# AFRICAN COMMISSION ON AGRICULTURAL STATISTICS

## Twenty-seventh Session

15 – 18 November 2021, Virtual Host – Dakar, Senegal

Agenda item 8: The Djibouti Experience

ADAN ARBAHIM  
Fisheries Officer

Department of Fisheries of the Ministry of Agriculture,  
Fisheries, Livestock, Water and Fishery Resources

# **OUTLINE**

## **GENERAL INFORMATION ON THE SECTOR**

- **Developments in the fisheries sector**
- **Regulatory framework**
- **Trends in the fisheries sector statistics**

## **PRAREV project**

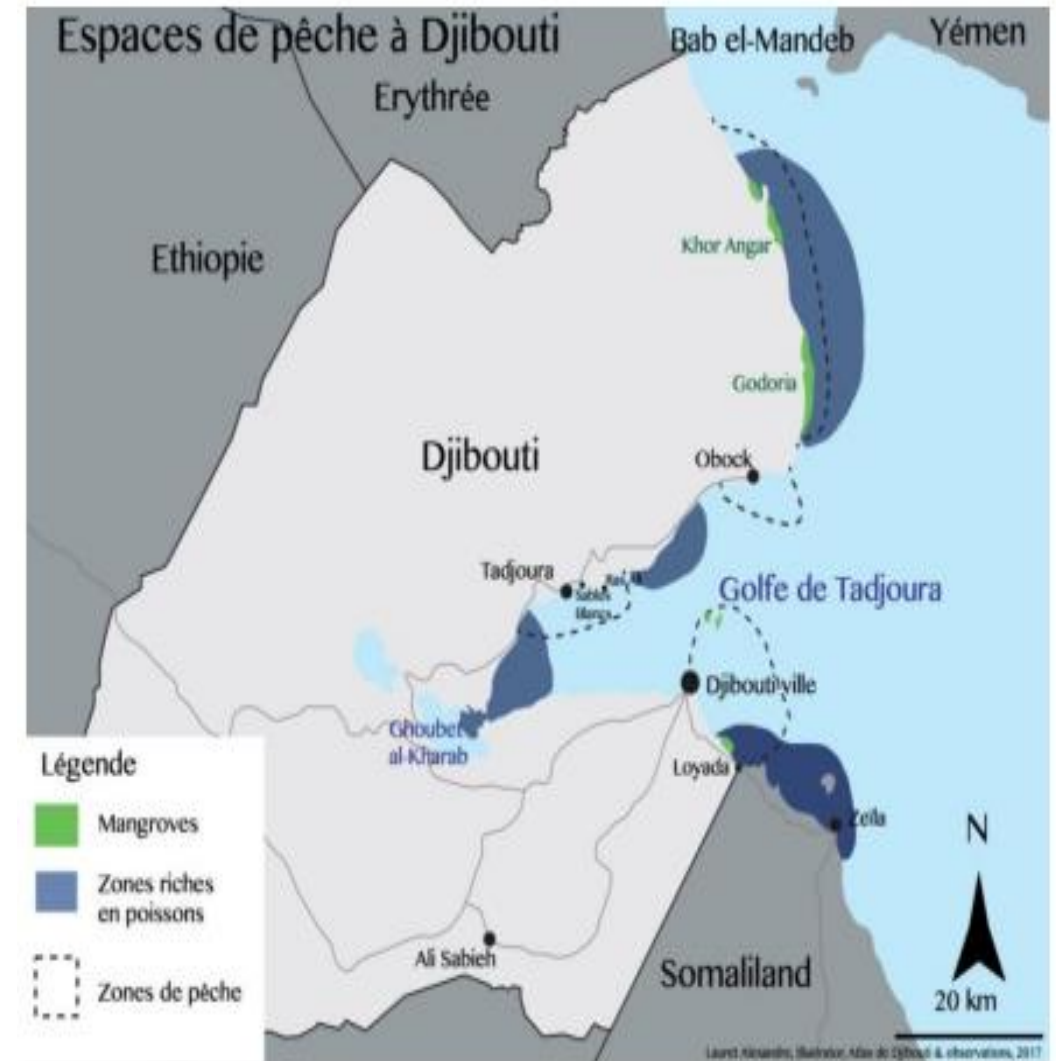

- **Setting up of a data collection system**
- **Data transmission steps from a tablet to the Open artfish database**

## **COMPARISON BETWEEN THE NEW AND OLD DATA COLLECTION SYSTEMS**

- **Data analysis with Open ARTFISH**
- **Recommendations**

## GENERAL INFORMATION ON THE SECTOR

- A 372 km coastline,
- The Republic of Djibouti has a **47,000 tonnes/year** fishing potential;
- It is estimated that about **9,300 tonnes** of high value-added fish can be exported **each year**;
- A general seasonal pattern of catches due to prevailing wind patterns;
- Under-exploitation of the fish stock resulting in low landed volumes;
- Djibouti's fishing sector provides direct or indirect employment for between 3,000 and 3,500 people, and a number of professional fishermen estimated at around 600;
- A fishery with an important social dimension.

# Developments in the fisheries sector

**Independence  
of Djibouti  
1977**

**Assessment of Fishery  
Resources  
1994**

**Enactment of the  
Fishery Regulations  
2002**

**Fisheries and  
aquaculture policy  
2014**

**2001  
Creation of the Fisheries  
Department**

**2004  
Fisheries Master Plan**

## Legal framework

The legal framework for fisheries, which implements the Fisheries Regulation is based on the precautionary principle and provides that:

- fishing in Djiboutian waters is **reserved for vessels registered in Djibouti (national fleet) and for Djiboutian nationals;**
- only artisanal fishing is allowed in Djibouti waters;
- trawling in Djibouti waters is prohibited except for research purposes.

Fishing in Djibouti waters is **prohibited for foreign vessels, while industrial fishing is also prohibited.**

The Fisheries Code also defines artisanal fishing as commercial fishing carried out on foot or on vessels without refrigeration equipment.

- a) Improved artisanal fishing with vessels of over 9 metres;**
- b) Artisanal fishing with boats of less than or up to 9 metres;**

## PRAREV PROJECT

The FAO technical support is part of the Programme to Reduce Vulnerability in Coastal Fishing Areas (PRAREV).

The specific objectives of this programme include:

- i) a better appropriation by the coastal population of activities more resilient to climate change;
- ii) a large part of the target groups affected by climate change benefit from the strengthening of cooperatives and associations;
- iii) an increase in income for programme beneficiaries;
- iv) an increase in fish landings without affecting the state of the resource.**

One of the expected outcomes, namely the development and implementation of a monitoring and evaluation system for fisheries resources, is assigned to the FAO in line with the UTF/DJI/033/DJI.

The implementation of such a statistical system involved several successive steps:

1. a **framework survey** to determine the socio-economic structure of the sector's means of production, as well as the operating models.
  2. The analysis of data under this framework survey allows the definition of a **sampling plan** for the monitoring of the fishing activity, aiming in particular at estimating the catches and fishing effort.
  3. **Regular monitoring of catches and effort** are then instituted with investigators operating at the landing sites according to the sampling plan.
- 21 July to 2 August 2019: The mission concluded interventions held under the same project for the development and implementation of a statistical monitoring system.
  - Landing sites were visited and a training workshop on biostatistics and sampling methods was held for Fishery Division and Coast Guard agents, enumerators and PRAREV agents.

- 11 - 14 January 2021 - Training workshop to monitor implementation of the fisheries statistics system.
- Meeting with the data collectors to ensure proper operation of the landings sampling system and use of the tablets;
- Preparation of statistical data on catches, effort and catch per fishing unit;
- Organisation of statistical fishing data by landing site, month, and fishing unit.

## OPEN ARTFISH AND THE OLD DATA COLLECTION METHOD COMPARED

- Data collection on collection sheets prepared by the manager;
- Difficulty in reading the forms returned to the department by the interviewers;
- Difficulty of sending the forms in time by the regional investigators (Tadjourah, Obock and Arta);
- Slow manual data entry from the forms and risk of errors and delays in the generation of statistics;
- The collection system and the form covered only 10 species

### Old data collection method

- Data collection on electrical media (tablets, phones). Paper saving and automatic transmission;
- Easy identification of the different species by the investigators (photos of the different species included in the electronic form);
- 45 species are monitored and recorded on the form.
- Time saving, immediate sending of data via internet by the interviewers from the various collection sites and reduction of the statistics generation cycle;
- Generation of more reliable statistics with a stratified sampling system.

## Recommendations at the end of the project

- Improvement in data generated annually by Open ARTFISH (taking into account quantities in kilogrammes and not in tonnes);
- Take into account countries that have a small catch volumes;
- Continuous capacity building to improve the database;
- Inter-African capacity building and sharing of experience in stock assessment using the indirect method.

Thanks for your  
attention
