JUST LIKE IN MOST CASES, PREVENTION IS THE BEST STRATEGY

1. USE OF ORGANIC FERTILIZERS
   - Organic matter can neutralize the soil, preventing acidification.

2. INCORPORATION OF PLANT RESIDUES
   - Adding organic matter to the soil can help neutralize acidity.

3. ADD TO YOUR SOIL
   - WOOD AS S: Works well in sandy soils.
   - LAKE CA(OH)₂: Just pour and let it sit.
   - SODIUM CARBONATE: Do not apply near plants roots.

HERE ARE SOME COMMON WAYS TO INCREASE THE pH OF YOUR SOIL

PREVENTION MEASURES
