Sustainable Fish Value Chains for
Small Island Developing States

SVC4SIDIS

Boosting fisheries value chains in Small Island Developing States

Sustainable Fish Value Chains for Small Island Developing States (SVC4SIDIS) is a five-year project funded by the Ministry of Oceans and Fisheries of the Republic of Korea.

The SVC4SIDIS project is working closely with stakeholders to develop sustainable fishery value chains and to identify inefficiencies and opportunities pertaining to social, economic and environmental dimensions through a multilevel, highly participatory strategy in selected countries.

Our objectives

The project aims to strengthen the value chains of high-value species in SIDS, leading to greater social and economic benefits while ensuring sustainable production and trade in fish and fish products.

Develop stakeholders' understanding of the selected value chains and enact specific improvement strategies

Enhance the economic performance of micro, small and medium enterprises (MSMEs)

Safeguard the marine environment through sustainable fisheries management and climate change adaptation

Provide blueprints for investment opportunities in MSMEs by building their capacity for long-term economic sustainability

Our approach

SVC4SIDS focuses on value chain analysis and value chain design within the local context of the countries by adapting the framework of the Guiding Principles on Sustainable Food Value Chain.

Value chain analysis

Value chain design

Identification and selection of value chains

Functional analysis

Sustainability assessment

Upgrading strategy

Implementation plan

Value chain mapping

End markets analysis

Analysis of the value chain elements

Governance analysis

Economic analysis

social analysis

Environmental analysis

Analysis of strengths, weaknesses, opportunities and threats

Vision, upgrading, strategy and theory of change

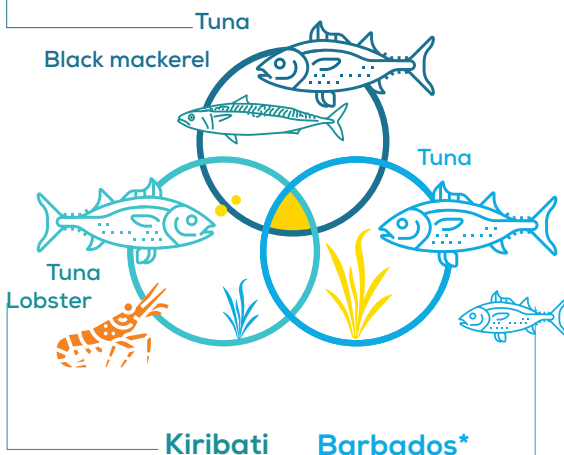

Upgrading action plans

Our work

Cabo verde

Tuna and black mackerel have long been a cornerstone of the country's fisheries. Their value chains contribute immensely to the socioeconomic well-being of Cabo Verdeans.

Fisheries are of fundamental importance for the economy and food security of Kiribati. The tuna value chain focuses on the domestic market, while the lobster value chain is focused on exports.

The tuna fishery in Barbados harvests a large percentage of high-grade tuna. The enhanced value chain will increase the benefits from the tuna trade.

*Barbados was supported by SVC4SIDS over the period 2020-2021.
