Background

As the custodian organization for 21 SDG indicators and a contributing agency to another five indicators, one of the Organization’s top priorities is to improve the capacity of Member countries to measure the Sustainable Development Goals (SDGs) and monitor the 2030 Agenda for Sustainable Development.

With now less than seven years left until 2030, measuring the SDG indicators under FAO custodianship not only consists in measuring countries’ progress in the achievement of the SDGs and preparing credible voluntary national reviews, but it is also key to support evidence-based decision-making for sustainable investments and the needed transformation of the food and agricultural sector. Measuring SDG indicators is also essential to raise awareness on the challenges faced in the food and agriculture sector and inform flagship publications, including the “State of the World” collection.

Finally, it is vital to monitor progress in the implementation of regional and international agendas, including the Malabo Declaration, the Post-2020 Global Biodiversity Framework and Agenda 2063.

Table 1 summarizes how each SDG indicator supports decision-making, FAO knowledge products and additional monitoring frameworks.

Recent reporting rates corroborate the enormous need for capacity development at national level to ensure that most countries can produce and report on most SDG indicators by 2030. While challenges vary from one country to another, recent analyses highlight the main obstacles to achieving the SDGs:

1) Non-alignment of national/regional indicators with the Global Indicator Framework
2) Low/inefficient investments in SDG data production and use, both from national governments and custodian agencies
3) Lack of proper SDG coordination at country level, particularly across government organizations/ministries
4) Capacity gaps to collect, compile, report and use SDG indicators
5) Insufficient coordination on SDG data in the UN system across agencies (e.g. in planning and supporting integrated data collection and capacity development activities)
6) Financial resource constraints at country level
7) Persistent confusion among countries between the politics and statistics of the 2030 Agenda
8) Insufficient investment funds from the custodian agencies dedicated to monitoring, follow-up and support projects in support to SDG monitoring
9) Uncertain criteria for the applicability of SDG indicators in countries leading to low adoption or cherry picking of indicators.

To facilitate targeted interventions, country profiles based on the findings of FAO 2018–2019 Statistical Capacity Assessment Survey for SDG Indicators were produced. They showed that more than 80 percent of countries would require some form of assistance in order to produce the SDG indicators under FAO custodianship.

In order to overcome these challenges, FAO is committed to scaling up support to countries to ensure that high quality and comparable data for the SDGs are produced and used in support to decision-making and SDG national, regional and global monitoring. The Organization has developed regional roadmaps to ensure that this support is embedded in FAO’s cooperation framework and activities at country level.
One element of this roadmap is to better communicate to national counterparts the resources available to them, to improve their capacity to monitor the SDGs. The following document, prepared by FAO’s Office of the Chief Statistician, contains a wealth of relevant information which can support countries in producing, analyzing and using SDG indicators, as well as understanding how they can receive support from FAO to this end.
### Table 1: SDG indicators under FAO custodianship: Use in development agendas, policies, monitoring frameworks and FAO flagship publications

Inventory of all FAO resources available for supporting SDG monitoring

1. Websites and key online resources

**FAO SDG Indicators portal**
The portal provides access to all available data (e.g. SDG database, microdata files...) on the SDG Indicators under FAO custodianship at the global, regional and country levels, a variety of interactive data visualization tools, metadata and other methodological documentation and relevant capacity development initiatives, e-learning courses, newsletters, recent publications and events. Available in Arabic, Chinese, English, French, Russian and Spanish.

**SDG indicators domain in FAOSTAT**
FAOSTAT’s domain complements the global SDG database administered by the United Nations Statistical Division, as well as FAO’s SDG indicators portal, by providing access to the available data for each of the 21 indicators under FAO custodianship. It offers interactive data visualizations, advanced data filtering, data comparability, country profiles, and provides an entry point to the methodological documents and focal points for each indicator.

**FAO Country Profiles (internal resource)**
The SDG performance country profiles highlight the current data availability of SDG indicators and capacity development needs. The tool is aimed to help colleagues in decentralized offices gain easy access to key data, indicators and data visualizations at the national level from different FAO domains. The country profile tool includes three modules on food security and nutrition indicators, basic statistics of agriculture, and SDG indicators.

**FAO’s Statistical Capacity Assessment**
FAO conducted a Statistical Capacity Assessment in early 2019 to provide overall insight on the strengths and weaknesses of member countries’ national statistical systems’ capacity for monitoring and reporting on the 21 SDG indicators under FAO custodianship. The results for each country are available in English, French and Spanish on the FAO SDG Indicators Portal.
Inventory of FAO statistical capacity development programmes and services
Specially designed to assist decentralized offices in planning, elaborating Country Programming Frameworks (CPFs) and engaging with national stakeholders and the UN country team, this webpage provides detailed information about what FAO offers in terms of technical assistance and capacity building activities, and the different ways to request assistance.

Calendar of FAO data collection
This webpage provides a new interface to consult the calendar of FAO data collections, the questionnaires to be dispatched and their respective focal point in the Organization. It covers a wide range of statistical domains: land use, government expenditures, disasters, agriculture, forestry, fishery and aquaculture, and natural resources.

Agenda 2030 and the SDGs at the global level
- Sustainable Development Knowledge Platform
- Transforming Our World: The 2030 Agenda for Sustainable Development
- Global indicator framework for the Sustainable Development Goals and targets of the 2030 Agenda for Sustainable Development
- The Sustainable Development Goals Reports (since 2016)
2. FAO publications

SDG progress report “Tracking progress on food and agriculture-related SDG indicators”

Published annually, “Tracking progress on food and agriculture-related SDG indicators” offers analysis and trends on SDG indicators related to FAO mandate, highlighting areas of progress and areas where further effort is needed. The report is available in a digital format in the six official languages of FAO.

Factsheets on the 21 SDG indicators under FAO custodianship: A highlight of the main indicators with the greatest gaps in country reporting (2020)

For each of the 21 SDG indicators under FAO custodianship, a concise factsheet provides the latest information on data availability and country coverage; the methodology for compiling the indicator and the process followed for establishing it as an international standard; a description of data sources and the main constraints faced by countries in reporting the indicators; and a list of the main tools, resources and initiatives developed by FAO for providing technical support to countries. The report is available in English.

Guidelines on data disaggregation for SDG Indicators using survey data (2021)

As a member of the working group on data disaggregation, FAO has taken numerous steps towards supporting Member Countries in the production of disaggregated estimates. Within this framework, these Guidelines offer methodological and practical guidance for the production of direct and indirect disaggregated estimates of SDG indicators having surveys as their main or preferred data source. Furthermore, the publication provides tools to assess the accuracy of these estimates and presents strategies for the improvement of output quality, including Small Area Estimation methods. The report is available in English. It is complemented by a number of technical reports and case studies that can be accessed here.
3. Articles

- **The FAO contribution to monitoring SDGs for food and agriculture**, Nature Plants (2019).
- **Are We Serious About Achieving the SDGs? A Statistician’s Perspective**, IISD (2020).

- **Integrating Surveys with Geospatial Data through Small Area Estimation to Disaggregate SDG Indicators: A Practical Application on SDG Indicator 2.3.1**, IOS Press (2022).

**Access the full list on the SDG-indicators website.**
4. **E-learning courses**

A series of free multilingual *e-learning courses* to foster country adoption of best practices in data collection, analysis, and reporting of 21 SDG indicators. The current availability of these courses in the different UN languages is summarized in the table below, with new courses currently under development (UD) distinguished from courses to be developed (TBD) in the future contingent on the availability of new funds.

E-learners that complete the course and pass the final evaluation exam are granted a digital certification from the FAO e-learning Centre. This digital badge certification confirms that the e-learners have achieved the learning outcomes and competencies outlined in FAO e-learning courses.
