# Global Forest Resources Assessment 2020

Report

**Seychelles**

Rome, 2020

FAO has been monitoring the world's forests at 5 to 10 year intervals since 1946. The Global Forest Resources Assessments (FRA) are now produced every five years in an attempt to provide a consistent approach to describing the world's forests and how they are changing. The FRA is a country-driven process and the assessments are based on reports prepared by officially nominated National Correspondents. If a report is not available, the FRA Secretariat prepares a desk study using earlier reports, existing information and/or remote sensing based analysis.

This document was generated automatically using the report made available as a contribution to the FAO Global Forest Resources Assessment 2020, and submitted to FAO as an official government document. The content and the views expressed in this report are the responsibility of the entity submitting the report to FAO. FAO cannot be held responsible for any use made of the information contained in this document.

## TABLE OF CONTENTS

### Introduction

1. Forest extent, characteristics and changes
2. Forest growing stock, biomass and carbon
3. Forest designation and management
4. Forest ownership and management rights
5. Forest disturbances
6. Forest policy and legislation
7. Employment, education and NWFP
8. Sustainable Development Goal 15

# Introduction

## Report preparation and contact persons

The present report was prepared by the following person(s)

Name	Role	Email	Tables
John Quilindo	National correspondent	jquilindo@gov.sc	All

## Introductory text

Place an introductory text on the content of this report

# 1 Forest extent, characteristics and changes

## 1a Extent of forest and other wooded land

### National data

#### Data sources

1992	References	INDUFOR Oy, (1993). Seychelles Forest Management Plan/ Sector Study. Department of Environment
	Methods used	Other (specify in comments)
	Additional comments	Study based on aerial photo and field checking

#### Classifications and definitions

1992	National class	Definition
	Albizia dominant forests	Mixture of various species, but dominated by Albizia falcataria. Can be found mostly in riverine forests in valleys
	Mixed forests	Mixture of endemic and exotic species with a height predominantly over 10m.
	Plantation forests	Forests established by planting for commercial or protective purposes
	Coconut dominant forest	Natural forests mixed with coconut trees. Normally on lower elevations and close to agricultural lands.
	Bush vegetation	Mixture of cinnamon, prune de France and various tree species, generally lower than 10m.
	Deforested areas	Eroded and burnt areas.
	Cultivated or built up areas	Areas under housing, agriculture or other non – forest uses.

#### Original data and reclassification

1992	Classifications and definitions		FRA classes		
	Class	Area (1000 ha)	Forest	Other wooded land	Other land
	Albizia dominant forests	1.40	100.00 %	%	%
	Mixed forests	24.50	100.00 %	%	%

	Plantation forests	4.90	100.00 %	%	%
	Coconut dominant forest	2.90	100.00 %	%	%
	Bush vegetation	6.90	0.00 %	80.00 %	20.00 %
	Deforested areas	0.34	0.00 %	0.00 %	100.00 %
	Cultivated or built up areas	4.00	0.00 %	0.00 %	100.00 %
	Total	44.94	33.70	5.52	5.72

FRA categories	Area (1000 ha)								
	1990	2000	2010	2015	2016	2017	2018	2019	2020
Forest (a)	33.70	33.70	33.70	33.70	33.70	33.70	33.70	33.70	33.70
Other wooded land (a)	5.52	5.52	5.52	5.52	5.52	5.52	5.52	5.52	5.52
Other land (c-a-b)	6.78	6.78	6.78	6.78	6.78	6.78	6.78	6.78	6.78
Total land area (c)	46.00	46.00	46.00	46.00	46.00	46.00	46.00	46.00	46.00

The FAOSTAT land area figure for the year 2015 is used for all reference years

Climatic domain	% of forest area 2015	Override value
Boreal	0.00	
Temperate	0.00	
Sub-tropical	0.00	
Tropical	100.00	

Comments

The forest area reported in FRA 2015 was slightly different due to different reclassification applied. For FRA 2020 reclassification has been corrected.

# 1b Forest characteristics

## National data

### Data sources
