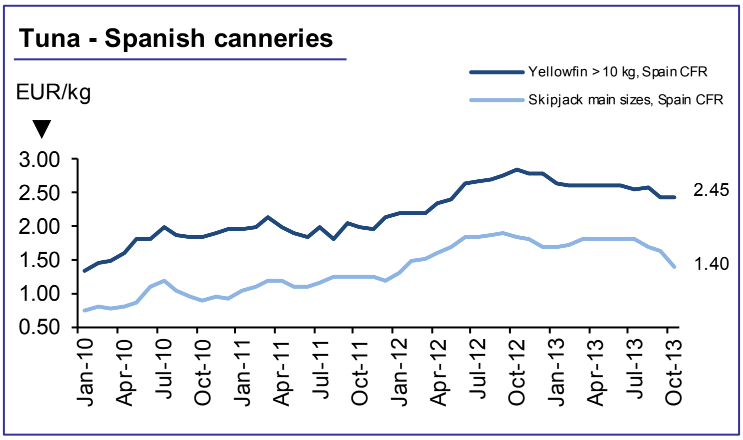
The IATTC closure period ended on 28 September in the **Eastern Pacific**. Fishing has resumed for the 35% of the fleet that observed the 'veda'. The closure will resume again on 18 November for the remaining 65% of the fleet (the second IATTC closure period will last from 18 November to 18 January 2014). Fishing volumes in the Eastern Pacific are good and are reported to be 13% higher than last year for skipjack. Manta skipjack prices are now at USD 2 000/tonne ex vessel. However, there is growing concern among Ecuadorian tuna producers regarding the decrease in demand from exporters of tuna finished products, in spite of decreasing prices of raw material. The decrease in supply of pre-cooked loins and canned tuna for some reason is not encouraging importers to purchase. In addition, decreasing raw material prices from Thailand concerns the sector even more.

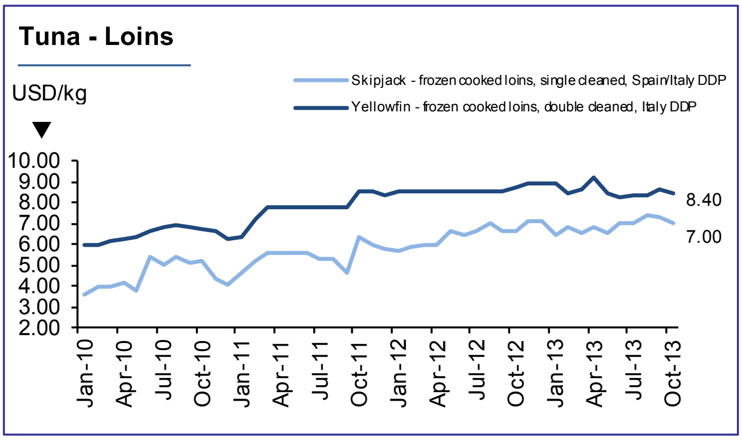


Skipjack fishing in the **Indian Ocean** continues to improve. Skipjack prices have softened to EUR 1 250/tonne FOB Seychelles. Yellowfin has also decreased to EUR 2 150/tonne FOB Seychelles.



Fishing vessels in the **Atlantic Ocean** continue to catch skipjack and yellowfin, although not as much as in recent months. Skipjack sale prices have gone down to EUR 1 250/tonne ex vessel Abidjan. Yellowfin prices have also dropped to EUR 2 200/tonne.





The softening of prices in all oceans, especially the Atlantic, is affecting **European** prices, where skipjack prices in Spain have dropped once again, this time to EUR 1 400/tonne CFR. Yellowfin prices remain stable at EUR 2 450/tonne CFR Spain. In Italy, yellowfin prices have decreased by about EUR 100 to EUR 2 500/tonne CFR.

SMALL PELAGICS

During the past few months, the **Russian** market has been experiencing a deficit of **herring** with reduced imports of **Atlantic herring** on the one hand and increased exports of **Pacific herring** on the other hand. As a result of quota reductions of Atlantic herring, main suppliers have decreased their shipments to Russian companies and consequently Russian producers been affected by a severe shortage of raw materials in the European part of the country. During the first 8 months of this year, Russian herring catches increased by 38% compared with the same period in 2012 to a total of 205 100 tonnes, of which 184 000 tonnes (+60%) was Pacific herring and 21 100 tonnes (-36.7%) was Atlantic herring. However, in the same period, Russian herring exports went up by 73% compared with 2012 to 190 700 tonnes, and therefore almost all volumes of herring caught in Russia were exported, mainly to Southeast Asian markets, particularly to China. The average export price of Pacific herring during the period January-August 2013 went up by 6% compared with 2012, from USD 0.74/kg to USD 0.78/kg. In contrast, imports of Atlantic herring (mainly from Norway, Iceland and the Faroe Islands) have decreased considerably, by 19% for whole round herring and by 31% for herring fillet and other herring products. On the Primorie region wholesale market, Pacific herring is currently sold at RUB 36.00/kg (EUR 0.83/kg). In Moscow, the wholesale price for Pacific herring starts at RUB 42.00/kg (EUR 0.96/kg), while the price of Atlantic herring ranges from RUB 50.00 to RUB 78.00/kg (EUR 1.15 to 1.61/kg). Considering the shortage of herring and the upcoming seasonal demand, it is expected that prices will continue to rise during the 4th quarter of 2013. It is reported that the market for herring declined by 34% during the first 8 months of this year compared with 2012 and this trend is expect to continue in coming months.

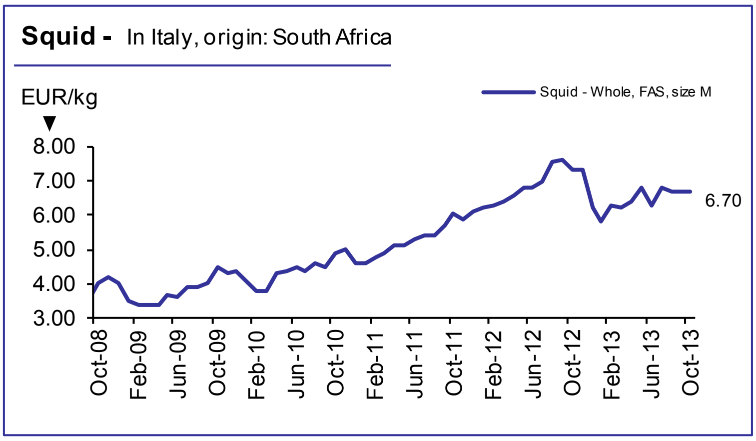
In **Iceland**, the spring spawning **herring** landings are somewhat reduced, bringing the total to 68 470 tonnes against the Icelandic quota of 93 058 tonnes. The total for **mackerel** reached 137 742 tonnes, and now exceeds the annual Iceland quota by 11 731 tonnes (the 2013 quota being 126 011 tonnes), which will have to be deducted next year (allowed quota flexibility). Fishing of local herring is expected to start later this month (against this year’s available quota of 78 708 tonnes). All volumes should go for human consumption, a small part for freezing and the main part for filleting, and therefore the total trimmings for oil and meal could be around 30 000 tonnes.

For **Denmark**, landings are modest for **oil and meal** because of adverse weather conditions, with an official total of 128 154 tonnes for North Sea sprat and 11 735 tonnes for the Norway pout.

The **Norwegian** North Sea trawlers have recently reported improved catches of **Norway pout,** for a total of 29 607 tonnes (all for oil/meal) against the Norwegian quota of 157 000 tonnes, although catches have been down because of challenging weather conditions. **Mackerel** landings brought the total to 137 738 tonnes (all for human consumption) against the 163 154 tonne quota and some spring spawning **herring** landings have been reported, a fishery with two seasons Q1 and Q4, where Q1 landings were around 137 399 tonnes against the 376 757 quota, with balance of the quota to be caught now during Q4. ICES recently published the 2014 quota advice for **Barents Sea capelin**, recommending a quota for the coming season of only 15 000 tonnes. This stock is managed co-jointly by **Norway** and **Russia**, with a fixed quota of 60% for Norway and 40% for Russia. The TAQ was only 200 000 this year, compared with more than 300 000 in 2011. For 2013 total landings are estimated at around 70-75 000 tonnes of capelin delivered for fishmeal and fish oil in Norway. The total capelin biomass this autumn was estimated at 3.8 million tonnes, of which 1.3 million tonnes was estimated to be spawning stock. The stock has been classified as having full reproductive capacity, but the background for the decreased quota is a combination of smaller fish and increased mortality because of record strong cod and haddock stocks feeding on the capelin. The Barents Sea capelin and Icelandic capelin are separate stocks. It is reported that Icelandic scientists have just recommended a preliminary quota for the **Icelandic capelin** of 160 000 tonnes. This quota is typically adjusted during the winter, depending on the findings of the later biomass assessments. Last year, for example, Iceland set a preliminary TAC of 300 000 tonnes, which was later increased to 570 000 tonnes.

There will be no production of anchovies from Peru until next month because of the present ban proposed by Peruvian authorities. The new fishing season will open from 12 November to 31 December in the North/Central area with a general quota of 2 304 000 tonnes and on 30 October in the South with a quota of 430 000 tonnes.

CEPHALOPODS



The **squid** situation in **South Africa** is not improving. Catches remain very poor. Thus quoted prices are rather speculative and do not reflect the situation in a more realistic market if some reasonable volumes were landed. The six-week closed season for squid will start shortly and continues till late November. Hopefully when fishing resumes, there will be some encouraging signs.

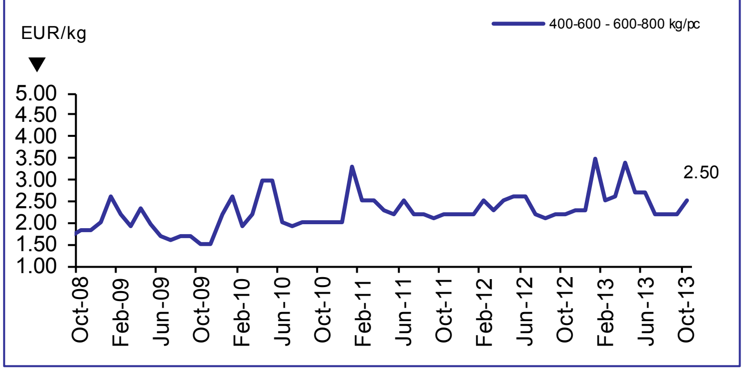
In **Indonesia,** the **octopus** season has started with the beginning of the rainy season, although not in all areas of the country. An improvement in octopus landings is reported.

Peru and **Chile** landings for ***Dosidicus gigas*** (giant squid) are very poor. Demand from the Asian market is reported to be low as stocks are still available in cold storages, and also because demand from the Japanese and Russian markets is low. Compared with last month, a small increase in demand is recorded for boiled products, which however is not coupled with a price increase. As far as the European market is concerned, demand for tentacles from Spanish canning factories has increased considerably this month and a slight increase in demand for fillets is also reported.

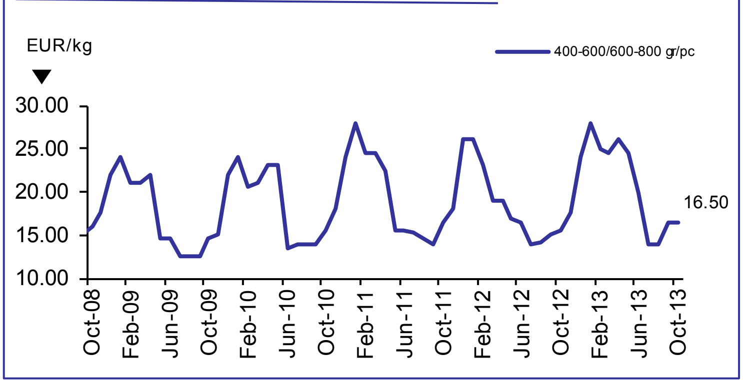
CRUSTACEANS

European crustacean prices, such as *Cancer pagurus* and *Homarus gammarus*, are more stable now thanks to improved weather conditions and subsequent better landings. Crabs have now reached the best quality period and prices are reasonably stable before the main consumption season.

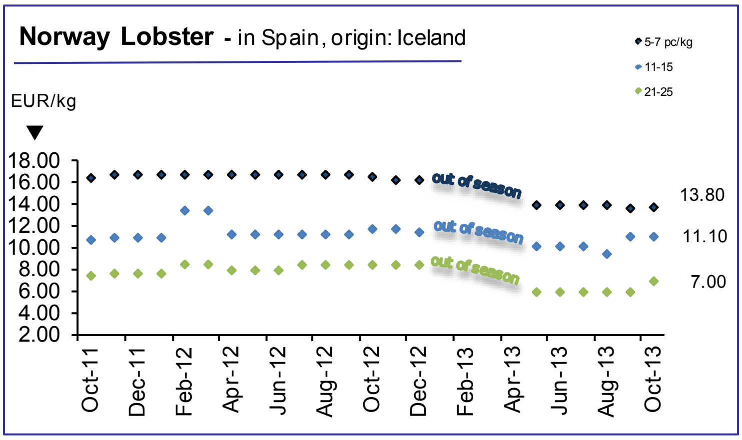
For the fall season, **American lobster** is available mainly from Maine where shore prices are unstable at present. The last five weeks have been very difficult with slow catches because of bad weather conditions and fishermen's prices have gone up over USD 1.50/lb.



Crab (*Cancer pagurus*), origin: France



European Lobster, in Europe, origin Ireland

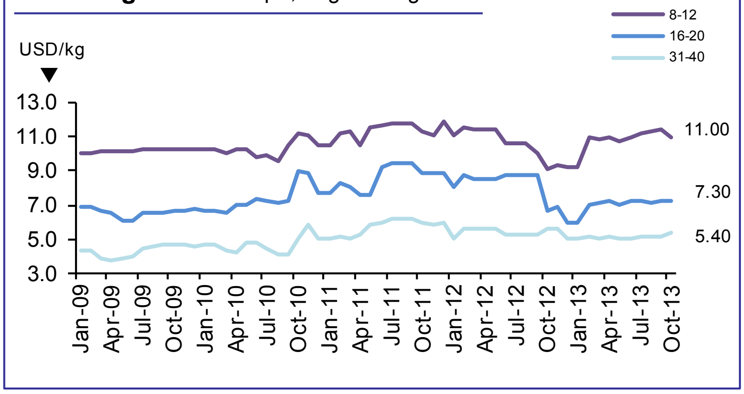


Norway Lobster - in Spain, origin: Iceland

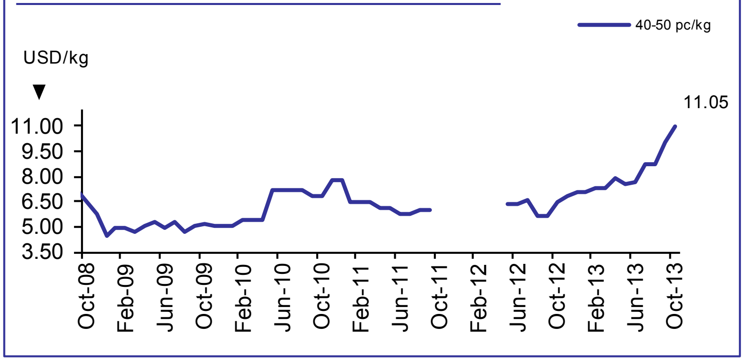
Shrimp

Early mortality syndrome (EMS) continues to be the number one concern among **shrimp** producers in numerous countries, even surpassing production and feed costs. At the Global Aquaculture Alliance's annual conference, which took place in Paris at the beginning of the month, specialists discussed the situation, which is leading to increasing prices and tightening supplies and is causing concern worldwide. It seems that no immediate solution can be expected to eliminate the problem quickly although the cause of the disease has now been clearly identified.

Vannamei prices continue to increase this month and new records have been set. The decline in production and supply from Asian

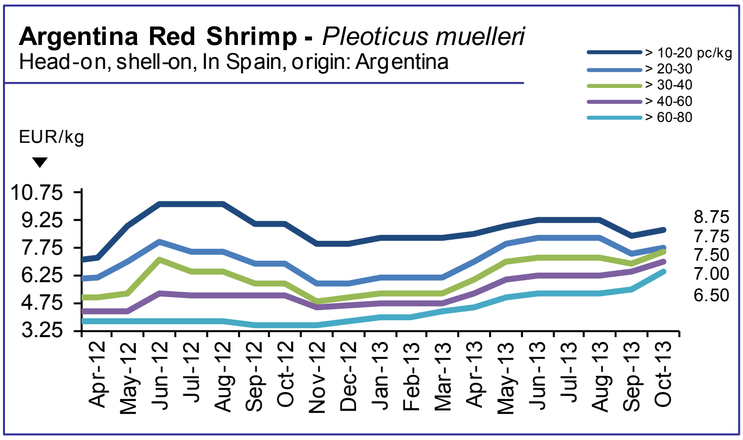


Black Tiger - In Europe, origin: Bangladesh



Whiteleg shrimp - *Penaeus vannamei*
Head-on, shell-on, origin: Ecuador (fob)

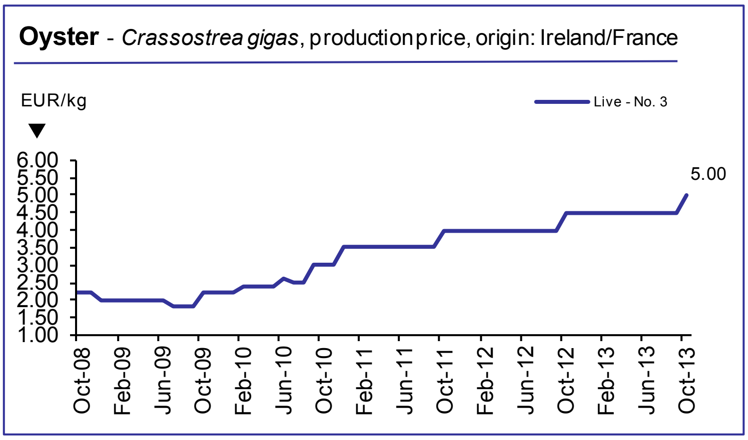
countries and Mexico, as a consequence of EMS, has increased demand for products from Latin America and India. The USA has purchased more shrimp from Ecuador. Mexico, Central America and Asia, which are traditionally shrimp exporters, are presently looking for products in America and in India not only to cover domestic demand but also to meet commitments with their customers. In Europe high prices are discouraging consumers and imports continue to decrease, particularly in Spain.



The vannamei shortage also affects other shrimp product prices. The strong Asian demand pushes all shrimp prices up including those of **Argentine red shrimp,** which is used as a substitute for vannamei. In addition, there is a fear that the shortage will affect end-of-year promotions and therefore many customers have brought forward their sales in order to ensure supply during this traditionally high consumption period. There is also concern about the increase of import tariffs by the European Union scheduled from January 2014 with an increase from 4.2% to 12%.

A new FAO Fisheries and Aquaculture Report entitled "Early Mortality Syndrome (EMS) or Acute Hepatopancreatic Necrosis Syndrome (AHPNS) of Cultured Shrimp" was released this month. The report focuses on this emerging disease that has devastated the shrimp industry of China, Malaysia, Thailand and Viet Nam over the last three years. For more information: http://www.fao.org/docrep/018/i3422e/i3422e.pdf

BIVALVES



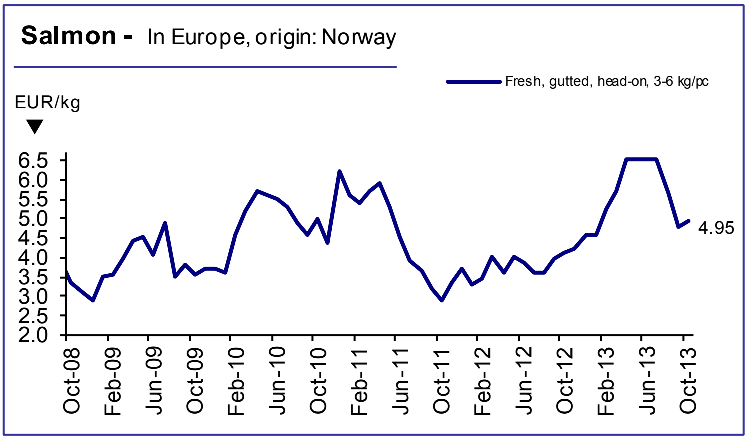
Oyster prices remain very strong on the European market as a result of decreasing supply following constant high mortality in adult sizes in the last few weeks. The situation is causing concern among stakeholders, particularly with the coming end-of-year period when the highest volume of production is sold. Oyster prices are expected to increase further in coming months.

On the **European** retail market the offer for French Bouchot **mussels**, rope mussels, as well as Dutch mussels is quite good. Spanish *Mytilus galloprovincialis* is also present but is now facing greater competition from French and Dutch *Mytilus edulis*.

In **Chile**, **mussel** harvesting is expecting to resume in November, with an increase of raw material prices from CLP 160 to CLP 180.

In **Peru**, the **scallop** harvest is reported to be good but demand is rather unstable. One of the reasons is because the French market stopped buying.

SALMON



The market for **Atlantic salmon** has tightened somewhat in the European market. Prices remain substantially higher than the same period last year, providing generous margins to European producers. Although high prices have boosted export values from Norway by 29% to NOK 27.3 billion, volumes are down 6%. The drop in export volumes is part of the explanation for higher prices but also a reflection of increasing resistance from buyers. The EU market has proven the most resilient with imports from Norway down only 1%. In fact, the EU now represents 69% of Norway's market, up from 65% last year. In this sense, Norway's dependence on the EU has increased, making it more vulnerable to any changes in the EU's import regime for Atlantic salmon. However, exports to France, the biggest market, declined by 6%, while exports to Poland, the second biggest market and mostly a processor of salmon, increased by 9%. Eastern Europe imported 17% less Norwegian salmon than in the same period last year with the biggest declines for Russia and Ukraine. The volume of exports to Asia went down by 13%, with exports to Taiwan Province of China, Japan and China showing the largest drop.

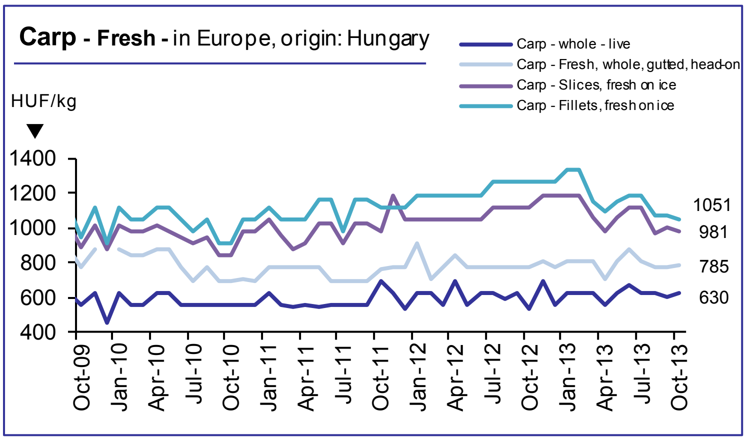
TROUT

Higher prices boosted Norwegian exports on stable volumes. The value of Norway's exports in the third quarter was up 30% compared with the same quarter last year reaching NOK 1.6 billion. Volumes totalled 40 000 tonnes, up only 1% compared with the same period last year. Russia remains the principal market for **Norwegian trout**, with a 48% share of exports, followed by Belarus and Japan.

FRESHWATER FISH

Nile perch prices continue to be high and catches in **Lake Victoria** are very poor, causing strong pressure on the market.

In **Hungary**, prices for **carp** continue to increase slightly.



SEABASS/SEABREAM/MEAGRE

Uncertain demand and ample supply from both **Greek** and **Turkish** producers have pushed **bass** prices somewhat lower this month whereas **bream** prices seem to have stabilized for the moment. Compared with the same period last year, bass prices are currently about EUR 1.00/kg lower while bream is trading at roughly the same level as in October 2012.
