# Global Forest Resources Assessment 2020

Desk Study

**Jersey**

Rome, 2020

FAO has been monitoring the world's forests at 5 to 10 year intervals since 1946. The Global Forest Resources Assessments (FRA) are now produced every five years in an attempt to provide a consistent approach to describing the world's forests and how they are changing. The FRA is a country-driven process and the assessments are based on reports prepared by officially nominated National Correspondents. If a report is not available, the FRA Secretariat prepares a desk study using earlier reports, existing information and/or remote sensing based analysis.

This document was generated automatically from a desk study. FAO cannot be held responsible for any use made of the information contained in this document.

## TABLE OF CONTENTS

### Introduction

1. Forest extent, characteristics and changes
2. Forest growing stock, biomass and carbon
3. Forest designation and management
4. Forest ownership and management rights
5. Forest disturbances
6. Forest policy and legislation
7. Employment, education and NWFP
8. Sustainable Development Goal 15

# Introduction

## Introductory text

**No official report has been received from Jersey. This report is the result of a desk study prepared by the FRA secretariat in Rome, which summarizes existing available information using the established format for FRA 2020 country reports.**

Bailiwick of Jersey and its islets and reefs lie in the English Channel. Jersey's highest point is Les Platons, at 136 m, on the island of Jersey. The terrain is generally low-lying on the south coast, with some rocky headlands, rising to rugged cliffs along the north coast. There are sand dunes on the west coast. Small valleys run north to south across the island. In the southeast, very large tidal variation exposes large expanses of sand and rock at low tide.

Jersey's climate is temperate, with mild winters and cool summers. Although the daily minimum temperature can fall below freezing in winter, the monthly average temperature does not.

1 Forest extent, characteristics and changes

1a Extent of forest and other wooded land

National Data

Data sources + type of data source eg NFI, etc

Expert estimates. Based on remote sensing –GIS/aerial photography.

National classification and definitions

-

Original data

Based on remote sensing –GIS/aerial photography

Analysis and processing of national data

Estimation and forecasting

-

Reclassification into FRA 2020 categories

-

FRA categories	Area (1000 ha)								
	1990	2000	2010	2015	2016	2017	2018	2019	2020
Forest (a)	0.60	0.60	0.60	0.60	0.60	0.60	0.60	0.60	0.60
Other wooded land (a)	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Other land (c-a-b)	11.40	11.40	11.40	11.40	11.40	11.40	11.40	11.40	11.40
Total land area (c)	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00

The FAOSTAT land area figure for the year 2015 is used for all reference years

Climatic domain	% of forest area 2015	Override value
Boreal	0.00	
Temperate	100.00	
Sub-tropical	0.00	
Tropical	0.00	

Comments

No change on forest trend.

## 1b Forest characteristics
