

Food and Agriculture
Organization of the
United Nations

The background of the cover is a photograph showing a series of rolling hills or mountains covered in dense green forests. The lighting creates strong shadows and highlights on the ridges, giving the scene a three-dimensional and textured appearance.

Rome, 2015

The Global Forest Resources Assessment

Sustainably managed forests provide essential goods and services and thus play a vital part in sustainable development. Reliable and up-to-date information on the state of forest resources is crucial to support decision-making for investment and policymaking in forestry and sustainable development.

FAO, at the request of its member countries, regularly monitors the world's forests and their management and uses through the Global Forest Resources Assessment (FRA). More information on the FRA 2015 process, other publications and online database is available on the FRA web site (www.fao.org/forestry/fra).

The FRA process is coordinated by the Forestry Department at FAO headquarters in Rome in coordination with partners in the Collaborative Forest Resources Questionnaire (CFRQ). These six partners are: the Central African Forest Commission (COMIFAC/OFAC), FAO, FOREST EUROPE, the International Tropical Timber Organization (ITTO), the Montréal Process, and the United Nations Economic Commission for Europe (UNECE).

The designations employed and the presentation of material in this information product do not imply the expression of any opinion whatsoever on the part of the Food and Agriculture Organization of the United Nations (FAO) concerning the legal or development status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. The mention of specific companies or products of manufacturers, whether or not these have been patented, does not imply that these have been endorsed or recommended by FAO in preference to others of a similar nature that are not mentioned.

Introduction

This document is one of three main publications of the Global Forest Resources Assessment 2015 (FRA 2015). It contains data for most of the quantitative and Boolean variables collected through FRA 2015. For a set of summary analyses the reader is encouraged to see the publication *How are the world's forests changing?*¹ It provides a picture of the current state of the world's forest resources and of the main changes that have occurred over the last 25 years. The third publication is a special issue of the journal *Forest Ecology and Management*.² The peer-reviewed papers that form this special issue contain a more detailed set of analyses, based on both FRA 2015 data and other data sources.

In addition to these publications, country reports containing the source data used in this document can be downloaded and analysed, together with a wide range of additional data sources and output formats, through the Forest Land Use Data Explorer (FLUDE). The Forest Land Use Data Explorer is an active analytical tool designed to provide easy access and analyses of FRA and other land use data.

The main reference documents used for the desk reference are:

- Country reports and desk studies:³ the reports contain detailed information on the sources of data and documentation on calculations.
- Guide for country reporting for FRA 2015:⁴ the guide explains both the general reporting methodology and provides specific guidance for preparing Country Reports.
- Terms and Definitions document:⁵ the document provides definitions for all terms and categories reported in the country reports. Most definitions are complemented by explanatory notes.

For more on FRA 2015, see the article by MacDicken on "Global Forest Resources Assessment 2015: What, why and how?"⁶ or the FRA website.⁷

How to read and use this document

FRA 2015 provides data and analysis covering 234 countries and territories. One hundred and fifty-five reports were prepared by national correspondents nominated by government agencies responsible for forestry. The remainder comes from desk studies prepared by FAO which provide estimated values for forest statistics in countries that did not submit a country report. While the number of desk studies is high, in total they amount to only 1.2 percent of global forest area.

The tables in the desk reference are structured according to the questions of the country reports. The names of countries and territories used in these tables follow standard UN practice regarding nomenclature. Countries and territories are listed in alphabetical order and readers should note that country names are not displayed whenever data are not available. Unless otherwise stated, the information provided in these tables is derived from the FRA 2015 country reports.

The desk reference is intended to be an online publication that can be downloaded and printed. It is designed to be printed and spiral-bound so that it lays flat for ease of use.

Contributors

A list of contributors to the country reports can be found on the FRA 2015 webpage.⁸

*A dispute exists between the governments of Argentina and the United Kingdom of Great Britain and Northern Ireland concerning sovereignty over the Falkland Islands (Malvinas).

The background of the image is a photograph of a steep, green hillside. A narrow, light-colored path or road winds its way up the slope, starting from the bottom left and curving towards the top right. Sparse vegetation, including small trees and shrubs, is scattered across the hillside. The overall scene suggests a rural or natural setting.

Measuring progress towards sustainable forest management (SFM)

Global Forest Resources Assessment 2015

The contributions of forests to the well-being of humankind are far-reaching. Forests provide vital wood supplies and help to combat rural poverty, ensure food security and provide decent livelihoods; they offer promising mid-term green growth opportunities; and they deliver vital long-term environmental services, such as clean air and water, biodiversity, and mitigation of climate change.

Building on data that is more comprehensive and reliable than ever before, covering 234 countries and territories, the *Global Forest Resources Assessment 2015* shows encouraging signs of improved forest management and a global slowdown in deforestation. However these trend needs to be strengthened, especially in countries that are lagging behind.

This desk reference provides the data reported by countries for the *Global Forest Resources Assessment 2015*. Presented in easy-to-consult tabular form, it is a useful companion to the synthesis report as well as to the more detailed figures available on the Forest Land Use Data Explorer website.

Joint data collection, analysis and reporting on the world's forests: CFRQ partnership

There has been widespread interest in consistent forest information with common definitions and shared effort. The Collaborative Forest Resources Questionnaire (CFRQ) is an initiative developed by FAO together with regional data collection partners to jointly collect, analyse and report forest data. Linked directly to the Global Forest Resources Assessment (FRA) that FAO has conducted since 1948, the CFRQ covers 104 countries that represent some 88 percent of the world's forest. Data collected through the CFRQ were collected once and used many times, which reduces the workload for national correspondents and provides more consistent numbers. This approach increases the use of common definitions and provides a basis for enhanced sharing of forest statistics.

There are six partners working to implement the CFRQ for reporting in 2015: the Central African Forest Commission (COMIFAC/OFAC), FAO Forestry (FRA), FOREST EUROPE, the International Tropical Timber Organization (ITTO), the Montréal Process and the United Nations Economic Commission for Europe (UNECE). The CFRQ is the successful result of the joint commitment of these organizations to simplify and harmonize forest-related reporting while reducing the reporting burden that countries face in various reporting commitments. The CFRQ contains a subset of the FRA 2015 variables that are of common interest to at least two of the partner organizations.
