REPORT ON THE FAO SURVEY OF PULP AND PAPER CAPACITIES 1996-2001

by the Secretariat

The annual FAO Surveys of World Pulp and Paper Capacities are based on figures received early in the year of publication from correspondents in many countries of the world, and on Secretariat estimates for the remaining countries. In most instances, the data are provided by national pulp and paper trade associations. The information on their future development plans is obtained from companies, on average about six months before the data are reported to FAO. Accordingly, the results reflect industry opinion and expectations in the middle of the first year reported on. Subsequent changes in economic, financial and market conditions may, in the meantime, have led to changes in their plans and expectations. For this 1996-2001 Survey, new estimates have been received in time for inclusion for 36 countries. For the remaining countries, the estimates of the 1995-2000 Survey have been repeated, and 2001 has been made equal to 2000.

The coverage and content of the Survey is as for last year. The data have been stored and processed by computers, and a computer questionnaire was used in the enquiry. The following features of presentation are noted:

- (i) Country tables for pulp and paper are presented on one page.
- (ii) Regional tables include all the detail of the country tables. In addition, these tables show for each product aggregate, the volume for which further detailed breakdown to component products is not available. This indicates immediately the extent of coverage of the detail provided on the breakdown.
- (iii) Product tables show volume of production capacity by country, for each product and product aggregate code. They are included in the order of the code numbers.

The countries for which data were received in time for inclusion in the updating were Australia, Austria, Bolivia, Brazil, Canada, Chile, Colombia, Czech Republic, Denmark, Dominican Republic, El Salvador, Finland, France, Germany, Hungary, Italy, Jamaica, Japan, Korea Rep. of, Malaysia, Mexico, Morocco, Myanmar, Netherlands, New Zealand, Norway, Pakistan, Portugal, Russian Federation, South Africa, Spain, Sweden, Switzerland, Thailand, United Kingdom and the United States of America. These 36 countries account for 85 percent of world capacity. Returns from developing countries covered 35 percent of their total production capacity. Note in this edition the data on China excludes capacity of the Province of Taiwan. Data under the former USSR is for the Russian Federation only.

The national correspondents, that returned the FAO questionnaires in time for publishing the "Pulp and Paper Capacity Survey 1996-2001" are listed in Annex 1. This publication is possible because of their support. Their willingness to share and exchange data is greatly appreciated. For inquiries on these data please contact the national correspondents or FAO Forestry Department, Planning and Statistics Branch, Via delle Terme di Caracalla, 00100 Rome, Italy. SUMMARY

The main findings of the 1996-2001 Survey are as follows:

Trends (Table 1 and Table 2)

During the period 1996-2001, industrial capacity is projected to increase at an annual rate of 1.5 percent for Wood Pulp and 1.8 percent for Paper and Paperboard. Both these growth rates are lower than those foreseen in the 1995-2000 survey. Total world capacity for Wood Pulp in 2001 is predicted to be 197 million mt, that for Paper and Paperboard 344 million mt.

Out of the total of 197 million mt of projected wood pulp capacity in the year 2001, the developed countries (which includes the former USSR and countries of Central and Eastern Europe in transition to market economy) will account for 85 percent, the developing for the remainder; in 1996 the corresponding share was 88 percent. Out of the 344 million mt projected capacity for paper and paperboard, the developed countries will account for 77 percent while in 1996 the corresponding share was 79 percent.

For wood pulp capacity expansion, the *fastest growing region* is expected to be Asia and particularly Indonesia. In the paper industry, expansion will also be fastest in Asia and particularly Malaysia. The *slowest region*, both for pulp and paper, is expected to be Africa excluding South Africa. Semi-chemical pulp is expected to be the *fastest growing type* of pulp and printing grade for paper.

Wood Pulp For Paper Making (Table 3)

During 1996-2001, the capacity of the wood pulp industry is expected to recover somewhat after the marked decline experienced during 1991-1996 when the industry in countries of Eastern Europe and the former USSR suffered severe dislocation. In these countries, many pulp mills had to be closed as, in the new market-economy environment, they were obsolete, uneconomic or faced difficulties in obtaining raw materials. According to current plans, the period 1996-2001 should witness a recovery of capacity from previous lows, for wood pulp as well as for paper and paperboard. In other *developed countries*, notable pulp capacity expansions are also planned in the Nordic countries and in Oceania which are expected to grow by an annual growth of 2.1 percent and by 4.3 percent, respectively. The *developing countries* are expected to continue expanding capacity but somewhat slower than their previous particularly rapid rates. Their projected growth is expected to be an annual 5.8 percent compared to the 8.4 percent of the 1991-96 period.

Mechanical Wood Pulp (Table 4)

World mechanical wood pulp capacity is predicted to have zero growth in the period 1996-2001 after the declines experienced in the previous periods. No growth is planned for the *developed countries* as a whole. However, the planned increase in capacity in Eastern Europe (the highest in the developed countries especially Romania), in the EEC and in the Nordic countries (especially Finland) is expected to compensate for the decline foreseen for Canada, which is planning to reduce capacity by some 0.3 million mt. An increase in capacity of 0.5 percent is predicted in the *developing countries*, mainly in Asia and a decline is predicted in Latin America of 0.7 percent mainly in Chile.

Thermo-Mechanical Wood Pulp (Table 5)

World-wide capacity of thermo-mechanical wood pulp is expected to increase annually by 1.8 percent during 1996-2001, well below the previous strong growth. It is important to note that thermo-mechanical pulp has seen the most rapid capacity increase of all pulps in recent years: installed capacity jumped from 6 million mt in 1981 to some 27 million mt in 1996. The *developed countries*, where most of the capacity is located, are planning to increase it also by 1.6 percent with the highest increase planned in Sweden at 3.9 percent annual growth. For the period 1996-2001 Canada, Finland and Japan are planning to increase their capacity by more than 1.2 million mt. On the other hand, capacity in the *developing countries* is predicted to grow by 7.3 percent annually with the highest growth in Latin America, at 10.1 percent. All other regions, both developed and developing, are predicted to experience marked slow down in their growth.

Semi-Chemical Wood Pulp (Table 6)

The world capacity of semi-chemical wood pulp is expected to recover in 1996-2001, halting a long-term downward trend. Its total annual increase is predicted to be 1.9 percent. In the *developed countries*, the rate is expected to be 1.9 percent, with the highest growth in Eastern

Europe, at 5 percent annually. A doubling of capacity, based on coniferous wood, is projected to take place in Australia and Romania. An annual rate of expansion of 1.7 percent is foreseen in the *developing countries* with the highest growth being in Asia, where the annual increase will be about 2.3 percent.

Chemical Wood Pulp (Table 7)

World capacity of chemical wood pulp is expected to rise moderately in the period 1996-2001, by some 1.7 percent annually. In the *developed countries*, which are predicted to grow annually by 0.8 percent, the highest expansion is planned in Oceania, at 6.6 percent and particularly in Australia. Notable expansions are also planned in the Nordic countries which are predicted to increase their capacity by 1.3 million mt, mainly in Finland and Sweden and to a lesser extent Germany. The *developing countries*, although growing more slowly than in previous periods, are planning to increase capacity of chemical wood pulp by 6.5 percent annually with strong expansion in Asia, by 8.7 percent annually and particularly Indonesia which will more than double its capacity of non-coniferous wood pulp by the year 2001 to reach 5.7 million mt, Chile, Brazil and Colombia are also planning notable expansions of capacity, with an overall growth of 10.3 percent, 4.3 percent and 13.3 percent respectively. Africa (excluding South Africa) is predicted to have the slowest growth among developing regions, with an annual rate of 0.3 percent.

Other Fibre Pulp (Table 8)

The other fibre pulp industry is almost exclusively located in the *developing countries* where 1996 capacity stood at some 21 million mt, out of a world total of 22.4 million mt. Plans for the period 1996-2001 indicate an annual increase in capacity of 1.4 percent. Almost all the expansion is planned in China, with most of the pulp being straw. Capacity in the *developed countries*, is predicted to grow by an annual 2.9 percent most of their increase will be in France where capacity will jump from a current level of 2.000 mt. to 150.000 mt in 1998.

Dissolving Pulp (Table 9)

World capacity of dissolving pulp is predicted to recover slightly, increasing annually by 0.6 percent - after a long period of decline. Capacity in the *developing countries* is predicted to grow annually by 2.1 percent with the fastest growth in Latin America, mainly in Brazil. The corresponding annual growth in the *developed countries* is predicted to be 0.2 percent, with the strongest growth in the EEC, at 5.7 percent annually, and a notable expansion in Germany.

Market Pulp

The world capacity for market wood pulp production was estimated at 43.9 million tons in 1996, with the indication of an increase to 46.1 million tons by 1999. The regional distribution was 20 million tons in North America, 6.5 million tons in the Nordic countries, 4.6 million tons in the EEC and the rest of Europe, 5 million tons in Latin America, 0.7 million tons in Oceania, 2.4 million tons in developing Asia, and 0.4 million tons in developing Africa.

Paper and Paperboard (Table 10)

For 1996-2001, the paper and paperboard industry has a lower planned capacity expansion rate than that experienced in previous periods, although it will still increase. The *developed countries* are predicted to benefit from the expected recovery of the paper industry in Eastern Europe and in the Nordic countries which have, in previous years, seen a decrease in their capacities. However, although decreasing, from 1.9 percent annual growth to 1.5 percent, capacity growth of the developed countries is expected to be well below that of the developing countries. The paper and paperboard industry capacity in *developing countries* will continue to grow but at a notably slower pace than in the past. During the previous period, in fact, they enjoyed an annual growth of 6.8 percent; during the next period the annual growth is expected to be halved, to 3 percent.

Newsprint (Table 11)

Capacity for newsprint in 1996-2001 is predicted to grow annually by 1.4 percent. Growth in planned capacity during 1996-2001 is expected to be marginal for *developed countries*, some 0.6 percent annually and mainly located in Japan and some EEC countries (France, Sweden, Spain), the highest regional growth. A much stronger increase is expected in the *developing countries* where plans for newsprint capacity show to grow at some 5.8 percent annually during 1996-2001, a decline of the growth rate from the previous period. Significant capacity expansions are planned in Asia, notably in Malaysia, the Republic of Korea, Indonesia and Thailand as well as Latin America, mainly Brazil and Chile. No growth is predicted for Africa, excluding South Africa.

Printing and Writing (Table 12)

Capacity for printing and writing paper which increased very rapidly during previous periods, is expected to grow more slowly during 1996-2001, with the annual increase being 2.5 percent. However, this industry is predicted to still maintain the highest rate of growth of capacity (at global level) for the whole pulp and paper industry. The *developed countries* are predicted to achieve an annual rate of increase in capacity of 2.4 percent, slightly below the previous growth rate. Major expansions are planned in Eastern Europe, the highest regional growth, at 7.6 percent annually. A notable capacity increase is also predicted for the Nordic countries, but lower to their previous rate of growth. The rate of increase in capacity in the *developing countries* is predicted to slow down considerably, from 7.8 percent during 1991-1996 to some 3.0 percent annually. Among the regions, Asia is predicted to enjoy the fastest growth, 3.7 percent annually, with China and Indonesia planning to expand capacity strongly by 0.8 million mt and 0.6 million mt, respectively.

Other Paper and Paperboard (Table 13)

As for printing and writing grades, the increase in capacity of other paper and paperboard is expected to slow down during 1996-2001. Planned increase in world capacity will result in a 1.6 percent annual growth rate, down from the 2.7 percent of the previous period. The *developed countries* are predicted to increase capacity by 1.2 percent annually, slightly above the previous period. A notable recovery of capacity is planned in Eastern and Nordic countries, the fastest growing region. Major expansions are also planned for Oceanian countries, up by 2.6 annually. The *developing countries*, on the other hand, are expected to experience a marked slow down in the rate of increase of their previous strong expansion. Their annual increase is predicted to be 2.7 percent, well below the previous 6.3 percent. The notable exceptions to this predicted slow down are two Latin American countries, Brazil and Mexico, which plan to increase capacity each by 0.4 million mt. However Asia is predicted to maintain the highest growth among developing countries.

Capacity Ratio: Pulp for Paper to Paper and Paperboard (Table 14)

The apparent ratio of capacity to produce pulp for paper (wood pulp plus pulp of other fibre) to the capacity to produce paper and paperboard is 65.3 percent in 1996 and falls to 64.3 percent in 2001. This decline reflects an increasing use of recovered paper and fillers such as clay, especially in the last ten years.

Comparison with Earlier Surveys (Tables 15+16)

In Table 15, the estimate of total capacity in the first year of each Survey and the estimated increase over the period is shown. It should be noted that data published in the 1980, 1981 and 1982 Surveys were subsequently revised to include country returns received too late to be included. Data for 1982, 1983 and 1991 include the revision of data for China. Data for 1993 include the revision of data for India.

Capacity Utilisation (Table 17)

For countries reporting production and capacity for 1996, the ratio indicating apparent capacity utilisation is shown.

World development of capacity is illustrated in tables 1-17 and in figures 1-12 on pages XXIII-XXXVIII.

ENQUETE DE LA FAO SUR LA CAPACITE MONDIALE DE PRODUCTION DE PATE ET DE PAPIER 1996-2001

par le Secrétariat

Les recensements annuels FAO des capacités mondiales de production de pâte et de papier se fondent sur les chiffres envoyés en début d'année par les correspondants de nombreux pays du monde, ainsi que sur des estimations du Secrétariat pour les autres pays. Dans la plupart des cas, les données sont fournies par les associations professionnelles nationales du secteur de la pâte et du papier. Les renseignements concernant les projets de développement pour le futur sont obtenus auprès des compagnies elles-mêmes en moyenne environ six mois avant que les données ne soient communiquées à la FAO. En conséquence, les résultats reflètent les opinions et les prévisions des industries du secteur au milieu de la première année de la période couverte. Des changements ultérieurs des conditions économiques, financières et commerciales peuvent entre-temps avoir modifié leurs projets et leurs prévisions. Pour l'étude 1996-2001, de nouvelles estimations nous sont parvenues à temps pour 36 pays. Pour les autres, on a conservé les estimations de l'enquête 1995-2000, en reprenant pour 2001 les chiffres donnés pour 2000.

La couverture et le contenu de l'étude sont les mêmes que l'année dernière. Les données ont été classées et traitées sur ordinateur, et on a utilisé un questionnaire informatisé. La présentation des données est caractérisée par les points suivants:

- (i) Les tableaux par pays pour la pâte et le papier sont présentés chacun sur une page.
- (ii) Les tableaux régionaux reproduisent tous les détails donnés dans les tableaux par pays. En outre, ces tableaux indiquent, pour chaque groupe de produits, le volume pour lequel on ne connaît pas la ventilation détaillée par produit spécifique. On voit ainsi tout de suite la portée de l'information détaillée.
- (iii) Les tableaux par produit indiquent la capacité de production par pays, pour tous les produits et groupes de produits codés. Ils y figurent dans l'ordre du numéro de code.

Les pays suivants ont fourni des données à temps pour que l'on puisse en tenir compte: Afrique du Sud, Allemagne, Australie, Autriche, Bolivie, Brésil, Canada, Chili, Colombie, Corée (République de), Danemark, El Salvador, Espagne, Etats-Unis d'Amérique, Fédération de Russie, Finlande, France, Hongrie, Italie, Jamaïque, Japon, Malaisie, Maroc, Mexique, Myanmar, Norvège, Nouvelle-Zélande, Pakistan, Pays-Bas, Portugal, République Dominicaine, République Tchèque, Royaume Uni, Suède, Suisse et la Thaïlande. Ces 36 pays représentent 85 pour cent de la capacité mondiale. Les réponses des pays en développement couvraient 35 pour cent de leur capacité totale de production. Les données relatives à la Chine excluent la province de Taïwan. Les données relatives à l'ancienne URSS concernent seulement la Fédération de Russie.

Les correspondants nationaux qui ont renvoyé le questionnaire FAO, en temps utile, pour l'inclusion de leurs données dans la publication "Capacités de la Pâte et du Papier, enquête 1996-2001, sont indiquées dans l'annexe 1. RESUME

Les principales conclusions de l'enquête 1996-2001 sont les suivantes:

Les tendances (tableaux 1 et 2)

Pendant la période 1996-2001, il est prévu que la capacité industrielle augmente de 1,5 pour cent par an pour la pâte de bois et de 1,8 pour cent par an pour le papier et le carton. Ces taux de croissance sont tous les deux inférieurs à ceux qui étaient annoncés dans l'étude de 1995-2000. La capacité mondiale totale devrait atteindre, en l'an 2001, 197 millions de tonnes pour la pâte de bois et 344 millions de tonnes pour le papier et le carton.

Sur les 197 millions de tonnes de capacité totale prévus pour la pâte de bois en l'an 2001, les pays développés (qui comprennent l'ex-URSS et les pays d'Europe centrale et orientale en transition) assureront 85 pour cent et les pays en développement le reste; en 1996, le chiffre correspondant était de 88 pour cent. Sur les 344 millions de tonnes prévus pour le papier et le carton, les pays développés compteront pour 77 pour cent tandis qu'en 1996, la proportion correspondante était de 79 pour cent.

En ce qui concerne l'accroissement de la capacité de la pâte de bois, *la région à croissance la plus rapide* devrait être l'Asie, et en particulier l'Indonésie. Dans l'industrie du papier, c'est en Asie également que l'expansion sera la plus rapide et en particulier en Malaisie. *La région à croissance la plus lente* pour la pâte comme pour le papier, devrait être l'Afrique, exception faite de l'Afrique du Sud. La pâte mi-chimique serait le type de pâte à *croissance la plus rapide* tandis que, pour le papier, ce serait le papier d'impression.

Pâte de bois pour papiers et cartons (tableau 3)

Pendant la période 1996-2001, la capacité de l'industrie de la pâte de bois devrait récupérer quelque peu, après le net recul enregistré en 1991-1996 du fait du profond bouleversement de l'industrie des pays de l'Europe orientale et de l'ex-URSS. Dans ces pays, de nombreuses usines de cellulose ont dû être fermées car, dans le contexte nouveau de l'économie de marché, elles étaient obsolètes et non rentables, ou bien avaient des difficultés pour obtenir des matières premières. Selon les plans actuels, une reprise de la capacité par rapport aux niveaux très bas précédents devrait être enregistrée pendant la période 1996-2001 pour la pâte de bois ainsi que pour le papier et le carton. Dans les autres *pays développés*, un développement notable de la capacité de la pâte est également prévu dans les pays scandinaves et en Océanie, qui devraient progresser au rythme de 2,1 pour cent par an et de 4,3 pour cent, respectivement. La capacité des *pays en développement* devrait continuer à augmenter, avec cependant un rythme d'expansion un peu plus lent que les rythmes précédents, particulièrement rapides. La croissance prévue serait de 5,8 pour cent par an, contre les 8,4 pour cent de la période 1991-1996.

Pâte de bois mécanique (tableau 4)

La capacité mondiale de la pâte de bois mécanique ne devrait pas s'accroître pendant la période 1996-2001, après les reculs enregistrés au cours des périodes précédentes. Dans les *pays développés*, aucune croissance n'est prévue dans l'ensemble. Cependant, l'accroissement de la capacité annoncé pour l'Europe orientale (le plus important des pays développés en particulier la Roumanie), la CEE et les pays scandinaves (en particulier la Finlande) devrait compenser le déclin du Canada, qui prévoit de réduire sa capacité de quelque 0,3 million de tonnes. Une augmentation de 0,5 pour cent est annoncée dans les *pays en développement*, essentiellement en Asie, et une diminution de 0,7 pour cent est prévue pour l'Amérique latine, notamment au Chili.

Pâte de bois thermo-mécanique (tableau 5)

La capacité mondiale de la pâte de bois thermo-mécanique devrait progresser de 1,8 pour cent par an pendant la période 1996-2001, ce qui est largement inférieur à la forte croissance précédente. Il est important de noter que la pâte thermo-mécanique a enregistré, ces dernières années, l'accroissement le plus rapide de toutes les pâtes; la capacité installée a fait un bond, passant de 6 millions de tonnes en 1981 à quelque 27 millions de tonnes en 1996. Les *pays développés*, où est située la majeure partie de la capacité, projettent également de la développer au rythme de 1,6 pour cent par an, la hausse la plus importante étant prévue pour la Suède (3,9 pour cent par an). Pour la période 1996-2001, le Canada, la Finlande et le Japon envisagent d'accroître leur capacité de 1,2 million de tonnes. Par ailleurs, dans les *pays en développement*, elle devrait progresser de 7,3 pour cent par an, la croissance la plus forte étant attendue en Amérique latine (10,1 pour cent). Toutes les autres régions, pays développés et pays en développement, devraient enregistrer un net ralentissement de leur croissance.

Pâte de bois semi-chimique (tableau 6)

Pour la pâte de bois semi-chimique, un relèvement de la capacité mondiale est prévu pendant la période 1996-2001, ce qui mettra fin à une tendance prolongée à la baisse. Sa progression totale annuelle devrait être de 1,9 pour cent. Dans les *pays développés*, le taux serait de 1,9 pour cent, la croissance la plus forte étant le fait de l'Europe orientale (5 pour cent par an). Un doublement de la capacité (bois d'essences non conifères) est prévu en Australie et en Roumanie. Dans les *pays en développement*, le taux annuel d'expansion devrait être de 1,7 pour cent, la plus forte croissance étant attendue en Asie (environ 2,3 pour cent par an).

Pâte de bois chimique (tableau 7)

Pour la pâte de bois chimique, un accroissement mondial modéré est prévu pour la période 1996-2001 (environ 1,7 pour cent par an). Dans les *pays développés*, où la croissance annuelle devrait atteindre 0,8 pour cent, l'expansion la plus importante est attendue en Océanie (6,6 pour cent), et en particulier en Australie. Des progressions notables sont également annoncées dans les pays scandinaves qui devraient augmenter leur capacité de 1,3 million de tonnes, surtout en Finlande, en Suède et dans une moindre mesure en Allemagne. Les *pays en développement*, où la hausse sera cependant plus lente qu'au cours des périodes précédentes, prévoient d'augmenter leur capacité pour la pâte de bois chimique de 6,5 pour cent par an, avec une forte expansion en Asie (8,7 pour cent par an) et en particulier en Indonésie, dont la capacité de production de pâte de bois non conifère aura plus que doublé en l'an 2001, atteignant 5,7 millions de tonnes. Le Chili, le Brésil et la Colombie prévoient également d'accroître notablement leur capacité, avec une croissance globale de 10,3, de 4,3 et de 13,3 pour cent respectivement. L'Afrique (en dehors de l'Afrique du Sud) devrait enregistrer la croissance la plus lente parmi les régions en développement (0,3 pour cent par an).

Pâte d'autres fibres (tableau 8)

L'industrie de la pâte d'autres fibres est presque exclusivement située dans les *pays en développement*, où la capacité s'élevait en 1996 à quelque 21 millions de tonnes sur un total mondial de 22,4 millions de tonnes. Pour la période 1996-2001, les prévisions indiquent un accroissement annuel de la capacité de 1,4 pour cent. Cette hausse sera presque entièrement le fait de la Chine, où la majeure partie de la pâte sera tirée de la paille. La capacité des *pays développés* devrait augmenter de 2,9 pour cent par an, principalement en France où elle passera du niveau actuel de 2,000 mt à 150,000 mt en 1998.

Pâte soluble (tableau 9)

Pour ce qui est de la pâte soluble, la capacité mondiale devrait remonter légèrement, avec une augmentation annuelle de 0,6 pour cent, après une longue période de déclin. Il est prévu que la capacité des *pays en développement* progresse annuellement de 2,1 pour cent, la croissance la plus rapide étant attendue en Amérique latine, surtout au Brésil. La croissance annuelle correspondante dans les *pays développés* devrait être de 0,2 pour cent, la plus forte augmentation étant prévue dans la CEE (5,7 pour cent par an) ainsi qu'une expansion notable en Allemagne.

Pâte marchande

La capacité mondiale de production de pâte marchande est estimée à 43,9 millions de tonnes en 1996, et l'on prévoit une augmentation en 1999, ce qui porterait ce chiffre à 46,1 millions de tonnes. Par région, les chiffres sont les suivants: 20 millions de tonnes en Amérique du Nord, 6,5 millions de tonnes dans les Pays Nordiques, 4,6 millions de tonnes dans la CEE et le reste de l'Europe, 5 millions de tonnes en Amérique latine, 0,7 million de tonnes en Océanie, 2,4 millions de tonnes dans les pays en développement de l'Asie et 0,4 million de tonnes dans les pays en développement d'Afrique.

Papiers et cartons (tableau 10)

Pour 1996-2001, le rythme d'accroissement prévu pour la capacité de l'industrie du papier et du carton est plus lent que celui des périodes précédentes; cependant, il continuera à augmenter. Les *pays développés* devraient bénéficier de la reprise prévue pour l'industrie du papier en Europe orientale et dans les pays nordiques, où un recul avait été enregistré les années précédentes. Cependant, même si le taux de croissance de la capacité diminue dans les pays développés de 1,9 pour cent par an à 1,5 pour cent, il devrait être largement inférieur à celui des pays en développement. La capacité de l'industrie du papier et du carton dans les *pays en développement* continuera à progresser, mais à un rythme sensiblement plus lent que dans le passé. En effet, pendant la période précédente, ces pays ont enregistré un taux annuel de croissance de 6,8 pour cent; pendant la prochaine période, la croissance annuelle devrait être réduite de moitié, passant à 3 pour cent.

Papier journal (tableau 11)

Pour le papier journal, il est prévu que la capacité augmente de 1,4 pour cent par an pendant la période 1996-2001. La croissance de la capacité planifiée pour la période 1996-2001 devrait être marginale dans les *pays développés*, avec quelque 0,6 pour cent par an essentiellement au Japon et dans certains pays de la CEE (France, Suède, Espagne), qui connaîtront la hausse régionale la plus forte. Un progrès beaucoup plus net est prévu dans les *pays en développement*, où les projections pour la capacité du papier journal correspondent à une croissance d'environ 5,8 pour cent par an pendant la période 1996-2001, une réduction du taux de la période précédente. Des expansions significatives de la capacité sont attendues en Asie, et notamment en Malaisie, dans la République de Corée, en Indonésie et en Thaïlande ainsi qu'en Amérique latine, notamment au Brésil et au Chili. Aucune croissance n'est prévue en Afrique, exception faite de l'Afrique du Sud.

Papier d'impression et d'écriture (tableau 12)

Pour le papier d'impression et d'écriture, la capacité, qui a progressé très rapidement pendant les périodes précédentes, devrait augmenter plus lentement pendant la période 1996-2001, avec un accroissement annuel de 2,5 pour cent. Cependant, cette industrie devrait maintenir le taux très élevé de croissance de la capacité (au niveau mondial) pour l'ensemble de la pâte et du papier. Dans les *pays développés*, la capacité devrait progresser de 2,4 pour cent par an, soit légèrement moins que le taux de croissance précédent. Les expansions majeures sont prévues en Europe orientale, où la croissance régionale sera la plus forte (7,6 pour cent par an). Un accroissement notable, inférieur au taux précédent, est également attendu dans les pays scandinaves. Dans les *pays en développement*, le rythme d'accroissement de la capacité devrait se ralentir considérablement, passant de 7,8 pour cent pendant la période 1991-1996 à quelque 3 pour cent par an. Parmi les diverses régions, l'Asie devrait connaître la croissance la plus rapide (3,7 pour cent par an), la Chine et l'Indonésie prévoyant d'augmenter fortement leur capacité (de 0,8 million de tonnes et de 0,6 million de tonnes, respectivement).

Autres papiers et cartons (tableau 13)

Comme pour les qualités de papier d'impression et d'écriture, le développement de la capacité des autres papiers et cartons devrait se ralentir pendant la période 1996-2001. L'accroissement prévu au niveau mondial sera de 1,6 pour cent par an, contre 2,7 pour cent pendant la période précédente. Les *pays développés* devraient accroître leur capacité de 1,2 pour cent par an, soit légèrement plus que pendant la période précédente. Un redressement notable est prévu en Europe orientale et dans les pays nordiques, région où la croissance est la plus rapide. Des expansions importantes sont également attendues dans les pays de l'Océanie, jusqu'à 2,6 pour cent. D'autre part, les *pays en développement* devraient enregistrer un net fléchissement du taux d'accroissement de leur capacité par rapport à sa forte expansion précédente. Leur progrès annuel atteindrait 2,7 pour cent par an, ce qui est largement inférieur aux 6,3 pour cent précédents. Il y a deux exceptions notables à ce ralentissement: deux pays d'Amérique latine, le Brésil et le Mexique, prévoient de développer chacun leur capacité de 0,4 million de tonnes. C'est cependant l'Asie qui devrait conserver le taux de croissance le plus élevé parmi les pays en développement.

Rapport entre la capacité de pâte pour papier et la capacité de papiers et cartons (tableau 14)

Le rapport apparent entre la capacité de la pâte pour papier (pâte de bois plus pâte d'autres fibres) et la capacité de papier et carton, qui était de 65,3 pour cent en 1996, devrait tomber à 64,3 pour cent en 2001. Ce déclin reflète un usage majeur de vieux papiers et d'additifs tels que l'argille, en particulier dans les dix dernières années.

Comparaison avec les enquêtes précédentes (tableaux 15+16)

Le tableau 15 donne l'estimation de la capacité totale pendant la première année de chaque enquête et l'estimation de l'augmentation pendant la période étudiée. Il convient de noter que les données publiées dans les enquêtes pour 1980, 1981 et 1982 ont été révisées ultérieurement, certains pays ayant communiqué trop tard leurs statistiques pour qu'il soit possible d'en tenir compte. Les statistiques pour 1982, 1983 et 1991 tiennent compte des données fournies par la Chine et les statistiques pour 1993 tiennent compte des données fournies par l'Inde.

Utilisation de la capacité installée (tableau 17)

Pour les pays qui rapportent la production et l'utilisation de la capacité installée pour 1996, le ratio montrant l'utilisation apparente de la capacité installée est indiqué.

Les tableaux 1 à 17 et les figures 1 à 12 illustrent le développement de la capacité mondiale de production de pâte et de papier (pages XXIII-XXXVIII).

INFORME SOBRE LA ENCUESTA DE LA FAO RELATIVA A LA CAPACIDAD DE PRODUCCIÓN MUNDIAL DE PASTA Y PAPEL 1996-2001

elaborado por la Secretaría

Las encuestas anuales de la FAO sobre la capacidad mundial de producción de pasta y papel se basan en los datos recibidos de los corresponsales en muchos países al comenzar el año de la publicación y en las estimaciones que hace la Secretaría en relación con los demás países. En la mayoría de los casos, los datos los facilitan las asociaciones nacionales de comerciantes de pasta y papel. La información sobre los planes futuros de desarrollo se obtiene de las empresas, por término medio unos seis meses antes de que se comunique a la FAO. En consecuencia, los resultados recogen la opinión y las expectativas de la industria a mediados del primer año sobre el cual se informa. Es posible que, entretanto, los cambios subsiguientes en las condiciones económicas, financieras y del mercado hayan dado lugar a cambios en los planes y expectativas. En el caso de la presente encuesta de 1996-2001, se han recibido, a tiempo para su inclusión, nuevas estimaciones de 36 países. En relación con los restantes países se han repetido las de la encuesta de 1995-2000 y las de 2001 se han considerado iguales a las de 2000.

El ámbito y el contenido de la encuesta son idénticos a los del año pasado. Los datos se han almacenado y elaborado en computadores, y en la encuesta se ha utilizado un cuestionario preparado con computadora. Caben señalar las siguientes características de la presentación:

- (i) Se presentan en una página los cuadros relativos a la pasta y papel por países.
- (ii) Los cuadros por regiones incluyen todos los detalles de los cuadros por países. Además, estos cuadros muestran para cada suma de productos el volumen respecto del cual no se dispone de ningún desglose detallado ulterior de los productos que abarca. Esto indica inmediatamente el alcance de los detalles que proporciona el desglose.
- (iii) Los cuadros por productos indican el volumen de la capacidad de producción por países en relación con cada producto y el código de la suma de productos. Se consignan por orden numérico de códigos.

Los datos recibidos a tiempo para ser incluidos en la actualización corresponden a los países siguientes: Alemania, Australia, Austria, Bolivia, Brasil, Canadá, Chile, Colombia, Dinamarca, El Salvador, España, Estados Unidos de América, Federación Rusa, Finlandia, Francia, Hungría, Italia, Jamaica, Japón, Malasia, Marruecos, México, Myanmar, Noruega, Nueva Zelandia, Países Bajos, Pakistán, Portugal, Reino Unido, República Checa, República de Corea, República Dominicana, Sudáfrica, Suecia, Suiza y Tailandia. Estos 36 países representan el 85 por ciento de la capacidad mundial de producción. Los datos correspondientes a las economías en desarrollo de mercado abarcan el 35 por ciento de su capacidad total de producción. En esta edición los datos referentes a China han sido revisados y excluyen la capacidad de la provincia de Taiwan. Los datos estadísticos de la ex-Unión Soviética se refieren solo a la actual Federación Rusa.

Los corresponsales nacionales, que enviaron el cuestionario FAO, a tiempo, para la publicación "Capacidades de pasta y papel estudio 1996-2001" están listadas en el Anexo 1. Esta publicación es el resultado de la contribución de las asociaciones nacionales y es apreciable su deseo de compartir e intercambiar datos. RESUMEN

Las principales conclusiones de la encuesta 1996-2001 son las siguientes:

Tendencias (cuadros 1 y 2)

Durante el periodo de 1996-2001, las proyecciones son que la capacidad industrial aumentará a una tasa anual del 1,5% para la Pasta de madera y un 1,8% para el Papel y el cartón. Estas dos tasas de crecimiento son menores a las previstas en el estudio de 1995-2001. Según pronósticos, la capacidad mundial total para la Pasta de madera en el año 2001 será de 197 millones de toneladas, y la de Papel y cartón de 344 millones de toneladas.

Del total de 197 millones de toneladas de capacidad de pasta de madera proyectada para el año 2001, los países desarrollados (que incluyen a la anterior URSS y a los países de Europa central y oriental en transición a la economía de mercado) supondrán un 85 por ciento y los países en desarrollo el resto; en 1996, el porcentaje respectivo era del 88 por ciento. De la capacidad proyectada en 344 millones de toneladas de papel y cartón, los países desarrollados contribuirán a un 77 por ciento mientras que en 1996 su proporción era del 79 por ciento.

En cuanto a expansión de la capacidad de pasta de madera, se prevé que *la región de crecimiento más rápido* será Asia y especialmente Indonesia. En la industria del papel, la expansión será también muy rápida en Asia y especialmente Malasia. *La región de crecimiento más lenta* tanto por lo que se refiere a la pasta como al papel, será, según previsiones, África, excluida Sudáfrica. Las previsiones son que la pasta semiquímica será el tipo de pasta y de papel para imprenta *de más rápido crecimiento*.

Pasta de madera para la fabricación de papel (cuadro 3)

Se espera que, durante 1996-2001, la capacidad de la industria de la pasta de madera se recupere algo después de la baja del mercado experimentada durante 1991-1996, cuando la industria de los países de Europa oriental y de la antigua URSS sufrió graves trastornos. En estos países, tuvieron que cerrarse muchas fábricas de pasta ya que en las nuevas circunstancias de economía de mercado, se habían quedado obsoletas, resultaban antieconómicas o tropezaban con dificultades para obtener materia prima. Según los planes actuales, en el periodo de 1996-2001 habría una recuperación de capacidad respecto de las bajas anteriores, tanto para la pasta de madera como para el papel y el cartón. En otros países desarrollados, también se prevén notables expansiones de la capacidad de pasta en los países nórdicos y en Oceanía que, según pronósticos, crecerán a una tasa anual del 2,1 por ciento y del 4,3 por ciento, respectivamente. Se prevé que los países en desarrollo sigan ampliando su capacidad pero con algo más lentamente y no a las tasas especialmente rápidas de antes. Se prevé que su crecimiento proyectado será de un 5,8 por ciento anual frente al 8,4 por ciento del periodo de 1991-96.

Pasta mecánica de madera (cuadro 4)

La capacidad mundial de pasta mecánica de madera no crecerá, según previsiones, durante el periodo de 1996-2001 después de las bajas registradas en los periodos anteriores. No se proyecta ningún crecimiento para los países desarrollados en su conjunto. No obstante, el aumento proyectado de capacidad en Europa oriental (el máximo de los países desarrollados especialmente Rumania), en la CEE y en los países nórdicos (especialmente Finlandia), compensará, según se prevé, el descenso que se pronostica para Canadá, que está haciendo planes para reducir su capacidad en 0,3 millones de toneladas. Se predice un aumento de capacidad del 0,5 por ciento en los países en desarrollo, sobre todo en Asia y se pronostica una reducción en América Latina de 0,7 por ciento, principalmente en Chile.

Madera termomecánica (cuadro 5)

Se prevé que la capacidad mundial de pasta de madera termomecánica aumentará anualmente en un 1,8 por ciento durante 1996-2001, bastante por debajo del fuerte crecimiento previo. Es importante señalar que la pasta termomecánica ha experimentado el aumento de capacidad más rápido de todas las pastas en estos últimos años: la capacidad instalada saltó de 6 millones de toneladas en 1981 a unos 27 millones en 1996. Los países desarrollados, donde se halla situada la mayor parte de la capacidad, piensan aumentarla también en un 1,6 por ciento, proyectándose el máximo aumento en

Suecia, con un 3,9 por ciento anual de crecimiento. Para el período de 1996-2001, Canadá, Finlandia y Japón proyectan aumentar su capacidad en más de 1,2 millones de toneladas. Por otra parte, la capacidad de los países en desarrollo crecerá, según predicciones, en un 7,3 por ciento anual, correspondiendo el mayor crecimiento en América Latina, con un 10,1 por ciento. Todas las demás regiones, tanto desarrolladas como en desarrollo, experimentarán, según pronósticos, una notable reducción de su tasa de crecimiento.

Pasta semiquímica de madera (cuadro 6)

La capacidad mundial de pasta semiquímica de madera se recuperará, según se prevé, en 1996-2001, con lo que se frenará una larga tendencia descendente. Su aumento anual total será, según previsiones, del 1,9 por ciento. En los países desarrollados se espera que el ritmo sea del 1,9 por ciento, con el máximo crecimiento en Europa oriental, cifrado en un 5 por ciento anual. Una duplicación de capacidad, basada en la madera de no coníferas, tendrá lugar, según se prevé, en Rumania. Se pronostica una tasa anual de expansión del 1,7 por ciento en los países en desarrollo, correspondiendo el máximo crecimiento a Asia, donde el incremento anual será de un 2,3 por ciento.

Pasta química de madera (cuadro 7)

Se espera que la capacidad mundial de pasta química de madera aumente moderadamente en el período de 1996-2001, en un 1,7 por ciento anual. En los países desarrollados, que según pronósticos crecerán anualmente un 0,8 por ciento, la máxima expansión es la proyectada en Oceanía, con un 6,6 por ciento y sobre todo en Australia. También se proyectan notables expansiones en los países nórdicos, que según se predice, aumentarán su capacidad en 1,3 millones de toneladas, principalmente en Finlandia y Suecia y en menor grado en Alemania. Los países en desarrollo, aunque con un crecimiento más lento que en períodos anteriores, aumentarán su capacidad de pasta química de madera en un 6,5 por ciento anual, según previsiones, con una fuerte expansión en Asia, donde será de un 8,7 por ciento anual y especialmente en Indonesia, que duplicará abundantemente su capacidad de pasta de madera no conífera para el año 2001, llegando a los 5,7 millones de toneladas. Chile, Brasil y Colombia planean también notables expansiones de capacidad, con un crecimiento general del 10,3 por ciento, del 4,3 por ciento y del 13,3 por ciento respectivamente. Los pronósticos son que África (con exclusión de Sudáfrica) tendrá el crecimiento más lento entre las regiones en desarrollo, con una tasa anual del 0,3 por ciento.

Pastas de otras fibras (cuadro 8)

La industria de pastas de otras fibras se halla ubicada casi exclusivamente en los países en desarrollo donde la capacidad para 1996 se cifró en unos 21 millones de toneladas, de un total mundial de 22,4 millones de toneladas. Según los planes correspondientes al período de 1996-2001 habría un aumento anual de capacidad del 1,4 por ciento, bastante inferior a la expansión rápida del período anterior. Se pronostica casi toda esa expansión en China, donde la mayor parte de la pasta será de paja. La capacidad en los países desarrollados crecerá, según previsiones, a un ritmo anual del 2,9 por ciento, el crecimiento principal será en Francia donde la capacidad pasará del actual nivel de 2,000 mt a 150,000 mt en 1998.

Pasta soluble (cuadro 9)

Se pronostica que la capacidad mundial de pasta soluble se recuperará ligeramente, con un aumento anual del 0,6 por ciento, tras un largo período de descenso. El crecimiento anual relativo de los países en desarrollo será, según previsiones, del 2,1 por ciento, dándose un aumento más fuerte en América Latina, principalmente en Brasil. El crecimiento anual correlativo de los países desarrollados será, según previsiones, del 0,2 por ciento, dándose el aumento más fuerte en la CEE, con un 5,7 por ciento anual, y registrándose una notable expansión en Alemania.

Pasta comercial

La capacidad de producción mundial de pasta comercial en 1996 se calculó en 43,9 millones de toneladas, con indicios de un aumento a 46,1 millones de toneladas, en 1999. La distribución regional fue la siguiente: 20 millones de toneladas en América del Norte, 6,5 millones en los países nórdicos, 4,6 millones en CEE y otros países de Europa, 5 millones en América Latina, 2,4 millones en Oceanía y 0,4 millones de toneladas en los países en desarrollo de África.

Papel y cartón (cuadro 10)

Para 1996-2001, a la industria del papel y del cartón se le prevé un menor índice de expansión de capacidad que el que ha tenido en períodos anteriores, aunque éste seguirá aumentando. Según pronósticos, los *países desarrollados* saldrán beneficiados de la recuperación prevista de la industria del papel en Europa oriental y en los países nórdicos, donde en años anteriores se ha registrado una baja en sus capacidades. No obstante, se prevé que el crecimiento de capacidad de los países desarrollados, aunque una disminución, al pasar del 1,9 por ciento de crecimiento anual al 1,5 por ciento, será bastante inferior al de los países en desarrollo. La capacidad de la industria del papel y del cartón en los *países en desarrollo* seguirá creciendo pero a un ritmo bastante inferior al registrado hasta aquí. En el período anterior tuvo un crecimiento anual real del 6,8 por ciento; se prevé que para el período próximo el crecimiento anual se reducirá a la mitad, o sea, al 3 por ciento.

Papel de imprenta (cuadro 11)

La capacidad para papel de imprenta en 1996-2001 crecerá anualmente, según previsiones, un 1,4 por ciento. Se prevé que el crecimiento de la capacidad planificada durante 1996-2001 será marginal para los *países desarrollados*, alrededor de un 0,6 por ciento anual, y que tendrá lugar principalmente en Japón y en algunos países de la CEE (Francia, Suecia, España), donde se registrará el máximo crecimiento regional. Se prevé un aumento mucho más fuerte en los *países en desarrollo*, donde los planes para aumentar la capacidad de papel de imprenta equivalen a un crecimiento en torno a un 5,8 por ciento anual durante 1996-2001, disminuyendo la tasa de crecimiento del período previo. Se proyectan expansiones importantes de capacidad en Asia, y sobre todo en Malasia, la República de Corea, Indonesia y Tailandia. También en la América Latina, principalmente en Brasil y Chile. No se pronostica aumento alguno para África, excepto en Sudáfrica.

Papel de imprenta y de escribir (cuadro 12)

Se prevé que la capacidad para papel de imprenta y de escribir, que aumentó con mucha rapidez durante los períodos anteriores, crecerá más lentamente durante 1996-2001, siendo el aumento anual del 2,5 por ciento. No obstante, según pronósticos esta industria seguirá manteniendo la tasa más alta de crecimiento de capacidad (a nivel mundial) de toda la industria de la pasta y el papel. Las predicciones son que los *países desarrollados* conseguirán una tasa anual de aumento de capacidad del 2,4% (llegando a unos 10,9 millones de toneladas), ligeramente por debajo de la tasa previa de crecimiento. Se proyectan grandes expansiones de capacidad en Europa oriental, donde se registrará el máximo crecimiento regional, con un 7,6 por ciento anual. También se pronostica un notable aumento de capacidad para los países nórdicos, pero menor que su tasa previa de crecimiento. La tasa de aumento de capacidad en los *países en desarrollo* reducirá su ritmo considerablemente, según previsiones, pasando del 7,8 por ciento durante 1991-1996 a un 3 por ciento anual. Entre las regiones, los pronósticos apuntan a que Asia tendrá el crecimiento más rápido, con un 3,7 por ciento anual, donde China e Indonesia proyectan ampliar su capacidad fuertemente en 0,8 millones y 0,6 millones de toneladas, respectivamente.

Otros tipos de papel y cartón (cuadro 13)

Por lo que respecta a las calidades del papel de imprenta y de escribir, el aumento de capacidad de otros tipos de papel y cartón se reducirá, según se prevé, durante 1996-2001. El aumento planificado de capacidad mundial dará lugar a una tasa anual de crecimiento del 1,6 por ciento, con un descenso respecto del 2,7 por ciento del período anterior. Según pronósticos, los *países desarrollados* aumentarán su capacidad en un 1,2 por ciento anual, algo más que el período anterior. Se proyecta una notable recuperación de la capacidad en los países de Europa oriental y en los países nórdicos que es la región de crecimiento más rápido. También se proyectan grandes expansiones para los países de Oceanía, en un 2,6 por ciento anual. Los *países en desarrollo*, por otra parte, experimentarán según se prevé una notable reducción de su tasa de aumento respecto de la fuerte expansión registrada previamente. Se predice un aumento anual del 2,7 por ciento, bastante inferior al 6,3 por ciento anterior. Las excepciones notables a esta reducción pronosticada de la tasa de crecimiento son dos países de América Latina, Brasil y México, que planifican aumentar su capacidad, cada uno en 0,4 millones de toneladas. No obstante, se predice que Asia mantendrá el máximo crecimiento entre los países en desarrollo.

Relación entre capacidad de pasta para papel y capacidad de papel y carton (cuadro 14)

La relación aparente entre la capacidad de producción de pasta para papel(pasta de madera y pastas de otras fibras) y la de papel y cartón es de 65.3 por ciento en 1996, y disminuye a 64.3 por ciento en 2001. Esta disminución refleja, el aumento en el uso de papel de desecho y aditivos tales como arcilla, especialmente en los último 10 años.

Comparación con encuestas anteriores (cuadros 15+16)

En el cuadro 15 figuran la estimación de la capacidad total de producción en el primer año de cada encuesta y el aumento calculado durante todo el período. Cabe señalar que los datos publicados en las encuestas de 1980, 1981 y 1982 se revisaron posteriormente para incluir los datos enviados por algunos países, que se recibieron demasiado tarde para su inclusión. Las cifras de 1982, 1983 y 1991 tienen en cuenta la revisión de los datos correspondientes a China. Las cifras de 1993 tienen en cuenta la revisión de los datos correspondientes a India.

Capacidad de utilización (cuadro 17)

Para los países con información sobre producción y capacidad en 1996, se presenta el grado de utilización aparente de dicha capacidad.

La evolución mundial de la capacidad se ilustra en los cuadros 1 a 17 y en las figuras 1 a 12 (páginas XXIII-XXXVIII).

WORLD SURVEYS OF PULP AND PAPER CAPACITY AND PRODUCTION

DEFINITIONS

CAPACITY

Practical maximum capacity is the tonnage of paper, paperboard or pulp of normal commercial quality that could be produced per year with full use of equipment and adequate supplies of raw materials and labour, and assuming full demand. No allowance is made for losses due to unscheduled shut downs, strikes, temporary lack of power, etc., which cause decreases in actual production, but not in production capacity.

Capacity of paper machines which produce more than one grade is apportioned in accordance with actual production patterns or plans for future operation.

Capacity is reported in metric tons of net finished paper and paperboard, and air-dry (10 per cent moisture content) pulp.

Changes in capacity:

- (i) Increases in capacity for years 1,2 and 3 of the survey should include committed plans for new machines, i.e. those underway, where ground has been broken, machinery ordered, financing obtained etc., as well as increases to existing machines. For years 4 and 5, include pulp and paper expansions which are under active consideration or seem likely to come on stream.
- (ii) Changes in capacity should be included only for the portion of the year which they are actually effective.
 - (a) Additions to capacity.
For new mills and machines, data should reflect the fact that full capacity is only reached after a certain period of operation. For the first 12 months of operation, assume 70 per cent of capacity, the next 12 months 90 per cent and 100 per cent thereafter.
 - (b) Reductions in capacity.
Capacity of machinery which has been closed down mainly for economic reasons, with no intention of resuming production, should be excluded.

DEFINITIONS OF PULP

ENQUETE MONDIALE SUR LA CAPACITE ET LA PRODUCTION DE PATE ET DE PAPIER

DEFINITIONS

CAPACITE

Aux fins de l'enquête, la capacité maximum pratique est égale au tonnage de papier, carton ou pâte de qualité commerciale normale que l'on peut produire annuellement en utilisant pleinement le matériel, en disposant de matières premières et de la main-d'oeuvre en quantité suffisante, étant admis qu'il existe une pleine demande. On ne tient pas compte des pertes dues à des fermetures imprévues, aux grèves, à une manque temporaire de source d'énergie, etc., qui font baisser la production réelle mais non la capacité de production.

La capacité des machines à papier produisant plusieurs qualités est calculée en fonction des régimes de production réelle ou des prévisions concernant le fonctionnement futur.

La capacité est exprimée en tonnes de papier et carton finis nets et de pâte séchée à l'air (10% d'humidité).

Changements de capacité

- (i) Les augmentations de capacité pour les années 1, 2 et 3 de l'enquête doivent inclure des projets définitifs pour l'installation de nouvelles machines, c'est-à-dire, des projets qui sont déjà en cours, dont les fondations ont été jetées, pour lesquels l'équipement a été commandé, ou pour lesquels les fonds ont été assurés etc. Inclure aussi les augmentations des machines existantes. Pour les années 4 et 5, à inclure des expansions de pâte et papier qui sont objets de considération active ou dont l'entrée en fonction est probable.
- (ii) Les changements de capacité ne doivent figurer que pour la partie de l'année où ils se produisent effectivement.
 - (a) Additions

En ce qui concerne les nouvelles usines, les données doivent tenir compte du fait que la pleine capacité n'est atteinte qu'après un certain temps de fonctionnement. Pour les 12 premiers mois de marche, on comptera 70% de la capacité, pour les 12 mois suivants 90% et ensuite 100%.
 - (b) Réductions

Ne pas déclarer la capacité des machines qui ont été arrêtées pour des raisons essentiellement économiques, sans qu'on ait l'intention de reprendre la production.

DEFINITIONS DES PATES

-- La **pâte marchande** comprend la pâte destinée à être mise en vente sur le marché et ne comprend pas la pâte utilisée directement dans une usine intégrée ou destinée à des sociétés filiales ou associées à l'intérieur du pays. Toute pâte exportée en dehors du pays est considérée comme marchande.

1.1 PATES MECANQUES

Pâtes obtenues par le broyage ou le râpage (défibrage) de bois de conifères ou de non-conifères en rondins, morceaux, billes, etc. ou par le raffinage de copeaux de bois de conifères et de non-conifères. Elles sont appelées également "pâtes de bois de râperie" et "pâte mécanique de copeaux". Les billes ou les plaquettes peuvent être prétraitées par un produit chimique approprié pour la fabrication de pâte chimico-mécanique. Pour ce type de pâte, le rapport entre le poids de la pâte produite et celui du bois utilisé est souvent très élevé. Ces pâtes peuvent être écrues ou blanchies.

- **EXCLUANT:** La pâte thermo-mécanique, les pâtes éclatées et défibrées entrant dans la fabrication des panneaux de fibres.

1.11 PATES MECANQUES DE NON-CONIFERES

Pâtes mécaniques obtenues de bois de non-conifères

LA ENCUESTA MUNDIAL DE LA CAPACIDAD DE PRODUCCION DE PASTA Y PAPEL

DEFINICIONES

CAPACIDAD

Capacidad máxima práctica, para los efectos de la encuesta, es el número de toneladas de papel, cartón y pasta, de la calidad comercial corriente, que se podrían producir al año, aprovechando el equipo al máximo y contando con suficiente materia prima y mano de obra, suponiendo que la demanda es capaz de absorber toda la producción. No se toman en cuenta las diferencias que se puedan producir a causa de paros imprevistos, huelgas, interrupciones de la energía eléctrica, etc., todo lo cual se traduce efectivamente en una disminución de la producción aunque no de la capacidad.

Cuando las máquinas producen papeles de varios tipos, se indica la capacidad proporcional que corresponde a cada uno, tanto en la producción actual como en los planes futuros.

La capacidad se expresa en toneladas métricas netas de papel o cartón acabado y de pasta seca al aire (10% de humedad).

Cambios de capacidad

- (i) Los aumentos de la capacidad para los años 1, 2 y 3 de la encuesta deberían incluir planes ya comprometidos para nuevas máquinas, ej.: aquellos comenzados, aquellos donde la tierra ha sido abierta, la maquinaria ordenada, la financiación obtenida, etc., así como incrementos de la maquinaria existente. Para los años 4 y 5, incluir expansiones para pulpa y papel que estén siendo consideradas o que probablemente sean llevadas a cabo.
- (ii) Los cambios de capacidad deben aplicarse solamente a la parte del año en que surtan efecto.
 - (a) Aumentos de capacidad
Tratándose de fábricas y máquinas nuevas, debe tenerse presente que sólo llegan a producir a plena capacidad después de estar en funcionamiento por un cierto tiempo. En los primeros 12 meses siguientes y 100% después.
 - (b) Reducciones de capacidad
No se debe tomar en cuenta la capacidad de aquella maquinaria que se haya parado, por motivos económicos, sin intenciones de volverla a poner en marcha.

DEFINICIONES DE PASTA

- Con el término "**pasta para comercialización**" se indica la pasta destinada a la venta en el mercado libre, excluyendo la pasta utilizada en la propia fábrica o enviada a compañías asociadas o afiliadas dentro del país. Se considera pasta para comercialización toda pasta enviada fuera del país de producción.

The following are some features of the presentation: country tables for pulp and paper are presented on one page; regional tables include all the detail of the country tables; product tables show volume of production capacity by country, for each product and product aggregate code.

Les recensements annuels FAO des capacités mondiales de production de pâte et de papier se fondent sur les chiffres envoyés par les correspondants de nombreux pays du monde, ainsi que sur des estimations du Secrétariat pour les autres pays. Les données ont été classées et traitées sur ordinateur, et on a utilisé un questionnaire informatisé. La présentation des données est caractérisée par les points suivants: les tableaux par pays pour la pâte et le papier sont présentés chacun sur une page; les tableaux régionaux reproduisent tous les détails donnés dans les tableaux par pays; les tableaux par produit indiquent la capacité de production par pays, pour tous les produits et groupes de produits codés.

Las encuestas anuales de la FAO sobre la capacidad mundial de producción de pasta y papel se basan en los datos recibidos de los correspondientes en muchos países y en las estimaciones que hace la Secretaría en relación con los demás países. Los datos se han almacenado y elaborado en computadora, y en la encuesta se ha utilizado un cuestionario preparado con computadora. Cabe señalar las siguientes características de la presentación: los cuadros relativos a la pasta y papel por países se ofrecen en una página; los cuadros por regiones incluyen todos los detalles de los cuadros por países; los cuadros por productos indican el volumen de la capacidad de producción por países, en relación con cada producto y el código de la suma de productos.
