

BREEDS CURRENTLY RECORDED IN THE GLOBAL DATABANK FOR ANIMAL GENETIC RESOURCES

Breeds are listed alphabetically by country, dependent territory, overseas department, entity and area. Following the local breeds, regional breeds are listed followed by international breeds.

Symbols C and D after the breed name identify CRITICAL and ENDANGERED breeds, and symbols CM and DM denote the categories CRITICAL-MAINTAINED and ENDANGERED-MAINTAINED. CM and DM populations are being maintained, so are unlikely to be at the same risk of loss. The symbol X indicates an EXTINCT breed. These symbols appear whenever the population size of a country population has been reported. Entries marked with a dash (-) indicate that no population data has been received for the breed.

This list includes 7 616 breeds, of these 6 536 are local breeds, 523 regional and 557 international breeds.

Local breeds
