

What to expect in summer 2011 (with regular updates)

- ✓ potential for slightly above-average early rains in June
- ✓ mainly normal rainfall throughout the summer
- ✓ above-average rains may develop in Niger and Chad at end of summer
- ✓ initial locust populations will be higher than normal in Mauritania
- ✓ threat of locust groups appearing at beginning of rains in Yemen and Sudan
- ✓ current insecurity will limit survey and control operations
- ✓ situation update at mid-month when latest seasonal rain prediction is issued
