City Region Food System Toolkit

Assessing and planning sustainable city region food systems

Tool/Example: Literature Review Table

Author(s): Sally Miller, Toronto CRFS Project Coordinator
Project: RUAF – Wilfrid Laurier CityFoodTools

Introduction to the joint programme

This tool is part of the City Region Food Systems (CRFS) toolkit to assess and plan sustainable city region food systems. The toolkit has been developed by FAO, RUAF Foundation and Wilfrid Laurier University with the financial support of the German Federal Ministry of Food and Agriculture and the Daniel and Nina Carasso Foundation.

Tool summary:

Brief description	This table provides a list of all the identified available data sources for the Greater Golden Horseshoe and Toronto as well as some national level information.
Expected outcome	Consolidated list of data available across the food chain including web links as appropriate.
Expected Output	This table allows for a more holistic understanding of data availability and gaps for a CRFS.
Scale of application	Project level
Expertise required for application	Project management
Examples of application	Toronto and Greater Golden Horseshoe
Year of development	2015
References	-

Tool description:

This table provides a list of all the identified available data sources for the Greater Golden Horseshoe and Toronto as well as some national level information. The Toronto literature review required approximately 150 hours to complete. It includes the names of reports, publication dates, and website links where available.

MAPS Area of agricultural land for urban/ peri urban/ rural food production	NASA MAPS, Vegetation cover 1. There are two sensors - the MODIS sensor from 2000 to the present at various resolutions - 250m at the native resolution and 5000m aggregated. There are maps for display or for exploration using various viewers developed by the remote sensing community for agriculture: 2. 250m MODIS viewer - lots of features, esp time series analysis MODIS-based time series analysis viewer: 3. Explorer that uses coarse resolution (10km) datasets, but displays NDVI, rainfall, and temperature together 1. MODIS viewer http://pekko.geog.umd.edu/usda/beta/ 2. MODIS-based time series analysis viewer: http://wamis.meraka.org.za/time-series-viewer 3. Coarse resolution Explorer http://earlywarning.usgs.gov:8080/EWX/index.html
	NASA MAPS roads Best source of 'standard' road data is just a GIS package with ESRI files that have vectors for the major roads. In Africa the USGS has a really great GIS layer of roads that actually function and keep it up to date (harder than you'd think) but these are very hard to work with and are frankly not easy to access. Lots of places take the World Bank GIS layers and put them online - see http://www.infrastructureafrica.org/documents/tools/list/arcgis-shape-files?page=11 for the Zambia layers for example. There has been an effort recently in the research community to make gridded files on how long it takes to get to major city (defined as over 50000) which is useful for understanding if a particular place is isolated or not. See http://bioval.jrc.ec.europa.eu/products/gam/index.htm This map is particularly useful in Africa and the mountainous areas of Asia where places are very remote despite being 'near'.
	FAO Geonetwork, Global scale, some country data Administrative and Political Boundaries; Agriculture and Livestock; Applied Ecology; Base Maps, Remote Sensing and Toponymy; Biological and Ecological Resources; Climate; Fisheries and Aquaculture; Forestry; Human Health; Hydrology and Water Resources; Infrastructures; Land Cover and Land Use; Population and Socio-Economic Indicators; Soils and Soil Resources; Topography http://www.fao.org/geonetwork/srv/en/main.home http://harvestchoice.org/products/data Interactive maps and tables; data by country; seems to requires GIS software to

City Region Food System Toolkit

Assessing and planning sustainable city region food systems

PENDING INDICATORS

Extent of food deserts:

Food deserts are defined as urban neighbourhoods and rural towns without ready access to fresh, healthy, and affordable food. Instead of supermarkets and grocery stores, these communities may have no food access or are served only by fast food restaurants and convenience stores that offer few healthy, affordable food options. The lack of access contributes to a poor diet and can lead to higher levels of obesity and other diet-related diseases, such as diabetes and heart disease

Number/% of farms with direct sales

Economic value of produce directly sold to consumers/ from UA/ from CSA/ sold on roadsides

Access to local food by residents from different wealth classes

Number of farm to school/farm to institution/ farm to restaurant programmes

Wage information and number of workers in local distribution organizations

Area of agricultural land under organic/conventional production

Number of food banks/ soup kitchens

Customer preference for local food/ willingness to pay

Proportion of different types of farms (family owned, etc)

Surface (or percentage) area in region per type of crop/product

Tenure on farm

Number of producers who use a locally grown label

Carbon foot print production

Urban, agricultural and recycled water use

Agricultural income versus other sources of income for farmers
