WHY BEAN?

Phaseolus vulgaris L.

Family: Leguminosae - **Genus:** *Phaseolus*

Diploid species ($2n = 2x = 22$)

Annual and predominantly self-pollinating (autogamous) species

- The most important **food and feed legume** for direct consumption
- Crucial **protein, vitamin and mineral source** for farmers in Latin America and Africa
- **Health benefits** and human disease prevention (lower risk of obesity, diabetes, cardiovascular diseases, and colon, prostate and breast cancer)
- Major role in development of **sustainable crop systems**
- Development of genomic tools and genetic resources for **plant breeding**

BEAN ADAPT

THE PROJECT

ERA-CAPS

ERA-NET for Coordinating
Action in Plant Sciences

GbS on 11,500 Accessions
Resequencing 560 genotypes
Transcriptomics and
Metabolomics
Population genomics
Admixture mapping
GWAS

**Genes for
adaptation**

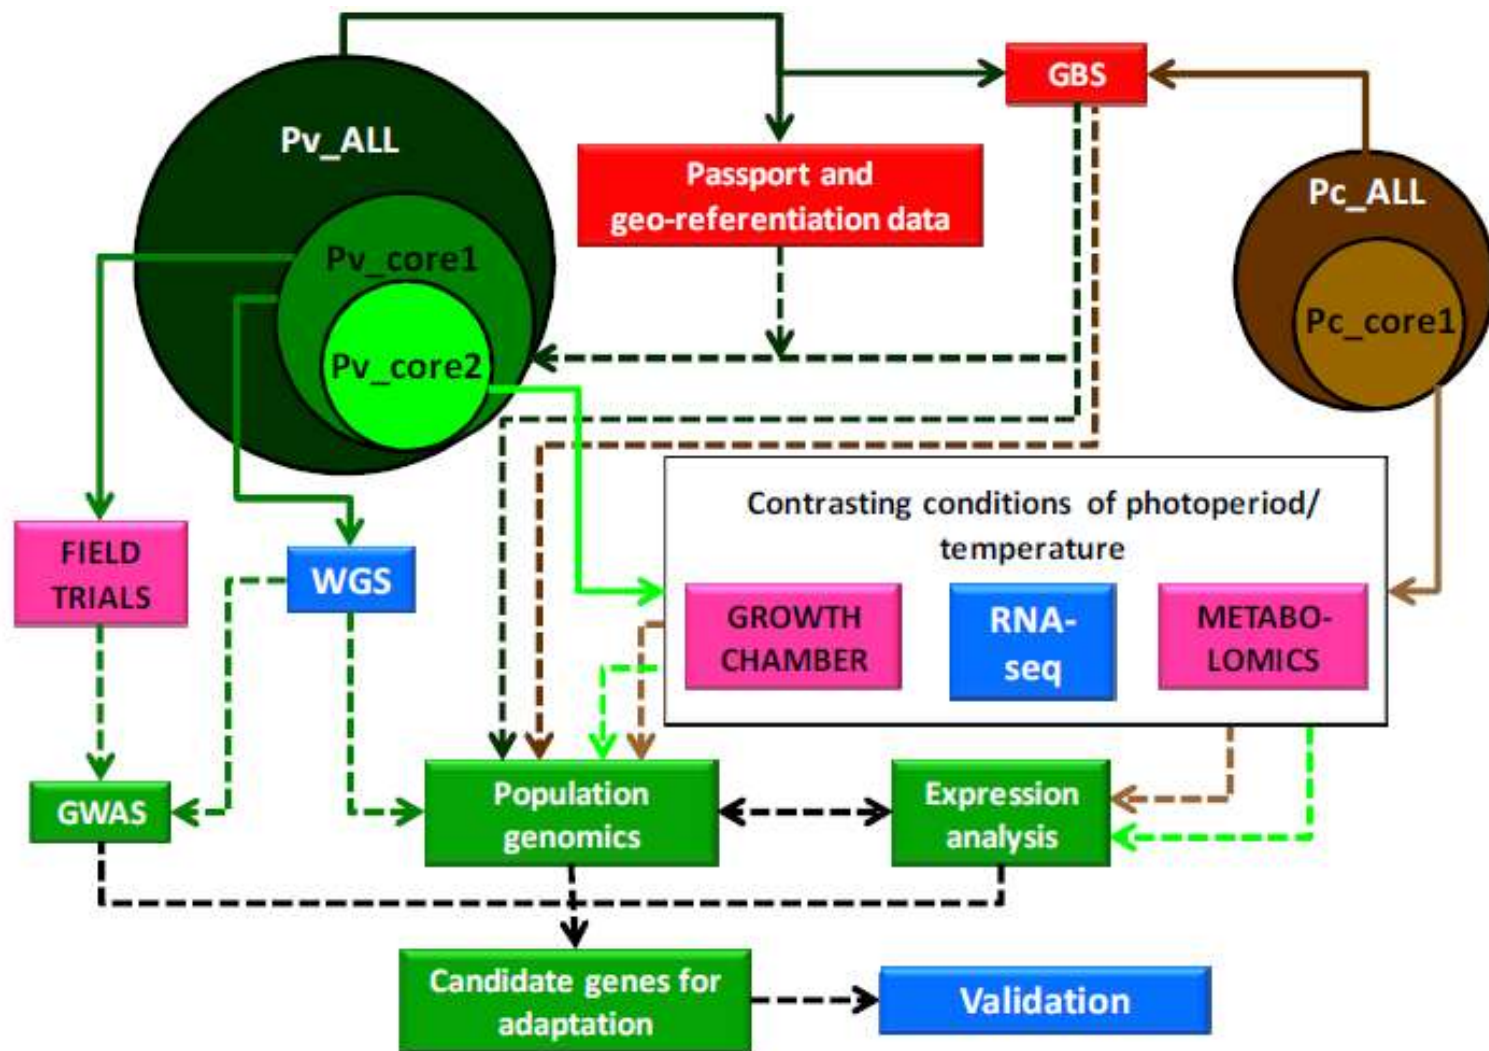

Pv_ALL: GbS

Pv_core1: GbS WGS, phenotyping (MLFT)

Pv_core2: GbS WGS, phenotyping (MLFT), molecular phenotyping: Metabolomics and transcriptomics under tropical short-day vs a temperate long-day environment simulation

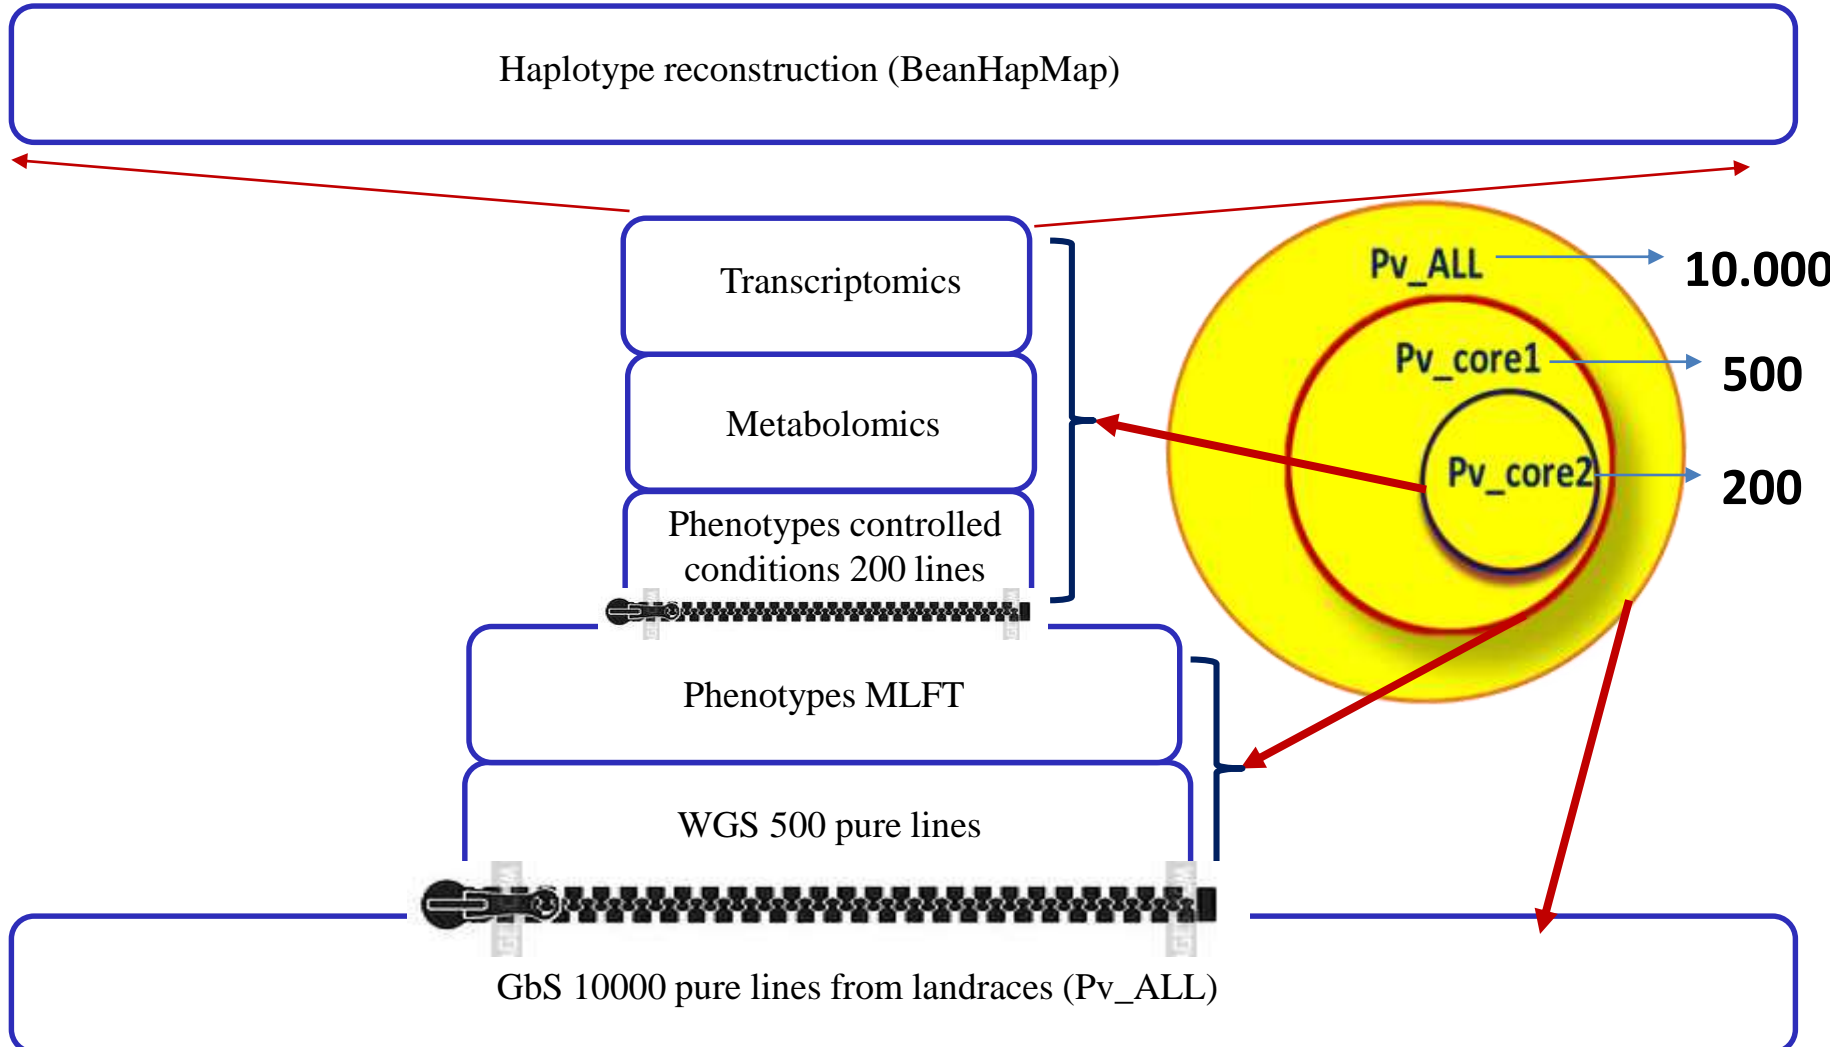

MAIN DELIVERABLES

- Computed **haplotypes** from 500 Pv_core1 accessions, and haplotypes for Pv_ALL.
- List of genes and phenotypes showing **signature of selection**.
- List of **loci** significantly associated with **traits and environmental** variables.
- Improved **expression** associated genome **annotation**.
- List of strong candidates for **validation**.
- List of **validated candidates**.

BEAN ADAPT

BEAN_ADAPT Kick-off meeting 11 August 2015, Bonn, Germany

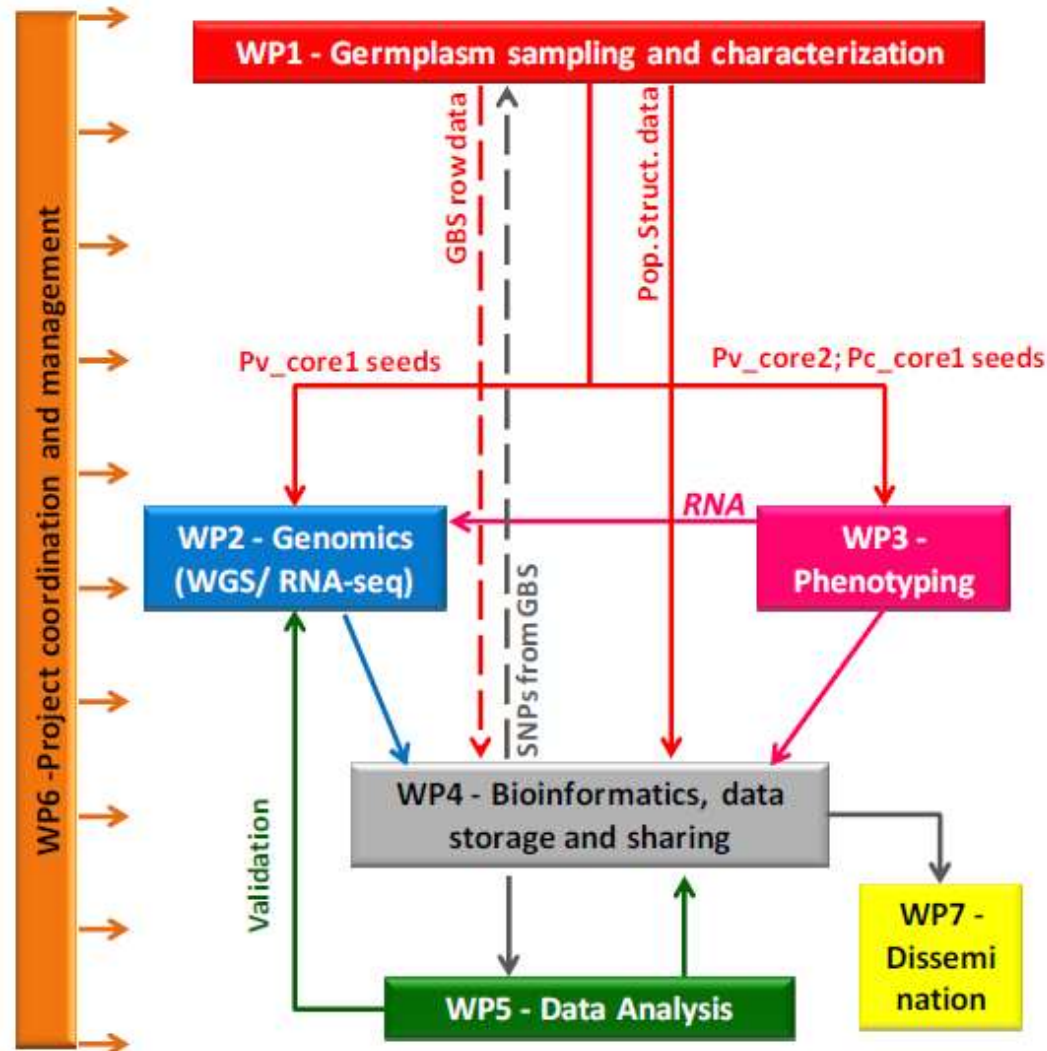

Expanding the scope and the impact

Associated Partners

- Phenotyping, Field Trials
- Phenotyping, nutritional value
- Phenotyping, seed traits
- Phenotyping, abiotic stresses and roots
- Genetic resources
- Information (genomic information)
- Molecular data
- Dissemination
- Ex situ Conservation 10,000 lines
