GEOGRAPHIC FOCUS AND PARTNERSHIPS

Scaling up the World Agriculture Watch (WAW) initiative

This map has been adapted from UN Maps [February 2019]

The Division/Office has verified that all maps contained in the work are in conformity with the UN maps, and that the Division/Office accepts all responsibility in the event of reputational damage to FAO or FAO member countries as a result of inappropriate boundaries.

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of FAO concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers and boundaries. Dashed lines on maps represent approximate border lines for which there may not yet be full agreement.

AROUND 100 regional observation sites established in 21 countries

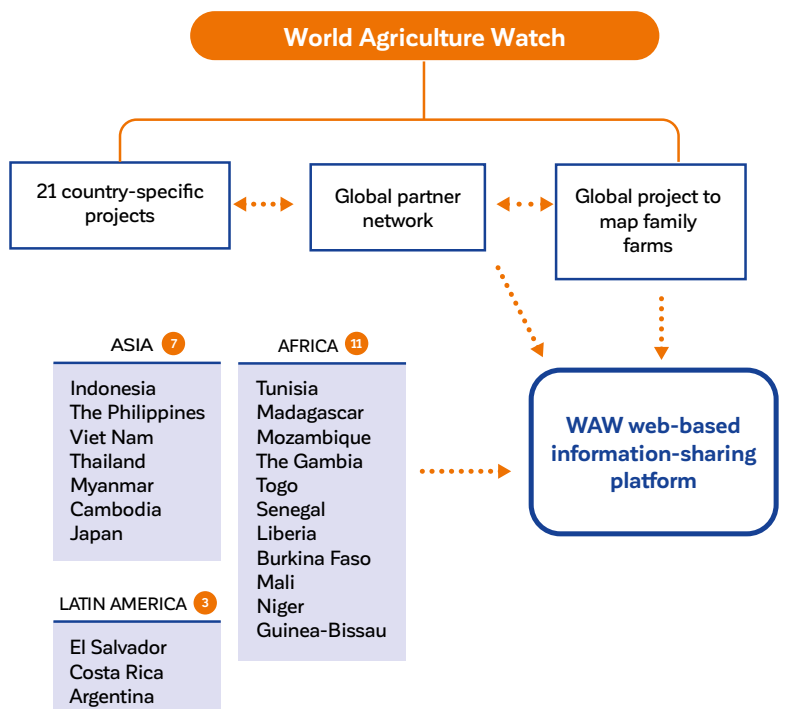

USD 2 MILLION for a baseline data set of family farms, typology and monitoring

21 COUNTRIES with enhanced capacity to develop investment strategies for family farmers

Our plan for 2019–2023

Partnerships are a key strategic asset

©Robin Hammond NOOR for FAO

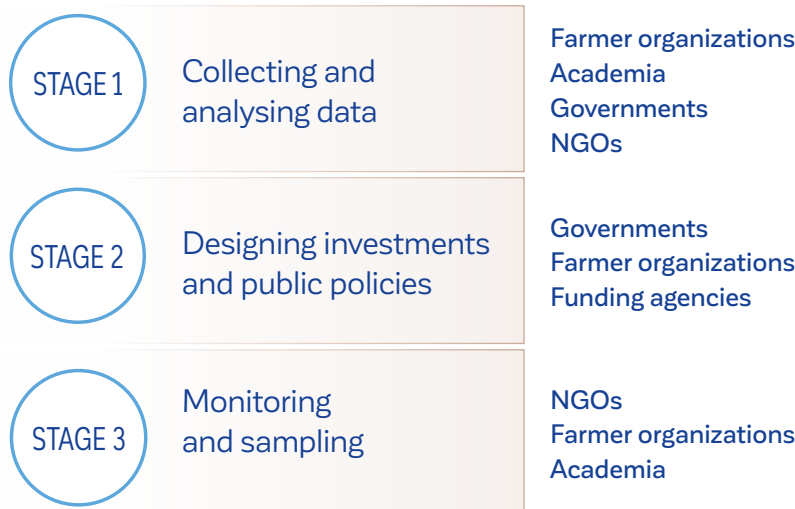

WAW also partners with rural producer organizations, national farmer platforms and regional organizations. It works with non-governmental organizations (NGOs) to strengthen the capacity of small support and cooperative groups. AgriCord, for example, is helping WAW to forge relationships with rural producer organizations.

The data collected by these partners can be used to inform governments, farmer organizations and farmers themselves, so they can improve farming practices and escape the poverty trap.

For WAW, these partnerships are a key strategic asset, made possible by the fact that its partners share a common understanding of family farming and its future. Framing this future in a more inclusive and sustainable way requires proper investment. Attracting this investment at global level requires a common framework that will provide a comparative perspective on and between countries, but which is sufficiently flexible to adapt to diverse agricultural situations around the world.

World Agriculture Watch (WAW) offers a comprehensive approach and tools to examine, analyse and monitor agricultural transformation around the world, to identify patterns and drivers of change and assess their impact. While WAW collects data on all types of farm, including industrial agriculture, it pays particularly close attention to family farms, to better tackle the constraints on their development through investment policies.
