

# EUROPEAN PRICE REPORT

## Latest trends

After the Christmas rush, the European fish market came to a standstill in January 2024, which is a normal feature for this time of the year. Demand is slow, and prices have declined from the high levels reached in December 2023.

The recent tense developments in the Red Sea are likely to have a strong impact on fish trade in the world market; significant increases in price levels are expected, after the normalization that had characterized the second half of last year.

In December 2023, the inflation rate in the Euro area, which had been decreasing since the mid of 2023, increased to 3.4 percent from 2.4 percent in November and 2.9 percent in October. In this European Fish Price Report, 61 percent of the prices are perceived as stable compared with December 2023, with some rises noted for 23 percent of seafood products and declines for 16 percent. It was the first time in one year that more prices were raising than going down, which showed that inflation is up also for seafood products.

The export value of Norwegian seafood reached an all-time high in 2023, worth NOK 172 billion. This equates to 39 million seafood meals being served every day, throughout the year. In fact, 2023 was the best value year ever for Norwegian seafood exports, recording a rise of NK 20.7 billion (+14 percent) over 2022. Seafood is still one of Norway's most sought-after global trade goods and has firmly established itself as the country's second-largest export product, behind oil and gas.

January 2024

## Index for prices

Groundfish	9
Flatfish	11
Tuna	13
Small Pelagics	13
Cephalopods	15
Crustaceans	16
Bivalves	16
Salmon	19
Trout	19
Freshwater fish	19
Non-Traditional Species	19
Seabass-Seabream-Meagre	21

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

## GROUNDFISH

There is a shortage of cod products from both the *Gadus macrocephalus* and *Gadus morhua* species. The previously anticipated cold temperatures in southern Europe are being materialised and consumption of cured cod has increased. This good demand, combined with the low fishing at the moment, is expected to lead to higher prices for cured cod in the European market. In contrast, ling, which is an accepted alternative to cod in the preparation of cured cod-type products, is being sold at EUR 0.50 per kg lower prices.

The French market also reports strong demand for cod, while arrivals are slow. The wholesale price in Paris increased by EUR 0.50 per kg between December 2023 and January 2024.

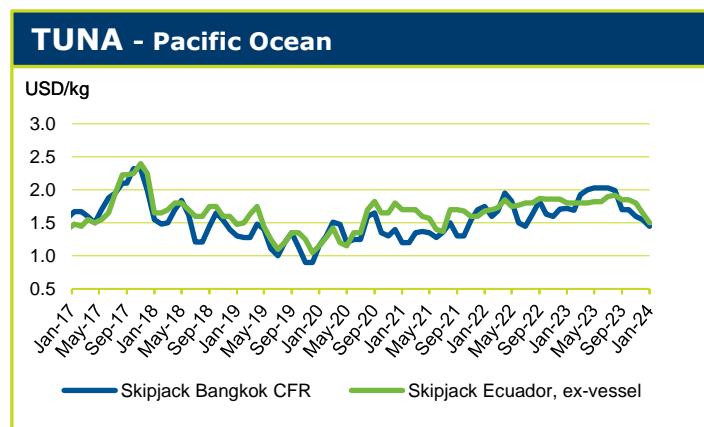

Demand in the European and Asian markets for Yemeni demersal fishery products (snapper, grouper) is reportedly average, while a good market situation is reported in the African markets. Supplies of products are fair, with prices at generally high levels. The ongoing tension in the Red Sea is causing delays in shipments.

Hake prices continue to decline. In the Italian market, some EUR 0.60 per kg price discounts were reported between December 2023 and January 2024. This continues a trend which started in mid-2023.

Supplies of cod is anticipated to be significantly reduced in 2024, while Alaska pollock supplies will likely increase slightly. This will cause cod prices to rise even further, while Alaska pollock prices are expected to soften. Surimi production is forecast to go up, and producers in Asia are worried about price developments.

## TUNA - BILLFISHES

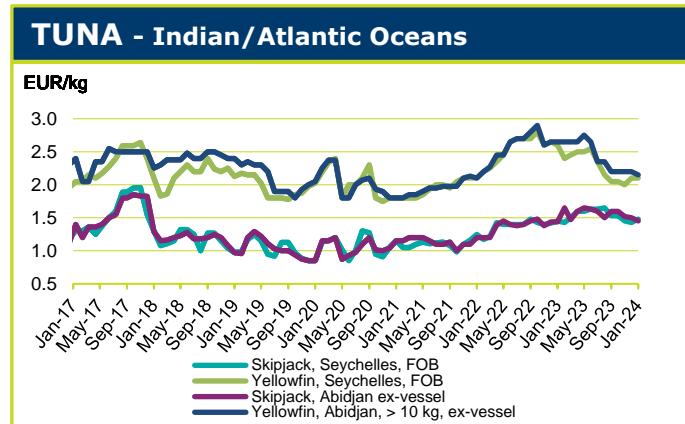

Fishing in the Western and Central Pacific Ocean is good and Bangkok Port remains congested. This congestion, together with the resultant extended unloading period, is delaying carriers from going back to fishing grounds and resulting in a shortage of carrier space. Due to the on-going good fishing, skipjack prices have fallen.

## TUNA – BILLFISHES (cont.)

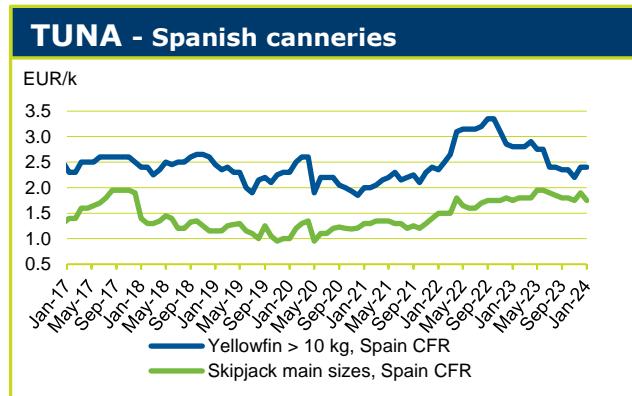

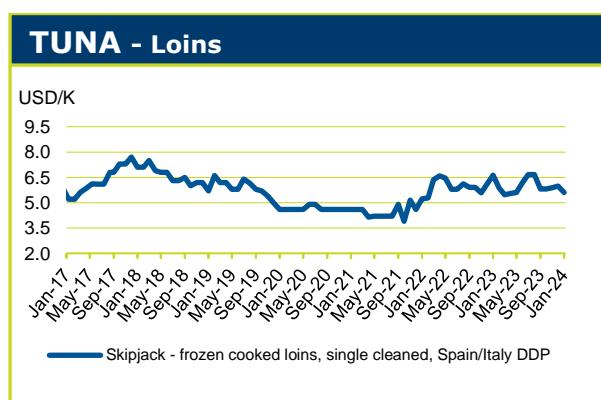

In the Indian Ocean, fishing has improved to moderate levels and the bulk of the catches comprise skipjack caught on Fish Aggregation Devices (FADs). Despite the bigger catches, skipjack prices have rebound due to increased demand. On the contrary, yellowfin prices have remained stable.

The International Commission for the Conservation of Atlantic Tunas (ICCAT) FAD closure in the Atlantic Ocean began on 1 January 2024, and will last for 72 days. Despite this, fishing has improved to the moderate-to-good level; consequently, skipjack and yellowfin prices have decreased.

Meanwhile, the second Inter-American Tropical Tuna Commission (IATTC) 'veda' of 72 days was in force in the Eastern Pacific Ocean (EPO) until 19 January 2024. Fishing effort is down to about 20-25 percent but for those vessels catching, fishing is reported to be good. The cost of skipjack continues to fall sharply due to ample supplies from the EPO and Peruvian waters, combined with the falling market prices in Thailand. Yellowfin prices remain stable.

European market prices for skipjack fell due to reduced demand during the December 2023 holiday season. Yellowfin prices remain stable. The price for cooked, single-cleaned skipjack loins has fallen sharply due to the influx of duty-free quota loins at the start of the year.

## CEPHALOPODS

Demand for cephalopods is bleak in Spain, which has created a downward pressure on squid prices. In general, these prices have gone down by EUR 0.10 per kg compared with prices of December 2023. Octopus prices too, are going down, by as much as EUR 0.50 per kg.

Catches of squid in South Africa are poor, and although inventories are also almost empty, prices are still trending downward. The peak season for Indonesian octopus continued in early 2024. Unfortunately, after the sharp increase in demand during the December 2023 period, sales are bleak at the moment. Octopus prices in Europe are expected to go down, as demand is likely to stay limited until late March 2024.

### SQUID - in Italy, origin: South Africa

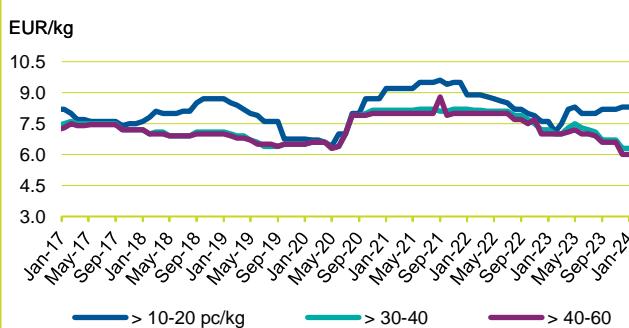

## CRUSTACEANS

Vannamei shrimp continues to be over-supplied in the European market. Demand remains low and is not expected to improve in the coming months. Ecuadorian shrimp on offer in the European market experienced declines of EUR 0.50-1.00 per kg in January 2024, compared with the previous month.

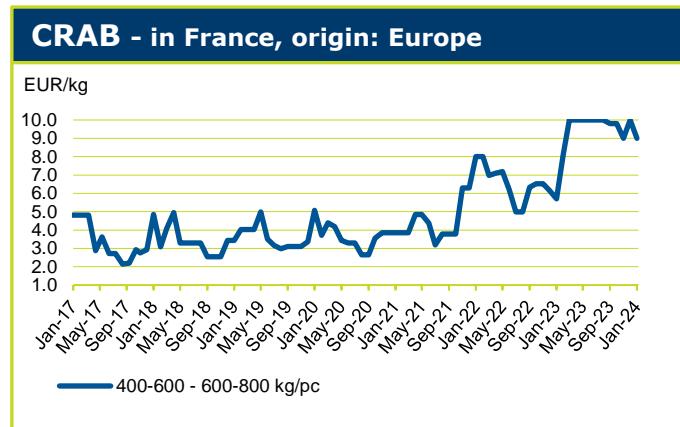

After declining during the whole of last year due to oversupply and difficult global economic circumstances, prices have finally stabilized for shrimp products from Indonesia. While there is some recovery in the economic climate, the US market (the biggest for Indonesian shrimp) has not seen a significant improvement. While small-sized shrimp are met with strong demand, the prices for big sizes are quite stagnant.

### ARGENTINA RED SHRIMP - origin:

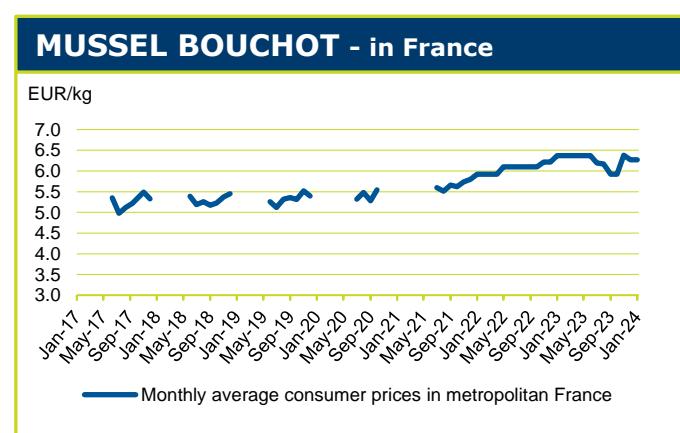

## CRUSTACEANS (cont.)

In view of the Lunar New Year in February 2024, China is aggressively buying shrimp from all suppliers. At the same time, the difficult political situation in Ecuador is likely to impact negatively on shrimp supply from this country in the near future. Similar to Indonesian shrimp, stable prices were reported for Argentinean shrimp in January 2024.

## BIVALVES

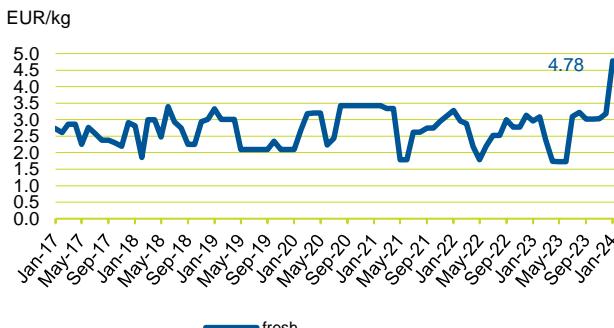

Companies operating in the retail market report difficulty finding fresh Italian bivalves to meet consumer demand. Producers are selling the raw material to foreign markets, especially France and Portugal, and for this reason the prices of shellfish have skyrocketed. According to rumours, it would not only be due to the Atlantic blue crab feasting on young bivalves, there is talk among traders of a deliberate delay in sowing by clam farmers. Whatever the cause, it appears certain that there will be insufficient availability of clams compared to demand.

## SMALL PELAGICS

Norwegian exports of frozen mackerel reached NOK 6.7 billion in 2023, an increase of seven percent as compared to 2022. Mackerel is the third major Norwegian seafood export item, behind salmon and cod.

### Mackerel - in Italy, origin: France

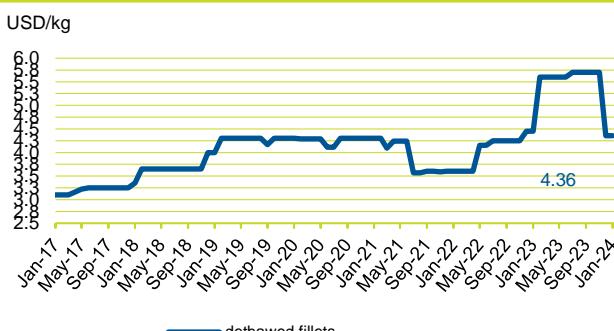

## FRESHWATER

According to data from Viet Nam Customs, the EU market imported more than USD 134 million of pangasius from Vietnam in the first ten months of 2023, down 19 percent compared to the same period in 2022.

However, after many months of decline, in September 2023, Vietnamese pangasius exports

### Pangasius - in Italy, origin: Viet Nam

to the European Union recorded positive growth again; export value was more than USD 14 million, an increase of 11 percent over the same period in 2022.

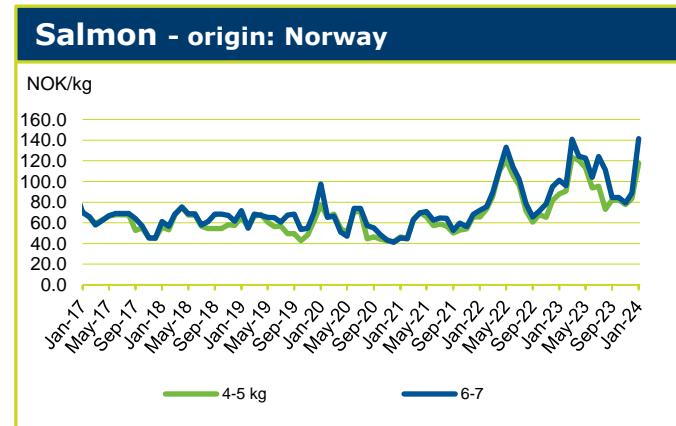

## SALMON

The Norwegian Seafood Council (NSC) announced that 1.2 million tonnes of salmon were exported in 2023, valued at a record-high NOK 122.5 billion. Although there was a decline of two percent in terms of volume, the value of the exports in 2023 had increased by NOK 16.9 billion, up 16 percent compared to 2022, which was the previous record year. This achievement is in line with the record-high values also reached for all Norwegian seafood exported last year.

## SALMON (cont.)

The NSC explained that the main contributors to the impressive export performance was due to the devaluation of the Norwegian krone and the general price increase in the main markets when measured in NOK; however, the growth in EUR and USD was significantly less.

The three most important markets for Norwegian salmon in 2023 were Poland, France, and the United States of America. The NSC noted several positive trends in home consumption in Europe, which impacts on the processing of finished products in Poland. In addition, in 2023, there was an increase in exports from Poland to countries outside the EU, including to the US market.

Norwegian salmon prices began to rise strongly during the first week of 2024, after two weeks of limited harvests (weeks 51 and 52 of 2023). According to Undercurrent News, the prices of salmon were EUR 10.45 per kg for 3-4 kg salmon; EUR 10.65 per kg for 4-5 kg salmon; and EUR 11.35 per kg for superior-grade head-on, gutted salmon, which represented increases of 18.75 percent, 19.65 percent and 26 percent, respectively compared to the previous week. However, with regard to Scottish salmon, the website indicated that supply remains poor. A UK processor who purchased 3-6 kg salmon noted that Scottish spot prices skyrocketed from GBP 7.90-8.00 per kg in week 52 of 2023 to GBP 8.80 per kg by the first week of 2024.

## TROUT

The Norwegian Seafood Council (NSC) classified 2023 as a good year for trout, considering that Norway had exported 56 900 tonnes worth NOK 5.5 billion which represented increases of four percent in volume and ten percent in value compared to the previous year. In addition, the NSC said that a record-high export value for trout was reached, NOK 485 million more than the previous record year, which was in 2022.

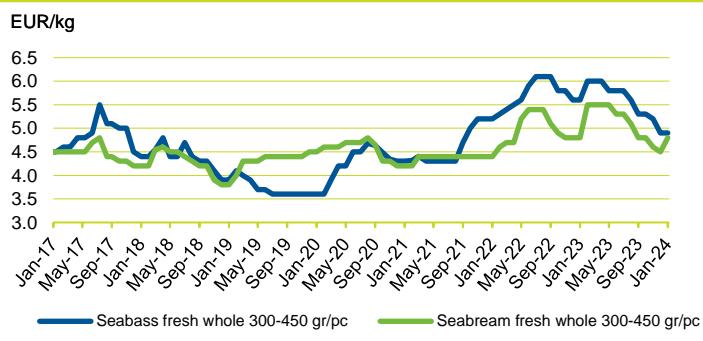

## TROUT (cont.)

The largest markets for the species during the year were the United States of America, Ukraine and Thailand. In particular, Ukraine registered the biggest value increase in 2023 (up NOK 284 million or +92 percent) while in terms of volume, the 8 000 tonnes imported into the country reflected a growth of 76 percent compared to 2022 and almost the same as 2021, previous to the conflict.

## SEABREAM/SEABASS

While trade was sluggish in the early part of the year and during the summer months, the most recent available data points to modest gains from August to October. Overall trade during this period rose to 86 000 tonnes, an increase of approximately 10 percent on the same period last year. Greece remained the largest exporter by volume, although most of the increase seen during this period was fuelled by increased supply from Türkiye, the largest producer, with trade in seabass especially increasing. Italy, the largest market for both seabass and seabream, saw imports of 18 400 tonnes, a 12 percent increase on the same period last year.

### SEABASS/SEABREAM - in Italy origin: Greece

The decline in seabass prices witnessed towards the end of 2023 was arrested, with prices remaining largely stable between December and January. Having remained depressed since the summer, seabream prices saw some recovery in January, rising by close to 20 percent to EUR 5.50 per kg in mid-January. The price gap between Turkish farmed fish and others remains significant and has contributed greatly to its continued and increasing popularity in European markets. The below table lists wholesale prices in Milan in early January, outlining the price levels of various origins of fish.
