Global Forest Resources Assessment 2020

Report

Greece

Rome, 2020

FAO has been monitoring the world's forests at 5 to 10 year intervals since 1946. The Global Forest Resources Assessments (FRA) are now produced every five years in an attempt to provide a consistent approach to describing the world's forests and how they are changing. The FRA is a country-driven process and the assessments are based on reports prepared by officially nominated National Correspondents. If a report is not available, the FRA Secretariat prepares a desk study using earlier reports, existing information and/or remote sensing based analysis.

This document was generated automatically using the report made available as a contribution to the FAO Global Forest Resources Assessment 2020, and submitted to FAO as an official government document. The content and the views expressed in this report are the responsibility of the entity submitting the report to FAO. FAO cannot be held responsible for any use made of the information contained in this document.

TABLE OF CONTENTS

Introduction

1. Forest extent, characteristics and changes
2. Forest growing stock, biomass and carbon
3. Forest designation and management
4. Forest ownership and management rights
5. Forest disturbances
6. Forest policy and legislation
7. Employment, education and NWFP
8. Sustainable Development Goal 15

Introduction

Report preparation and contact persons

The present report was prepared by the following person(s)

Name	Role	Email	Tables
Georgios Panagiotou	Collaborator	g.panagiotou@prv.ypeka.gr	All
Panagiotis Balatsos	National correspondent	p.balatsos@prv.ypeka.gr	All

Introductory text

Other wooded land									

Comments

Based on FRA secretariat estimate the reported total growing stock for the year 2015 has been used for years 2016 to 2020 and since no estimate exists for plantations the average growing stock (m³/ha) for naturally regenerating forest has been used for the plantations.
